Morgan Leads Charge on Gilts

Big Bang to Its UK Unit Is Government Securities

By JOHN J. DUFFY
London Bureau

LONDON — For Morgan Guaranty Ltd., all the commotion in the stock market here following last Monday's Big Bang has been little more than a sideshow.

THE *Big Bang*

MGL, the merchant banking arm of the Morgan Guaranty Trust Co. of New York, has been keeping a sharp eye on developments in the equities market but, in typical Morgan fashion, it has preferred to let others lead the charge into such uncharted territory. However, drawing on its strength in the international bond markets, it has led the way in another direction.

"Big Bang to us is really U.K. government securities, or gilts," Alfred Vinton, vice chairman of Morgan Guaranty Ltd., said in a recent interview. "Although the big fuss has been largely in equities, the real volume, the real action from our point of view, is gilts."

The gilt market, so called because British government bonds are printed on gilt-edged paper, accounts for between two-thirds and three-quarters of London Stock Exchange volume. Last year, turnover was about $370 billion.

Such volume is puny, however, compared with the $2.5 trillion that changed hands in the Eurobond market last year and the $1 trillion-plus in the U.S. Treasury market. And following

Illinois Marine Buys Back Investment, Felling Another Early Stakeout Deal

By BART FRAUST

NEW YORK — Another of the early interstate stakeout agreements, signed before the advent of regional banking, has been terminated.

Marine Corp., a Milwaukee-based bank holding company, said Friday that Illinois Marine Bancorp Inc., Elmhurst, Ill., has exercised an option to repurchase an investment held by Marine Corp. since 1983.

Interstate Banking

The decision to end the relationship followed Illinois Marine's rejection of a merger proposal by Marine, said Loren Clark, executive vice president of Illinois Marine.

"They made an offer to us, and we felt it wasn't enough," he said, adding that the company intends to remain independent.

"The investment affiliation had three major goals, which included licensing our name in the Chicago area in order to support the efforts of our loan production office in the area, which was accomplished," said George R. Slater, chairman and chief executive officer of Marine.

"We also wanted to make a good investment, and we are pleased not only with the $4.4 million profit Marine will realize but also by the income stream provided by the 11% current return

What Happens If Government Loans Go Bad?

Pressure Could Mount For Recourse Provision

By JAY ROSENSTEIN
Washington Bureau

WASHINGTON — The Reagan administration could come under more pressure from Congress next year to provide some guarantee on government loans sold to the public.

The administration recently began selling loans in the government's portfolio as a way to generate revenue to cut the budget deficit and to improve federal credit management.

The requirement from the administration's Office of Management and Budget that agencies sell their loan assets without future recourse to the federal government has been criticized. Under current guidelines, buyers in the private sector who purchase government loans do so without any guarantee that the government will pay in case of default by the borrowers.

A report by congressional investigators at the General Accounting Office released in late September contends that without some flexibility by agencies to offer some form of recourse, investors will be less interested in making the purchases.

Sen. William V. Roth, R-Del., chairman of the Senate Governmental Affairs Committee, wrote a letter to the Office of Management and Budget on Oct. 21 stating that in light of the GAO report, he wants "to avoid outcomes that might fairly be characterized as 'fire sales' by an acutely attentive press and public."

Mr. Roth added, though, that he recognized the benefits of a nonrecourse sale requirement in helping the agencies upgrade the documentation of their loan portfolios.

Reporter's Notes

Age Vanity?

Ginnie Mae has been lying about her age, but a new rule change by the Government National Mortgage Association should set the record straight. Louis Gaspar, GNMA executive vice president, said some originators were doing such things as putting 26-year mortgages into a pool along with a single 30-year loan and calling the entire package a 30-year pool, thus causing confusion and consternation among investors. From now on, 90% of the mortgages in a pool must have the same term as the longest-term mortgage in that pool, Mr. Gaspar said.

Greetings

Since the Federal Home Loan Mortgage Corp. paid for Chairman Edwin J. Gray's official extravaganza through Europe, why not his official Christmas cards?

Documents released last week show that Freddie Mac purchased four $260-apiece Wimbledon tickets for him and his family during a lavish business trip to Europe in 1985 (since then, Mr. Gray has reimbursed the agency for the tickets, as well as other items). Among those documents were receipts showing that Freddie Mac paid for $432 worth of Christmas cards in 1984 on behalf of Mr. Gray, who is also chairman of the Federal Home Loan Bank Board.

A Freddie Mac spokesman says the cards were a normal business expense that "is not at all unusual." He added that Mr. Gray sent the cards to industry officials who do business with Freddie Mac.

Briefly• • •

When bankers attending the American Bankers Association pulled out of San Francisco last week, they were replaced by another group of bankers. The American Association of Blood Banks began its 39th annual meeting during the weekend. • • • The ABA is planning its first national conference for compliance managers, bank counsel, and auditors for three days here next September. • • • The Independent Bankers Association of America has published a booklet setting out how the new tax law could affect small banks. • • • Among the new coalitions in town is the Alliance for Capital Access, a gathering of issuers of high-yield securities also known as "junk bonds."

A Banker's Guide to the Elections

By JAY ROSENSTEIN

Tuesday, American voters will choose 34 senators, 435 House members, and maybe, as a result, a new national policy on banking. Here's what to look for when the election returns come in.

- **Control of the Senate:** Whether the Democrats take control from the Republicans is the big question this year. Doing so would mean new Senate leadership and new committee chairmen. Sen. William Proxmire, D-Wis., could end up once again as chairman of the Banking Committee. Other possibilities are Sens. Alan Cranston of California or Donald W. Riegle Jr. of Michigan. A Democrat-controlled Senate Banking Committee could mean less talk in that forum about expanding bank powers and more scrutiny of financial institutions and their regulators. Consumer issues and rental housing also could become priorities in the Senate. With Democrats in control of both the House and the Senate, there could be more cooperation between the two banking committees, but they might be more at odds with a Republican administration on banking legislation and matters such as nominations to the Federal Reserve Board.

- **Some key Senate races:** Seven of the 15 current Banking Committee members are up for reelection, but only Sens. Slade Gorton, R-Wash., and Mack Mattingly, R-Ga., are considered in much trouble. Chairman Jake Garn, R-Utah, will be reelected easily. Democratic Rep. Timothy E. Wirth, an outspoken cynic when it comes to expanded bank powers, is battling to become a Colorado senator and could end up on the Banking Committee.

- **Some key House races:** Banking Committee Chairman Fernand J. St Germain, D-R.I., facing allegations of wrongdoing, is in his first close race in years but should win reelection. Rep. George C. Wortley, R-N.Y., a banking supporter also suffering from some recent bad publicity, might not be as lucky as the chairman. Other committee members in tough battles: Reps. Stephen L. Neal, D-N.C., a subcommittee chairman; Stewart B. McKinney, R-Conn., and John Hiler, R-Ind.

- **New faces from the industry:** Bill Grant, a Florida Democrat who for the last 14 years has been the president of the Bank of Madison County, Madison, Fla., seems likely to win a vacant House seat. Robert Neall, a commercial loan officer for the last four years with the Annapolis Banking and Trust Co., Maryland, is doing well in his campaign for a House seat despite being at a disadvantage in name recognition — and in height. His Democratic opponent is Tom McMillen, a six-foot-eleven former professional basketball player. Bill Story, once a Bank of America employee, is waging an uphill battle for a Democratic seat from Colorado. On the Senate side, Idaho Gov. John V. Evans, a Democrat, who with his family has had an ownership interest in a few banks there, is fighting incumbent Republican Steven D. Symms. ■

Financial PAC Dollars Soar For Banking Panel Leaders

On Eve of Election, Incumbents Ride Funding Wave

By PAMELA J. PODGER

Federal Election Commission reports show that total political action committee, or "PAC," contributions to top-ranking members of House and Senate committees have doubled and in some cases nearly tripled since their last elections.

Donations by financial PACs encompass the special — and often competing — industry interests of securities, insurance, real estate, commercial banks, thrifts, and credit unions.

Roughly 300 political action committees of financial industry-related firms are among the total 4,092 PACs registered as of July 1986 with the Federal Election Committee.

Among banks' and thrifts' political action committees, however, donations are dwarfed by the $1,874,639 in contributions made to members of Congress by the Realtors Political Action Committee, which represents the National Association of Realtors. Similarly, insurance political action committees are very large. The American Bankers Association's BankPac is a leader, having set a record in gathering funds this election cycle and with $868,250 in donations made so far in the 1985-86 period, as indicated by the accompanying table.

Of the top-ranking House Banking Committee members, Chairman Fernand St Germain, D-R.I., has received the most from financial-industry political action committees. As the banking panel chairman and an incumbent in a close race this year, he has accumulated the greatest amount of total political action committee contributions — $242,702 — in comparison with other top-ranking members of the committee.

Rep. John J. LaFalce, D-N.Y., who says he has been outspent 2 to 1 in his previous races, notes that raising money is a necessary part of campaigning. "It's necessary to spend money to win elections, and so it's necessary to raise money," says Mr. LaFalce. "PAC money is no better and no worse than any other type of money."

To avoid the political sensitivities of accepting funds from such committees, key banking committee members such as Sen. William Proxmire, D-Wis., and Rep. Jim Leach, R-Iowa, simply return the contributions.

Political action committees also may opt to contribute to both an incumbent and his opponent, but perhaps more to one than the other. For example, Senate Banking Committee member Mack Mattingly, R-Ga., holds a narrow lead in his race against Rep. Wyche Fowler Jr., D-Ga., a member of the House Ways and Means Committee. So far, the Household Finance Corp. has contributed $1,500 to Sen. Mattingly and $500 to Rep. Fowler. "Household isn't committed to any individual and selects candidates who are good for business in general," says J. Thomas Nelson, Household's vice president of federal government relations.

Mark Clark, a spokesman for the U.S. League of Savings Institutions, expresses a commonly heard rationale for giving: Political action committees are collective groups that are taking part in the political process.

Political action committees' contribution criteria include a candidate's publicly expressed opinions and voting records, and also recommendations from association members whom the challengers or incumbents serve, he says.

"Political contributions are what gain access. As an industry group you're taking part in the political process to insure there is a voice for your business," Mr. Clark says. "You can have more impact in supporting candidates who you believe are good for your business. If you want to call it influence peddling, you can."

— Ms. Podger writes on business for the Medill News Service in Washington.

Election Eve Look at PAC Donations

Donations by a Sample of Financial PACs

	Jan. 1, 1985 - Sept. 30, 1986
American Bankers Association	$868,250

Rethinking Securitization

By SANFORD ROSE

The Bank Administration Institute has recently released an intriguing volume, entitled "The Future of Wholesale Banking." The study contends that while banks for the most part retain their historic advantage in loan origination, they now suffer from a growing disadvantage in loan warehousing.

The reason: "...large wholesale banks are faced with a quasi-fixed-cost penalty, owing to their having to pay FDIC insurance, to their foregoing earned interest on amounts kept on reserve with the central bank, and to their having to maintain a relatively low leverage ratio, which results in a higher spread being required to achieve a satisfactory return on equity."

This fixed-cost burden is quantified, with appropriate simplifying assumptions, as follows: The FDIC cost amounts to seven basis points. The cost of idle reserves deposited with the Fed, assuming a money cost of 10%, is around 27 basis points (2.7% times that 10% money cost).

RAISING CAPITAL: The Pace Slows

By KENNETH J. HICKS

NEW YORK — After beginning the third quarter in July with $21.3 billion in debt and equity issues — the highest monthly dollar volume in 1986 — major financial services companies issued only $20 billion more in August and September combined.

A variety of market conditions, including continued uncertainty over the course of interest rates, played a large part in the steep decline for the final two months.

In September, debt issues totaled $8.2 billion, off 32% from the August total of $12.1 billion. The August figure had plummeted 43% from July.

In the first nine months of 1986, more than $125 billion in debt and equity has been raised: $42 billion in the third quarter, $49 billion in the second quarter, and about $35 billion during the first three months.

One of the factors cited by Securities Data Co., a New York-based firm that tracks new corporate debt issues, was a large refunding by the Treasury in Sep-

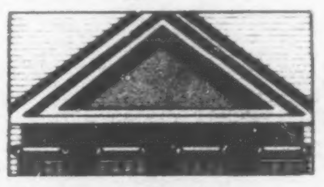
Supreme Court Upholds Banks' IRA Collectives

Declines to Hear Appeal By Mutual Fund Industry

By JAY ROSENSTEIN
Washington Bureau

WASHINGTON — The Supreme Court on Monday upheld the authority of banks to offer a trust service that the mutual fund industry had contended was illegal.



Litigation

The justices, without elaboration, upheld lower court rulings that a bank can form a collective or pooled investment fund consisting of trust assets from individual retirement accounts.

In other action Monday, the Supreme Court agreed to consider a case involving the U.S. Department of Labor and Citicorp Industrial Credit Inc., a commercial lending subsidiary of the New York bank holding company. At issue is whether a secured creditor, after foreclosing on a loan, owes unpaid wages to the borrower's employees.

Also, the Supreme Court listened to testimony in a case that could have significance for the geographic expansion of bank securities activities. The Supreme Court is reviewing a lower court decision that said a national bank may operate a discount brokerage subsidiary under federal securities laws, but only where the bank is allowed to have a branch.

The case, which was brought by the Securities Industry Association, could take on broader meaning if the Supreme Court agrees that these discount brokerage operations are subject to branching laws.

Some observers contend that such a decision could force banks to shut down these and similar operations,

CoreStates' Mac Heads Automated Teller Pack In Ranking Based on Interchange Transactions

Pulse Places Second With Half the Volume

By JEFFREY KUTLER

NEW YORK — Mac, a five-state automated teller machine network owned by CoreStates Financial Corp., Philadelphia, is the largest such system in terms of interchange transaction volume, outdistancing its nearest rival by two to one.

ATMs

Speer & Associates, an Atlanta-based consulting firm, said that between January and June 1986, Mac ranked first by handling 6.5 million monthly interchange transactions at its 1,787 automated teller machines in Pennsylvania, New Jersey, Delaware, Ohio, and West Virginia.

Interchange transactions are cash withdrawals and other funds transfers effected by customers at machines not operated by their own banks. Balance inquiries, which are not considered financial transactions, are excluded from the totals.

Pulse, a Texas-based network with double Mac's number of ATMs, came in second with 3.2 million interchange transactions per month, followed by the Exchange network in the Pacific Northwest at 2.9 million.

By measures other than interchange volume, Pulse is the largest, with 3,867 ATMs, 6 million access cards in circulation, and almost 18 million total ATM transactions a month. Interchange items make up only 18% of Pulse's total machine use, compared with Mac's 52%.

Speer & Associates, in its first survey of the nationwide ATM field, focused on interchange volume as "the best measure of success for these shared networks," said Thomas E. Reynolds, group vice president.

The consulting firm counts among its clients many regional ATM networks in which hundreds of financial institutions participate. Mr. Reynolds said Speer embarked on the survey, which it plans conduct twice a year, to fill in gaps left by other data sources.

He said *Bank Network News*, a newsletter published in Chicago, compiles annual listings based on numbers of terminals or total transactions, not on the critical measure of interchange transactions.

Nor does *Bank Network News* rank proprietary ATM networks — those owned by single banks or holding companies, which may or may not be part of multi-institution regional networks, Mr. Reynolds said.

He said the industry misses the extensive annual reports on the state of the ATM industry that Linda Fenner Zimmer, an independent researcher, stopped issuing several years ago. Mrs. Zimmer, who works out of Marlborough, Conn., does write an annual summary for the *Magazine of Bank Administration* each May.

As of February 1986, she said, Bank of America had the biggest proprietary ATM network in North America with 1,336 machines. First Interstate Bancorp was second with 993, followed by Royal Bank of Canada with 952, Wells Fargo Bank with 788, and Mellon Bank Corp. with 749.

Speer & Associates did not release a numerical ranking of proprietary systems because the 102 institutions responding to the survey were promised confidentiality.

The consultants did disclose that these 102 respondents, with more than $490 billion in aggregate assets and 18 million consumer transaction accounts, had issued 16 million ATM-access cards, also known as debit cards, to 59% of their transaction accounts. This means that they issued an average of 1.5 cards to each account. The average card was used 18.4 times per year.

Speer & Associates estimated that the national average of debit card penetration is 50% of transaction accounts, nine points below that of the Speer data base, and the average card is used 20 to 24 times a year, 11% to 33% more frequently than the survey showed.

The average of 7,000 proprietary ATMs covered in the study handled 4,490 financial transactions per month, not including balance inquiries and error messages.

"This was somewhat comforting, because people have been throwing around a figure of 4,000 to 5,000 financial transactions per month, and now we have real numbers to support it," Mr. Reynolds said.

Of the nation's 100 largest shared regional networks, 47 participated in Speer's first survey. Their 33,000 ATMs accounted for more than half of all ATMs in the United States. Monthly interchange totals ranged from Mac's 6.4 million down to 15,000, and ATM totals from Pulse's 3,867 down to less than 50.

Six networks exceeded 2 million interchange transactions per month: Mac, Pulse, Exchange, Publix Super Markets in Florida, Honor in Florida, and Avail in Georgia.

Seven other networks came in between 1 million and 2 million: Tyme in Wisconsin, Michigan, and Illinois; Most in Washington, D.C., and surrounding states; Shazam in Iowa and neighboring states; Magic Line in Michigan; Cash Stream in Pennsylvania, New Jersey, Delaware, Maryland, and West Virginia; Rocky Mountain BankCard Association's regional Plus network in Colorado, Wyoming, and California; and New York Cash Exchange (NYCE) in New York, New Jersey, and Connecticut.

Of the top 20, the smallest in interchange volume was Treasurer, in New Jersey and Florida, with 500,000. The smallest in both ATMs and total ATM transactions was Service Card System in Oklahoma, Missouri, and Kansas, with 254 machines and 1 million transactions.

The biggest access card base, Pulse's 6 million, was followed by NYCE's 5.7 million, Cash Stream's 5.4 million, Mac's 5.25 million, and Relay's 4.5 million in Virginia and the Carolinas.

In the proprietary portion of the survey, Speer asked banks to name the manufacturers of their electronic terminals. Diebold Inc. led in ATM market share with 39%, ahead of Docutel/Olivetti with 30%, IBM Corp. 22%, NCR Corp. 7%, and others 2%.

Of 7,000 point-of-sale terminals counted in the survey, 38% were made by Verifone, 30% Datatrol, 18% Omron, 8% GTE, and 6% others ■

Top 10 Regional ATM Networks Ranked By Interchange (Interbank) Transactions

Network, Home State	Number of ATMs	Total monthly transactions (millions)	Percent interchange transactions	Interchange transactions (millions)
Mac, Pennsylvania	1,787	12.42	52%	6.46
Pulse, Texas	3,867	17.98	18%	3.24
Exchange, Washington	1,170	5.47	53%	2.90
Publix, Florida	340	2.23	100%	2.23
Honor, Florida	2,100	12.22	18%	2.20
Avail, Georgia	1,120	8.00	25%	2.00
Tyme, Wisconsin	640	3.17	60%	1.90
Most, Virginia	2,058	8.76	16%	1.40
Shazam, Iowa	769	5.29	26%	1.38
Magic Line, Michigan	1,702	8.41	15%	1.26

Agreements Add 6 More Networks To Discover Card's ATM Access List

By LISABETH WEINER

Midwest Bureau

CHICAGO — The Discover card — Sears, Roebuck and Co.'s multipurpose credit and financial services card — now will be accepted by an additional 6,000 automated teller machines as the result of agreements signed with six ATM networks.

That brings to 13,000 the number of ATMs that holders of Discover are able to access across the nation, according to Discover Card Services Inc.

Discover card offers traditional credit card services plus a variety of other financial services, such as a revolving line of credit and access to a savings account. It has been issued to 7.5 million customers, and more than 430,000 merchants now accept the card, according to Sears. Through the first nine months of the year, Sears said the Discover card lost $75.2 million.

"Adding six major ATM networks to our system will assist us in accomplishing our goal of providing convenient cash access to our cardmembers across the nation," said Thomas Butler, executive vice president in charge of the Discover card. "We are delighted to join these networks."

The Greenwood Trust Co., Greenwood, Del., the issuer of Discover, said agreements were signed with, among others, Norwest, which operates the Instant Cash Network and has 500 machines located in eight states; and MTech, which operates the Mpact network and has 1,400 terminals in Texas and four other states.

The others are the Instant Teller network, a service of the City National Bank, which has 1,200 terminals in seven western states; Magic Line, which has more than 2,500 terminals in Michigan; the Exchange Network, with 2,900 ATMs in 25 states; and Universal Money Centers Inc., the credit/financial services company, with 220 machines in Kansas, Missouri, and Oklahoma.

Greenwood previously had signed agreements with 11 other automated teller machine networks in various parts of the country.

These are: Cashstream, which operates through the Mellon Bank and has

Chemical Elects Japanese Design For ATM Growth

Bank Orders Omron Machines To Replace Docutel Equipment

By MICHAEL WEINSTEIN

NEW YORK — Chemical Bank is planning to refurbish and expand its automated teller machine network, and the bank has chosen Japanese technology for the system's growth, said a bank executive.

Chemical has ordered at least 100 teller machines from Omron Financial Systems Inc. of Las Colinas, Tex., a subsidiary of Omron Tateisi Electronics Co., Kyoto, Japan. The bank plans to buy an undisclosed number of additional ATMs, said J. Brian McLean, a Chemical vice president.

"It's likely that the order will be substantially larger than that," he said at press conference here sponsored by Omron.

Chemical, one of the first banks in the country to install ATMs, has about 150 teller machines, which is less than its major competitors such as Citibank, Chase Manhattan Bank, and Manufacturers Hanover Trust Co.

"It's a combination of replacement and expansion, with the emphasis on replacement," said Mr. McLean, explaining Chemical's decision to order new ATMs.

Chemical is also a member of the New York Cash Exchange, a shared network of some 2,200 teller machines.

"We still don't have enough ATMs," Mr. McLean said. "It's a customer service matter."

Omron becomes the primary ATM vendor for Chemical, the nation's sixth biggest commercial bank.

Up to now, Chemical has been using primarily ATMs made by Olivetti U.S.A., known as Docutel Corp. before it was acquired by Ing. C. Olivetti & Co. of Ivrea, Italy. Last month, Olivetti began notifying its customers that it was abandoning the ATM business in the United States.

But Mr. McLean said that Chemical chose Omron before the bank heard about Olivetti's decision.

"Our technical people looked at the [Omron] machine and found it was of the highest quality we have ever seen in the ATM arena," Mr. McLean said.

The contract with Chemical is a boost for Omron's U.S. business. Omron is a major supplier of ATMs outside the United States, but it has only a slight presence in the American market.

"This gives us the credibility we have strived for," said Robert T. Jansen, Omron's president. "Three years ago when we began, no one knew who we were."

Chemical will use the Omron machines to add new locations to its teller machine network and to replace its aging Docutel machines at existing locations, Mr. McLean said.

Even though Chemical has tapped into extra teller machine locations through NYCE, Mr. McLean said that the bank needs more machines because customer lines are too long.

"NYCE has caused our own customers to use our ATMs more," he said.

Mr. McLean declined to say how many machines the bank will add to its network or where they will be installed.

Omron's Mr. Jansen estimated that the U.S. market for ATM sales and service represents $300 million to $350 million annually. And two Japanese firms, Omron and Fujitsu Systems of America Inc., have taken aim at that market while demand in the market has been stagnant for the last two years or so.

Appeals Court Tosses Out SEC Rule

Bank Group Wins Fight Against Registration

By NINA EASTON

WASHINGTON — A federal court of appeals on Tuesday ordered a lower court to throw out the Securities and Exchange Commission's Rule 3b-9, the controversial requirement that banks place their securities activities in SEC-registered subsidiaries.

A three-judge panel of the U.S. Court of Appeals for the D.C. Circuit concluded that the American Bankers Association, which brought the suit, was correct in arguing that the SEC had overstepped its authority. The court ordered the U.S. district court, which had sided with the SEC, to reverse its decision and "to declare Rule 3b-9 unlawful."

SEC officials said the commission has not decided whether to appeal the decision, but they indicated that an appeal to either the Supreme Court or the full circuit court is likely.

The SEC had issued the rule out of concern that growing numbers of banks — which are not subject to the commission's investor protection oversight — were offering securities services to their customers.

Banks had objected to the rule because of the costs involved with SEC registration and because of concerns over the SEC extending its jurisdiction over banks, which are already heavily regulated by the banking agencies.

"Consumers won an important victory in the courtroom today," said Donald Ogilvie, ABA's executive vice president. "The decision ensures that bank customers will continue to enjoy the savings and convenience that discount brokerages provide."

Michael F. Crotty, who argued the

Hostile Bid for BankAmerica Is One of Interstate's Options

Some Stockholders Might Be Receptive

This story was reported by Robert Luke in Los Angeles and by Andrew Albert and Bart Fraust in New York. It was written by Mr. Fraust.

First Interstate Bancorp, saying it is "reviewing its alternatives" after once again being rebuffed in its effort to acquire BankAmerica Corp., now must consider the option of a hostile tender offer.

Despite reports to the contrary, the Federal Reserve Board would not necessarily oppose a hostile takeover of BankAmerica, banking lawyers say. Strategic and financial considerations — including that First Interstate would be attempting to acquire BankAmerica without access to its books — may prove to be more of a deterrent to a hostile bid than legal and regulatory concerns.

A hostile bid, which is an offer opposed by the management of the target company, is one of First Interstate's options, and the company is reviewing that possibility, sources close to that company confirmed on Tuesday.

Meanwhile, some BankAmerica shareholders appeared to be growing increasingly receptive to a hostile bid by First Interstate following BankAmerica's request on Monday that First Interstate withdraw its $3.4 billion offer.

"Their [BankAmerica's] board members just seem to show they don't care

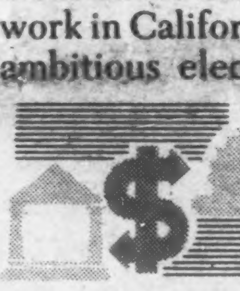
Visa USA Takes Over Management Of Interlink Point-of-Sale Network

By JEFFREY KUTLER



Point-of-Sale

NEW YORK — Visa U.S.A. said Tuesday that it will take over management of the Interlink point-of-sale network in California, the largest and most ambitious electronic direct-debit system in the country.

The move will help the major California banks that founded Interlink economize on electronic funds transfer expenditures. To Visa it brings expertise that could accelerate development of nationwide point-of-sale capability.

Since it began operating in June 1985, Interlink has relied on Visa's data center in San Mateo, Calif., for back-office data processing and communications support.

The network has signed 3,000 retail locations and handles about two million electronic debits a month. With the addition of terminals in major supermarkets and gasoline stations, officials predict that annual volume will approach 100 million in 1987, a level far above any other regional automated teller machine or point-of-sale network.

The four largest California banks — Bank of America, Security Pacific National Bank, First Interstate Bank, and Wells Fargo Bank — spent undisclosed millions of dollars to build and market Interlink. By throwing in their lot more closely with Visa, the California banks can reduce their financial exposure while the entire U.S. banking industry, through Visa, can share in their technical accomplishment.

"It is a win-win situation," said Rob-

Banks Face New Lineup in Democratic Senate

Proxmire Could Push for Nonbank-Bank Ban, Consumer Protection Measures

By BARTLETT NAYLOR
Washington Bureau

WASHINGTON — Democratic control of the Senate has sweeping implications for the banking industry. It enhances chances for passage of banking legislation, with an emphasis on reregulation and consumer protection measures, congressional members and lobbyists said on Wednesday.

After six years of Republican dominance, Democrats regained control of the Senate in Tuesday's election, winning eight new seats to give them 55 seats to the Republicans' 45.

On the Senate Banking Committee, Sen. William Proxmire, D-Wis., an activist on banking matters, will replace Sen. Jake Garn, R-Utah, an advocate of deregulation, as chairman. Sen. Proxmire presided over the panel in the late 1970s, when his party last controlled the Senate.

In an interview Wednesday, Mr. Proxmire said he was "excited" at the prospect of chairing the panel again.

"We have to move legislation to improve the safety and soundness of the industry," said the lawmaker.

Generally, here are some of the implications for the financial industry:

- With both chambers of Congress controlled by the Democrats, there's a better chance for cooperation that will lead to legislation, especially consumer-protection measures.
- Under Mr. Proxmire, the Senate Banking Committee will increase committee investigations. He's also an outspoken critic of limited-service or nonbank banks, increasing

We've got a lot of leftover business from the last Congress that we have to deal with.

— Sen. William Proxmire

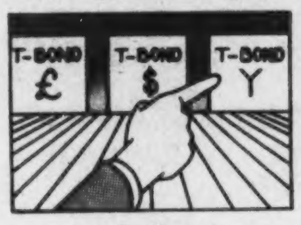
Security Pacific's 'Options Exchange' Hits Another Regulatory Roadblock

By JAY ROSENSTEIN
Washington Bureau

WASHINGTON — Security Pacific National Bank has again delayed the start of an interest rate options trading system due to regulatory hurdles, this time primarily from the Federal Reserve Board.



Options

The Fed has not considered the bank's plan, nor has the Los Angeles bank's parent company applied to the agency for permission to start the service.

Security Pacific contends that its proposed brokerage and clearing agency activities had been considered permissible activities by the Fed in the past and that under 1984 regulations the holding company doesn't need to seek new approvals. But according to information sent to Congress by the Fed, the agency's staff now is mulling whether the combination of these activities should be reviewed by the board.

Stephen Lynner, a Security Pacific official in New York who conceived the idea for the trading system, said in an interview that the uncertainty about the Fed's intentions has "thrown a monkey wrench" into plans to start the trading system.

Security Pacific did get one bit of good news from the regulators in the last week. Peter Liebesman, assistant director of legal advisory services with

Voters in Texas Clear the Way For Branch Banks

By DAVID LaGESSE
Southwest Bureau

DALLAS — Texas voters on Tuesday overwhelmingly approved branch banking for the Lone Star State, clearing one obstacle to long-awaited takeover deals with out-of-state banks.

The limited branching proposal, which required voter approval because it amended the state's 1904 constitution, passed by nearly a 3-to-1 margin and becomes effective on Jan. 1. Banks can open as many as three new branches in each county, and bank holding companies can consolidate their subsidiary banks into branches — as long as they retain one charter in

Three Officials Plead Guilty In Bevill Fraud

By ANDREW ALBERT

NEWARK, N.J. — Three former officials of the defunct brokerage firm of Bevill, Bresler & Schulman Inc. pleaded guilty on Wednesday to planning and carrying out a securities fraud scheme that ultimately cost the firm's customers more than $100 million.

A fourth former official of the company, president Gilbert C. Schulman, 38, pleaded innocent to the same federal charges, and his trial begins on Jan. 13.

The elaborate fraud scheme, considered one of the biggest in U.S. history, came to a crashing halt in April 1985, when authorities forced an affiliate of the Livingston, N.J., securities group into bankruptcy law proceedings. Ever since, commercial banks, thrift institutions, and other customers of the failed broker have been waiting and hoping to recover at least part of their losses. At least one bank, Worthen Bank & Trust Co. NA, Little Rock, Ark., barely survived the $52 million loss it suffered from its dealings with Bevill Bresler.

The guilty pleas are not expected to have any effect on the bankruptcy proceedings, in which creditor claims against the Bevill Bresler group total $262 million. Saul S. Cohen, a bankruptcy law trustee handling the case, said he and his staff have assembled a $103 million pool that could eventually be divided up among creditors, if they can resolve disagreements associated with competing claims. "We're still searching for assets," he said.

The three former officials who pleaded guilty were company chairman Robert L. Bevill, 43; treasurer John D. Rooney, 40, and Stuart A. Gottlieb, 38. They admitted to participating in a scheme, which began in 1982, to defraud customers of an affiliated firm called Bevill, Bresler & Schulman Asset Management Corp. It was the asset management unit, a deal-

Corrections

An article in the Nov. 4 edition of the *American Banker* ("CoreStates' Mac Heads Automated Teller Pack in Ranking Based on Interchange Transactions," page 2) included incorrect statements about information published by *Bank Network News*, a Chicago-based newsletter. The statements were attributed to an executive of Speer & Associates, Atlanta, a consulting firm that published a ranking of automated teller machine networks according to interchange volume.

John Love, publisher of *Bank Network News*, said his organization provides comprehensive information on automated teller machine networks in its *EFT Data Book*, the latest edition of which is due out this week. Its rankings include the top 100 networks based on total transactions and transactions that go through central computer switches, the percentage of transactions that are interchange (or interbank) items, and the top 15 proprietary (single-institution) ATM networks.

The information in *EFT Data Book* is more complete than readers of the *American Banker* article were led to believe.

Prudential-Bache's Singular London Strategy Begins to Pay Off in Merchant Banking Area

A Briton Leads US Investment House's Effort to Compete with Older Players

By PETER FIELD

LONDON — Prudential-Bache Securities Inc.'s novel approach in the London market has scored its first big success — approval by the board of the British printing group McCorquodale of a management buyout bid worth about $220.8 million that is being led by Prudential-Bache.

INTERNATIONAL BRIEFING

If the deal goes through, it will be the largest management buyout of a public company ever seen in the United Kingdom. And it follows the recruitment two months ago of senior merchant banker John MacArthur to run Prudential-Bache's merchant banking operations in London.

Prudential-Bache had taken a different tack than its American and European competitors when, in July 1984, instead of buying a London stockbroker, it started to build an entirely new broking firm with three key initial recruits at partner-level from another firm.

Now, Prudential-Bache has set itself even further apart from its U.S. counterparts by hiring the 52-year-old Mr. MacArthur from Kleinwort, Benson Ltd. in July to build a sterling-based merchant bank. A name still has to be found for this operation to avoid confusion with the unrelated Prudential Assurance Co. in the U.K.

Mr. MacArthur is chairman of the merchant banking group, which includes the stockbroking business, a gilt market-maker, a stock exchange money broking operation, Clive Discount Holdings, and the nascent corporate finance activities. The investment banking activities of Prudential-Bache in London — mainly Eurosecurities — continue to be run by William Hulton, another Briton recruited from E.F. Hutton & Co. a couple of years ago.

Mr. MacArthur is probably the most senior British merchant banker to be recruited by a U.S. investment bank. He had been at Kleinwort for 26 years and was deputy head of corporate finance until January when he was made chairman of the business development committee. An influential U.K. mergers and privatization expert, he hopes to apply that experience to the Prudential-Bache job, as the McCorquodale deal suggests.

"The essence," he said, "is to provide a merchant banking service to the U.K. marketplace which will mirror to the maximum extent possible that which the principal domestic institutions provide." In other words, the intention is to go head-to-head with Kleinwort, S.G. Warburg & Co., and Morgan Grenfell & Co.

Most U.S. investment banks came to the U.K. in the first place because of the Euromarkets. More recently, they've become more active as part of the run-up to the Big Bang deregulation of the London markets on Oct. 27. But they haven't had much success, according to Mr. MacArthur, in "breaking into that part of the U.K. corporate sector which is not transactions-related and based on the difference between five and 10 basis points." He believes that most of the U.K. corporate sector will for the foreseeable future still place a lot of emphasis on relationships.

Won't that therefore make it difficult for a newcomer like Prudential-Bache to pry clients away from their traditional banks? "If you've got good ideas, you will get a hearing," said Mr. MacArthur.

Goldman, Sachs & Co. is about the only U.S. investment bank that has made any inroads into U.K. corporate finance. How far it has penetrated is hotly disputed by many British bankers. One ranking showed Goldman fourth in advising British companies on mergers and acquisitions in the first half of the year.

Yet, said Mr. MacArthur, "The reality is they have not led one public takeover deal in the U.K. They have been number two or three in the limited number of transactions in which they have been involved."

Mr. MacArthur thinks the Prudential-Bache approach of recognizing differences between local markets gives the firm an advantage. "There won't be homogenized markets for financial services in Europe in the next few years," he said, "because homogenization assumes industry in Europe is going to be investment banker-driven to the extent it is in the U.S."

'The essence is to provide a merchant banking service to the U.K. marketplace which will mirror to the maximum extent possible that which the principal domestic institutions provide.'

— **John MacArthur**
Prudential-Bache Securities

Most managements in the U.K. and continental Europe cannot understand the almost obsessive interest their American colleagues display in very marginal differences in the cost of capital, which is largely investment banker-driven.

"Spending 20 days a year listening to investment bankers telling you how you can save one-thirty-second of a percent is a very bad deal in terms of opportunity costs," Mr. MacArthur said.

Mr. MacArthur's main task at the moment is recruitment, and he said there was a very strong possibility of hiring more senior merchant bankers. The group at present numbers about 200. Only eight are in corporate finance and Mr. MacArthur wants to get that up to 30 as soon as possible.

Mr. MacArthur's other main concerns at present are integrating the stockbroking operation, P-B Securities, Down, de Boer & Duckett, into the larger merchant banking group, and reviving the fortunes of Clive Discount, which lost 810,000 pounds (about $1.15 million at Tuesday's exchange rate) in calendar 1985. The main reason for buying this seems to have been the discount house's expertise at the short end of the gilt market, which Prudential-Bache found useful in building its gilt market-making operation.

One of the founders of the stockbroking firm, Duncan Duckett, resigned in July, two weeks before the recruitment of Mr. MacArthur was announced. Like the other two founders, Ashley Down and Christopher de Boer, Mr. Duckett had joined from James Capel & Co.

There was no connection between the two events, said Mr. MacArthur. But at the time of Mr. Duckett's departure, Prudential-Bache did announce it was taking its stake of 20% in the broker up to 100%. That inevitably meant tighter central control of the broking operation and, according to Mr. MacArthur, "Duncan probably felt uncomfortable with the size and growth of the operation from its small and informal beginnings."

The Prudential-Bache merchant banking group has about $99 million in capital. The stockbroking business is already well developed with 20 analysts researching the U.K. The level of capital is clearly quite small at present, but with the formidable resources of Prudential-Bache and the Prudential Insurance Company of America itself behind the merchant bank, "I don't think additional capital is a problem subject to justification," Mr. MacArthur said.

To some in the City of London, it seems odd that the Euromarket activities should be run under a separate chief. Mr. MacArthur acknowledged an enormous overlap between his operations and Mr. Hulton's. But he said, "The immediacy and size of Euromarket operations are such that, if you're not very careful, the embryonic merchant banking activities of a house like this could easily get sucked into and swallowed up by the requirements of Euromarket transactions."

Mr. MacArthur obviously had higher aspirations at Kleinwort Benson, but decided these were not likely to be satisfied after he took over as chairman of the business development commiteee in January. This gave him a key strategic planning role, but he would have preferred to head corporate finance.

His move to Prudential-Bache came about as a result of his working on the sale of Clive Discount to the company. Mr. MacArthur had brought Clive to the market years ago and had sat on its board.

"In finding a good home for Clive, I got to know the Prudential-Bache and Prudential people well and found a good home for myself," he said, adding that it wasn't intentional. "I didn't put myself about with the headhunters and Prudential didn't headhunt me."

Prudential-Bache must now be hoping that Mr. MacArthur can bring in clients of the caliber he handled at Kleinwort, where he worked on the privatization of Enterprise Oil and the water industry (the latter now aborted). He also battled three times on behalf of clients against newspaper publisher Robert Maxwell and staunchly defended the al-Fayed brothers against Lonrho PLC in its campaign to find out more about how the al-Fayeds financed their purchase of House of Fraser, owner of Harrods department store.

Mr. MacArthur said he saw no reason why Prudential-Bache should not be doing similar deals. The McCorquodale buyout, even if it doesn't come off, is a start, and shows how his contacts can be combined with the financial muscle of Prudential Insurance, which is providing nearly 50% of the financing of the deal. Mr. MacArthur had been financial adviser to McCorquodale for about 12 years while he was at Kleinwort. The management buyout is designed to defeat a hostile bid valued at about $205.2 million from another British printing group, Norton Opax.

According to one insider, Prudential-Bache is likely to be doing more leveraged buyouts and management buyouts.

"John has a well-thought-out philosophy on adapting U.S. ideas to the U.K. market," the insider said. "You can't just take them off the shelf and apply them to the U.K."

Mr. MacArthur said: "We will be offering a full range of corporate finance advisory services based on our skills and experience of the U.K. corporate sector." ■

some necessity to go beyond the immediate community to attract funds.

"In the past, we have gone outside the community," she said. "It's the way we have been operating. However, now it's more difficult," with all the institutions vying for the same customers in a deregulated environment. Ms. Chu pointed out that the "cream" of the Trust Savings Bank borrowers have been targeted by mainstream institutions — including nonbank financial service providers — making the task all the more difficult.

While officers of some minority institutions have called for several such companies to band together for consortium lending, Ms. Chu doesn't see much need for it in the California markets.

According to *Black Enterprise* magazine's June issue, assets of black-owned thrift institutions grew 21.3% in 1985, to $1.5 billion. Deposits were up 23.1%, to $1.2 billion. *Black Enterprise* serves the black business community.

The magazine says that "more stringent rules at majority-owned institutions regarding checking accounts, as well as delays in the processing of loan applications, drove lower- and middle-income customers to the doors of black thrifts."

Other Survey Findings

- Since yearend 1983, when the *American Banker* first listed minority-owned thrifts, 10 have converted from savings and loan associations to stock savings banks. Thirty-two, or 54%, of the 59 thrifts listed in today's table are stock associations.
- According to the guidelines set up by the Treasury Department for an institution to be eligible for the Government Minority Bank Deposit Program, First Federal Savings Bank, Santurce, Puerto Rico, is the largest minority-owned financial institution, with $854.6 million in deposits and $1.2 billion in assets. First Federal ranked 236th among all thrifts at yearend 1985.
- Mutual Savings & Loan Association, Durham, N.C., had the highest ratio of net worth to assets among the thrifts that provided the data, with 11.61%; Dwelling House Savings & Loan Association, Pittsburgh, was second, with 11.53%, and Citizens Federal Savings Bank, Birmingham, Ala., was third, with 9.41%. Thirty-nine of the 59 institutions listed had ratios of net worth to assets above the 3.00% minimum.
- Seven thrifts turned net income losses in 1984 into gains in 1985. Twelve others at least doubled their net income from 1984.
- According to the Bank Board, the breakdown of minority thrifts as of Dec. 31, 1985 was:

Group	Number	Assets (Mil.$)
Black	34	$1,500
Hispanic	24	$2,900
Asian	17	$2,500
Women	1	$28

The Bank Board indicated that black-owned thrifts are mainly located in major cities along the East Coast; Hispanic-owned thrifts are scattered throughout the Southwest, and 11 of the Asian-owned thrifts are in California.

Firms Whose Data Was Unavailable

Minority-owned thrift institutions that would not participate in this year's survey and whose data was not available through other sources are: Enterprise Savings & Loan Association, Long Beach, Calif.; Montebello Federal Savings & Loan Association, Montebello, Calif.; Metropolitan Federal Savings & Loan Association, Hialeah, Fla.; Community Federal Savings & Loan Association, Tampa, Fla.; Illinois-Service Federal Savings & Loan Association, Chicago, and Craven County Federal Credit Union, New Bern, N.C. ■

➻ Continued from Page 4

full range of capital markets services in their own country.

Is it this easy to reformulate the bank holding companies of 1986 into the debanked financial services holding companies of 1987 and beyond? Of course not — largely because of the cultural, legal, and public policy baggage attached to existing commercial banks.

Clearly, debanking is a radical step. As such, it makes bankers viscerally uncomfortable; bankers are constitutionally averse to dramatic action of this sort. Nevertheless, as the stalemate on the Hill continues, debanking will become an ever more real alternative, even for the most cautious bank executive.

From a legal standpoint, it is even more complicated for a banking company to debank than it was for the retailers and securities firms to enter the banking business. Many questions will be raised as bank holding companies begin to restructure themselves.

Litigation could be initiated based on the view that the new, debanked entity was created only to evade the Bank Holding Company Act. It is impossible to forecast the outcome of such litigation without knowing the facts of any particular case. It is worth noting, however, that the courts have lately construed the banking statutes rather narrowly. This has inhibited any move to apply current banking laws to new financial industry diversification.

Debanked entities would continue the re-creation of the U.S. financial services industry that was begun early in the 1980s by the innovative nonbank competitors. They would further the trend toward development of entities that take other people's money in a fiduciary capacity and — even if through other corporate arms — engage in a very broad range of financial and commercial services.

A trend of this sort may not be good public policy, since it would increase the opportunities for the conflicts of interest and tied-sales that are troublesome to financial industry regulators. Certainly, this trend will raise serious problems if the relationship between the banking subsidiaries and the other corporate activities is not governed in some fashion.

However, bank management does not have the luxury of giving these broad public policy issues too much consideration. Managers face substantial competition and a growing erosion of market share in retail and wholesale banking services. If Congress continues to be inactive, debanking may be the choice of managers concerned with their principal policy problem, protecting the interests of their shareholders. ■

Bank to Pay $1 Million To End Dispute with City

BEAUMONT, Tex. (AP) — First City Bank will pay the city of Beaumont slightly more than $1 million to settle a dispute stemming from the city's loss of investments worth $20 million in March 1985.

The settlement, approved last week by the city council, will bring the city monthly production payments, over a six-year to eight-year period, of royalties the bank earns from oil, gas, and mineral leases in Texas and Louisiana.

The agreement guarantees the city will get at least $1 million, even if the wells do not produce.

The bank held a depository contract with the city at the time Beaumont lost the money in investments with the failed E.S.M. Government Securities Inc., Fort Lauderdale, Fla. The city has filed several lawsuits, but not against First City, to recover the money.

The bank contends it did not contribute to the city's loss, but First City chairman Wilton White said the bank agreed to the settlement to avoid continuing conflict.

The city claims the bank failed to secure the required two signatures of top city officials to authorize the release of city funds from the depository accounts.

The settlement agreement means Beaumont has recovered $15 million of its investment, most of that from a lawsuit against Alexander Grant & Co., now Grant Thornton, the auditor for E.S.M. Several other suits by the city are pending. ■

This announcement appears as a matter of record only. It does not constitute an offer to sell nor a solicitation of an offer to buy these securities.

Minority-Owned Thrifts Switch to New Financial Fuel As Supercharged Asset and Deposit Growth Sputters

By KENNETH J. HICKS

NEW YORK — The explosive asset and deposit growth for minority-owned thrift institutions slowed considerably from the levels of the past two years, but net income improved in 1985.

Though percentage gains exceeded those of the entire thrift industry, the relatively small number of minority-owned thrifts still reflected industry-wide results for 1985. The thrift industry, as a whole, has been consolidating and concentrating on revenue production and shifting away from asset and deposit growth.

These are among the findings of an *American Banker* survey of minority-owned thrift institutions. According to the Department of the Treasury, a minority-owned institution is at least 51% owned or controlled by Asian-Americans, Black Americans, Hispanic-Americans, Native Americans, Eskimo/Aleutian, women, or a combination of these groups.

Included in the survey were all thrift institutions on the Treasury Department's roster of financial institutions that are participating in the Government Minority Bank Deposit Program. Many of these thrifts would not provide any data for the listing, and their yearend 1985 data were obtained from several other sources. The institutions that refused to participate and whose data were not available from the other sources are listed at the end of this article.

Among those minority thrifts for which two years of comparable data were available, deposits grew 15%, to $2.1 billion; assets were up 16.3%, to $2.5 billion; and net income showed a 30.8% surge, to $9.5 million. For all thrifts in the United States, deposits grew at a 3.4% rate in 1985.

California thrifts' performance dominated the minority-owned thrift picture. While these thrifts represented 37.4% of all 1985 deposits, they accounted for 82.2% of the dollar amount of net income. The 14 institutions accounted for approximately 23% of all minority thrifts.

California thrifts that ranked among the top 100 minority thrifts in the nation, while exhibiting only a 4.1% gain in deposits, more than doubled their net income in 1985.

The reduced cost of funds helped all thrift institutions in 1985. But many California institutions, buoyed by "a strong and continuing demand in the residential real estate market," were able to turn losses in 1984 into profits the following year, according to Curt Hallahan, senior vice president with the California League of Savings Institutions.

Net income in 1985 for all minority thrifts in today's listing showed a loss of $75.8 million, due entirely to the huge $85.5 million loss by Presidio Savings & Loan Association, Porterville, Calif. Presidio was declared insolvent and taken over by the Federal Home Loan Bank in August of this year. Its deposits were transferred to Gibralter Savings, Beverly Hills.

Presidio is one of several California thrifts that since the early '80s has experienced astounding deposit growth fueled by brokered deposits. Because the thrift had such a large amount of these deposits, it began making speculative investments in real estate joint ventures and futures and options contracts.

At yearend 1982, the thrift had $39 million in deposits. By yearend 1985, Presidio reported deposits of $198 million. According to the Bank Board, nearly 88% of those deposits were brokered deposits.

Largest Minority Thrifts

Ranked by Deposits in Thousands

	12/31/85
1st Federal Savings Bank, Santurce, P.R.	$854,635
Tesoro S&L Assn., Laredo,Tex.	258,684

Presidio S&LA, Porterville, Calif.	198,015
General Federal SA, Coral Gables, Fla.	194,405

Ranked by % of Net Worth-to-Assets

	NW/Assets 12/31/85
Mutual Savings & Loan, Durham, N.C.	11.61
Dwelling House S&LA, Pittsburgh	11.53
Citizens Federal SB, Birmingham	9.41
Advance Federal S&LA, Baltimore	9.40
Columbia S&LA, Milwaukee	8.14

Analysts of the thrift industry view the minority-owned thrifts' plight as no worse than that of the mainstream industry. But because there are so few of these institutions, the problems seem more serious.

The number of minority-owned or controlled thrifts has dwindled from 86 in 1980 to approximately 70 at yearend 1985, according to the Federal Home Loan Bank Board.

"There are so many that are basket cases. And many of those may be in receivership," an industry observer explained.

Despite the upbeat expectations of officers of minority-controlled thrifts, the pressures on the companies are intense. In late 1985, the largest minority-owned thrift, United Bank SSB, San Francisco, signed an agreement to be acquired by Great American First Savings Bank, San Diego, a mainstream thrift that is the 19th largest in the nation. United, with deposits of $489.2 million at yearend 1985, reported a net loss of $1.5 million in that year.

Other minority-owned thrifts that have been declared insolvent or merged with mainstream institutions include: Camino Real Savings Bank, San Fernando, Calif.; Coronado Federal Savings & Loan Association, Kansas City, Mo.; Major Federal Savings & Loan Association, Cincinnati; and California Women's Savings & Loan Association, Los Angeles.

Richard Tucker, director of the Bank Board's office of community investments, stresses that minority-owned thrifts are "pretty much like majority institutions," and that they're going through the same pains of the deregulated environment.

Table of Minority-Owned Thrifts
Page 6

Mr. Tucker said that these thrifts cannot hope to compete against the larger institutions in terms of offering all services. But the thrifts can hold their own by offering limited services important to their communities, he said.

"Some do very well with offering community services. There is a Philadelphia association that has a 7% net worth. They've been chugging along at a rate they feel comfortable with."

The association, Berean Savings Association, reported asset growth of slightly more than 12% for 1985.

But Betty Tom Chu, chief executive officer of Trust Savings Bank, Monterey Park, Calif., feels there may be

Will $25 Billion Do the Trick for the FSLIC?

Thrift Industry May Need More than Fattened Fund

By NINA EASTON
Washington Bureau

Losing Ground
FSLIC's Struggle for Survival
FIRST OF A SERIES

WASHINGTON — Twenty-five billion dollars. Lay 25 billion $1 bills end to end and they'll stretch to the moon and back nearly five times, or circle the earth 95 times. Put them on a scale opposite 6,200 elephants, and the dollars will tip it.

Anyway you look at it, $25 billion is a lot of money.

To the Treasury Department and the Federal Home Loan Bank Board, $25 billion is the magic number that will save the dwindling Federal Savings and Loan Insurance Corp. and allow the savings and loan industry to live happily ever after. When Congress reconvenes in January, the nation's lawmakers will continue to consider a complex cash-infusion plan designed to move the FSLIC closer to that magic number. In the last session of Congress, the plan got snagged on industry battles over more controversial banking matters and failed to receive the lawmakers' endorsement.

That number is also an educated guess, as the officials who guessed it freely concede. It represents a rough estimate of how much the FSLIC will have to pay over the next five to six years to close down at least 252 — and maybe many more — "brain dead" savings and loans.

Twenty-five billion dollars dwarfs the FSLIC's current primary reserve — at $2.5 billion — by a factor of 10. But is it enough? Will the FSLIC plow through that money and be back at Congress' door five years later, hat in hand?

In a series of recent interviews, economists, regulators, and industry officials discussed emerging pressures on the savings and loan industry and their concerns about whether the insurance fund will spend its money wisely and efficiently. Taken together, these concerns suggest that even if Congress adopts a recapitalization plan, the FSLIC will continue to fight for its life:

- Losses from real estate loans are climbing, and experts predict that tax reform will exacerbate those losses in many markets. The industry's second-quarter earnings dropped to $314 mil-

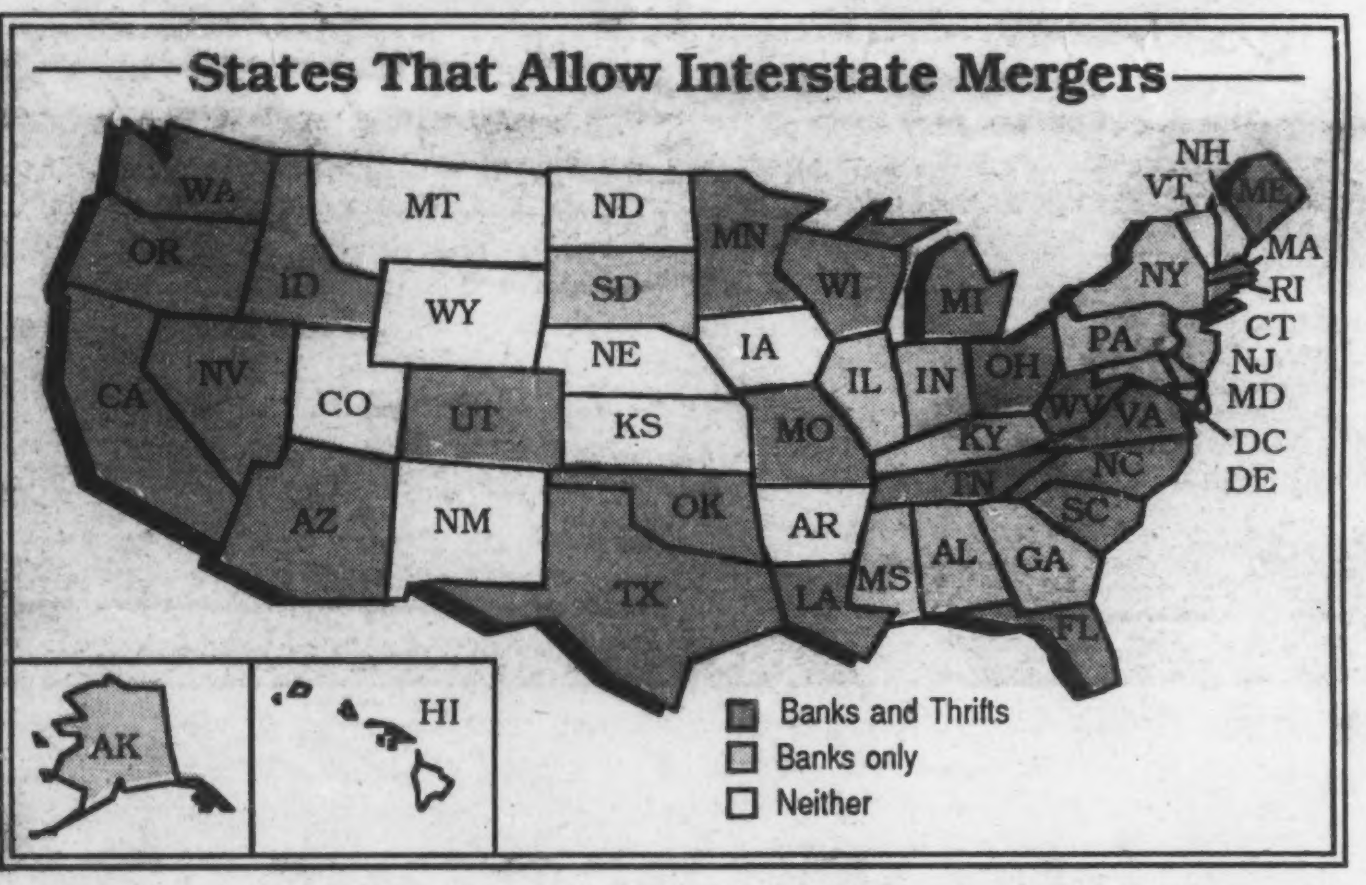
Thrifts Catching Up to Banks in Interstate Expansion Rights

States That Allow Interstate Mergers



By MARK BASCH

NEW YORK — The Federal Home Loan Bank Board put federally chartered thrifts on a par with state-chartered thrifts earlier this year with regard to interstate expansion authority, but in some states, thrifts still don't have parity with commercial banks.

Thirty-eight states and the District of Columbia give banks the power to acquire out-of-state institutions, but 13 of those states don't extend those same powers to thrifts.

West Coast Thrifts' Interstate Plans
Pages 8 and 9

This doesn't mean that the thrift industry always ends up second best to commercial banks in state legislation.

Handful of Thrift Holding Companies Has Become a Bushel

The Number of Such Firms Has Grown from 72 in 1981 to 285 Today; Need for Capital Spurred the Surge

By L. MICHAEL CACACE

NEW YORK — Three out of every four thrift holding companies operating in the United States today did not own a thrift institution just five years ago. At present, there are 285 thrift holding companies in operation, and 213 of these began operating after Dec. 31, 1981.

The surge in the formation of thrift holding companies over the past five years mainly reflects the industry's need for substantial amounts of capital. This need was mainly attributable to the long period of unprofitability in the industry during the early 1980s.

To obtain the needed capital, many thrifts converted from the mutual form of ownership to stock ownership. As part of this conversion, most of these thrifts formed holding companies. In addition, to infuse capital into the industry, the Federal Home Loan Bank Board encouraged the acquisition of troubled thrifts by institutions outside the industry — such as Citicorp.

Tables of Thrift Holding Companies
Pages 50-52

The *American Banker* found in its most recent study of the top 300 thrifts in the industry, published on May 30, that 52% of these thrifts were stock institutions on Dec. 31, 1985, up from 32% on Dec. 31, 1983.

American Banker's annual survey of thrift holding companies is being published today. It lists the 285 operating thrift holding companies geographically by state and alphabetically within the states.

The listing identifies the holding company by major type — diversified (D) or nondiversified (N). Indirect thrift holding companies are identified with an asterisk after their name. The names of thrift subsidiaries, listed in the center column, show whether the firm is a unitary or multiple-thrift holding company.

The listing also gives the date that the holding company charter was approved by the Federal Home Loan Bank Board, and the assets, deposits, and regulatory net worth of the holding company's thrift subsidiary or subsidiaries.

Forty-eight of the 285 currently active thrift holding companies were formed before 1980. Nine were formed in 1980; 15 in 1981; 16 in 1982; 45 in 1983; 55 in 1984; 64 in 1985; and 31 over the first nine months of 1986. The date of Bank Board charter approval for two firms was not available.

The law governing the formation and operation of thrift holding companies is the S&L Holding Company Act of 1967 (Public Law 90-255; 12 U.S.C. 1730a). The oldest thrifts in operation today have charters that were approved by the Bank Board in 1968. Of the 285 thrift holding companies in operation today, 17 were chartered in 1968.

The oldest nondiversified and diversified thrift holding companies are based in Ohio. Both had their charters approved on Jan. 1, 1968. Marietta Franklin Securities Co., Columbus,

The fact that CPI is, by far, the largest mortgage processing company in the United States should not be nearly as important to you as the reasons why.

CPI has more than 200 clients — Ranging in size from 4,000 loans to over 250,000 loans in their portfolios — Support is geared for the small, medium and large companies.

CPI has an outstanding Education Center in Jacksonville that provides educational programs that set the industry standard.

CPI has a user's group whose members are active and involved throughout the industry, making the group a valuable resource to every client — and to CPI — for regulatory information and industry change.

To meet the challenge of growth, you need Computer Power.

CPI Computer Power Incorporated

New US League Chief Mulls Task Force

➻ **Continued from Page 2**

thorized the establishment of real estate mortgage investment conduits, or REMICs, which are tax-exempt units that hold mortgages and issue multiclass securities representing interests in those mortgages.

The U.S. League was concerned that REMICs would cause "direct competition for deposits from government-guaranteed sources," Mr. Morris said. Money that might be deposited in savings and loans would be invested in securities instead.

But since the tax law has passed, the U.S. League is taking a different approach to REMICs, he said.

"The league will make every effort they can to use it to their advantage," he said. "If REMICs are here, we have to aid our members."

The U.S. League joined with Salomon Brothers Inc. in 1985 to form a program called Capital Access, which allowed small and midsize thrifts to tap the capital markets. The two organizations may soon be organizing a REMIC program.

"Talks are under way again with Salomon Brothers to outline something similar to Capital Access," Mr. Morris said.

While the trade group opposed the REMIC provisions, it has a positive overall outlook about the tax bill.

"Next year will be another good year for the thrift institution business, because the tax law is going to have a favorable impact on housing," he said.

Mr. Morris does not expect a major increase in interest rates or inflation in 1987, but he feels that the industry is better prepared for an upswing in rates than it was five years ago.

"The business has been working very hard at restructuring the balance sheets," he said. "The business should be in a much better position if rates should go up in the future than we were in 1981 and 1982.

"This business has really had a remarkable turnaround. I think that story's not told enough. I'm really proud of what this business has done." ■

Bank Board Approves Securities Joint Venture

Special to the American Banker

SEATTLE — Washington Mutual Savings Bank said the Federal Home Loan Bank Board approved the first joint venture agreement under which its securities brokerage affiliate will offer services to customers of another financial institution.

Under the agreement, three registered representatives of Murphey Favre, Washington Mutual's affiliate, will sell stocks, bonds, securities, insurance and other investment products in branches of First Federal Savings & Loan Association of Coeur d'Alene, Idaho. The agreement formally is between WM Financial, Washington Mutual's downstream holding company, and Gem State Financial Services Inc., First Federal's service corporation.

"Savings and loans have found it difficult to offer their customers full-service securities brokerage because of regulatory constraints," said Gene Branson, Murphey Favre president. Many have leased space to an outside brokerage firm or offered a discount-brokerage service. "We've shown that there is another way," Mr. Branson added. ■

League . . .

➻ **Continued from Page 48**

benefit plans for S&L employees; U.S. League Investment Services, a conduit to mutual funds and securities markets; and USL International, a consulting and training firm.

The league operates other affiliates on a not-for-profit basis as befits an education-oriented trade group. These include: the Institute of Financial Education, whose schools and courses reach several thousand S&L employees a year; the Financial Institutions Marketing Association, which offers products, services, and conferences for marketing officers; and the Financial Managers Society, which serves a broader range of financial institution professionals and executives. ■

Holding Companies...

➻ **Continued from Page 3**

Ohio, parent of Pioneer Savings and Loan Co., Marietta, is the oldest operating nondiversified thrift holding company. American Financial Corp., Cincinnati, parent of Hunter Savings Association, Cincinnati, is the oldest diversified thrift holding company.

A thrift holding company is any company — a partnership, trust, or corporation — which directly or indirectly controls an insured savings institution. Control is defined as owning, controlling, holding with power to vote, or having control of proxies representing more than 25% of the voting shares of an insured institution.

Direct control means that there is only one holding company in the organizational structure of the company. Indirect control means that the holding company at the apex of the organization's structure controls the thrift through one or more other holding companies. In counting holding companies, *American Banker* only counts the firm at the apex of an indirect holding company system.

A diversified thrift holding company is a unitary holding company whose subsidiary insured institution and related activities constitute less than 50% of its consolidated net worth. A nondiversified thrift holding company may be a unitary or multiple holding company. The operations of a nondiversified holding company are focused within the thrift industry and related activities.

Of the 285 active thrift holding companies operating today, 35 are diversified and 250 are nondiversified. The largest nondiversified thrift holding company and the largest thrift holding company overall is Citicorp, New York, with assets of $174 billion on Dec. 31, 1985. The largest diversified holding company, and the second largest overall, is Sears, Roebuck and Co., Chicago, with $66.4 billion in assets on Dec. 31.

On Wednesday, *American Banker* will publish a list of the 50 largest thrift holding companies based on their year-end 1985 assets.

The top five states in thrift holding companies are Texas with 64 firms, California with 35, Florida with 20, Ohio with 20, and New York with 11. Thus, 150, or almost 53% of all the active holding companies in the nation, are located in these five states.

All data shown in today's listing were compiled by *American Banker* from data provided by the Bank Board. ■

Random Thoughts

By SANFORD ROSE

Second-quarter data on the performance of the nation's insured banks provide grounds for grave uneasiness. Loan chargeoffs are up, nonperformers are up, and interest margins are down.

The rise in chargeoffs is particularly worrisome. In the first quarter of this year banks wrote off loans equal to 13 basis points of the portfolio of loans and leases. In the second quarter, writeoffs reached an astounding 35 basis points.

Since banks tend to husband their chargeoffs until yearend, the fact that they nearly tripled writedowns may foreshadow a veritable bloodletting by the fourth quarter.

Higher loss provisions and more nonperformers helped reduce the return on assets of the universe of insured banks. Additionally, the net interest margin dipped. In part, this is of course due to the impact of a rising burden of nonaccruals on gross asset yields. It may also be because the relative inflexibility of consumer deposit rates at many banks is causing asset yields to drop by slightly more than liability

Ford Is Third Largest Thrift Company

Six Other Newly Formed Firms Break into Top 50 List

By L. MICHAEL CACACE

NEW YORK — The Ford Motor Co., the nation's second largest producer of automobiles, is now the third largest thrift holding company in the country, behind Citicorp and Sears, Roebuck and Co. In addition to Ford, six other recently formed thrift holding companies joined the ranks of the top 50 thrift holding companies at yearend 1985.

These changes in the top 50 thrift firms reflect the dynamic changes under way in the industry. As reported in Monday's *American Banker,* three out of every four thrift holding companies in the United States today began operating after Dec. 31, 1981.

The surge in the formation of thrift holding companies during the past five years mainly reflects the industry's need for capital. This need was attrib-

Cooper Says Ailing Bank To Sell Italian Operation

By JOHN J. DUFFY
London Bureau

LONDON — Bank of America plans to dispose of its overseas retail banking operations as part of its effort to boost primary capital by between $750 million and $1 billion, the bank's president said here Monday.

Investment Bankers in San Francisco
Who Prefer Equity Stake
Page 32

"We will deemphasize our international retail banking activities overall, and, over time, exit most of the nondomestic markets where we have conducted consumer banking business," Thomas A. Cooper said in a speech to an international retail banking conference. Mr. Cooper is president and chief operating officer of Bank of America and president of its holding company, BankAmerica Corp.

Thomas A. Cooper

Mr. Cooper confirmed months of speculation that the bank's profitable Italian subsidiary, Banca d'America e d'Italia, is up for sale, and he strongly implied that other subsidiaries, such as the West German unit, the 32-branch Bankhaus Centrale Credit AG, might also be sold soon. Banca d'America e d'Italia has 98 branches, $4 billion in assets, and $3 billion in deposits.

Sexton Resigns in Texas

AUSTIN — James L. Sexton, commissioner of banking in Texas, resigned Monday to join a Houston-based law firm, Bracewell & Patterson. Mr. Sexton, who had been commissioner for about three years, steered the banking industry through some of its most difficult times in recent memory. His resignation follows the recent passage of an interstate banking law in Texas and a constitutional amendment permitting branch banking.

Lloyds Deal Final

LONDON — Lloyds Bank PLC completed its $200 million (U.S.) agreement to acquire 90% of the assets of Toronto-based Continental Bank of Canada. Continental was absorbed into Lloyds Bank Canada. The new bank has assets of $6.5 billion (Canadian).

Regulatory Realignments

LITTLE ROCK, Ark. — As part of an agreement with regulators to restore capital and improve earnings, Savers Federal Savings & Loan Assn. said its chief executive officer and chairman, W.P. Gulley, will retire next year. A replacement has not been named. Savers, the largest thrift in Arkansas, signed the agreement with the Federal Home Loan Bank Board after it posted third-quarter losses of $22.5 million and its capital fell below regulatory levels of $21 million. The plan also calls for Savers to be sold to Little Rock businessman Melvyn Bell for no more than $20 million... Anchorage-based Alaska National Bank of the North signed an agreement with the Comptroller of the Currency to restore profitability and to improve its capital ratio. The bank, which posted a net loss of $5.3 million in the nine months to Sept. 30, will be required to keep a capital-to-assets ratio of 6.5% until June 1987, and 7% beyond that date. The bank is suffering from nonperforming real estate loans.

Trade Penalty Levied

WASHINGTON — The Commerce Dept said Gulf International Bank, B.S.C., a federally chartered New York City branch of a Bahrainian bank, agreed to pay a penalty of $10,000 for an alleged violation of the antiboycott provisions of the Export Administration Act. The bank allegedly failed to report requests that it refrain from helping to finance sale of goods from South Africa or Israel. The act requires refusal to honor boycott requests and prompt reporting of such requests.

Puerto Rican S&L Settles

BAYAMON, P.R. — Bayamon Federal Savings & Loan Assn. said it will receive over $9.6 million as settlement for a 1985 lawsuit it filed in U.S. District Court against several securities firms. Bayamon had filed for $50 million in damages, alleging that the defendants engaged in "unauthorized, speculative activities" with two former Bayamon officers.

Stockholder Jitters About Freddie Mac's Future Are Partly to Blame for Tumble in Stock Price

By JIM McTAGUE

Washington Bureau

Mortgage Securities

WASHINGTON — A preferred stockholder of Freddie Mac tells a reporter one day that he isn't worried about the possibility of that quasi-governmental corporation severing ties with Uncle Sam and going it alone as a private enterprise.

The next day, Oct. 31, the stockholder dumps all his shares, citing uncertainty about the future of Freddie Mac, the Federal Home Loan Mortgage Corp. A small run on the stock ensues.

Recently, Freddie Mac preferred has gone into a slide, despite the mounds of adulation heaped on it by Wall Street analysts, some of whom say the security is actually worth $100 to $250 per share. It closed Friday at $59¾.

The stock has tumbled more than seven points since the middle of September, when it reached a record high of $66¾. In the past two weeks alone, it retreated nearly $3 a share. The stock currently may be owned by only savings and loan associations and market makers, which buy and sell stocks for their own accounts to maintain a balanced market.

Freddie Mac spokesmen contend that most of the selling is tax related. Several big investors, they claim, are racing to lock in big gains while they still can get favorable treatment under the existing tax code, which expires Dec. 31. The stock, boosted by strong earnings and a tax-advantaged dividend of about $4, originally was issued in 1984 at $40.

However, the Freddie Mac spokesmen also admit that some stockholders are worried about the prospects for their investment if Congress should decide to throw all or part of the secondary mortgage company to the private sector in order to level the playing field that Freddie Mac now dominates.

Major Freddie Mac Shareholders
Page 22

It was that kind of nervousness that, according to Freddie Mac, triggered the Halloween selloff. "Some of the stockholders are unsophisticated investors, and they are easily spooked," one spokesman says.

Privatization Talk Giving Some Freddie Mac Stockholders Jitters

➜ Continued from Page 3

"The guy who got scared was crazy for selling," says Maurice Mann, the chairman of the influential Freddie Mac advisory committee, which is trying to determine for the Bank Board whether privatization is feasible. Mr. Mann is also vice chairman of Merrill Lynch Capital Markets, whose parent company, Merrill Lynch & Co., as a market maker for Freddie Mac owns about 95,500 shares of its preferred stock.

Mr. Mann, who says he believes the government should be out of the mortgage business, explains: "These things don't happen overnight — particularly now when we have a Democratic Senate."

Congress watchers claim the Democrats are not particularly motivated to fiddle with agencies that have worked so well.

"I have the feeling it will be a long time before any real movement occurs toward substantial change in either agency," says Gerald Levy, the outgoing chairman of the U.S. League of Savings Institutions, an organization that is pushing for some narrowing of the role of Freddie Mac in the secondary mortgage market.

The advisory committee, which is composed of 46 industry officials appointed by the Bank Board, expects to issue recommendations for the future course of Freddie Mac in February.

A preliminary report issued in October by a committee-appointed task force, also chaired by Mr. Mann, recommended splitting Freddie Mac into two entities: one completely cut off from the government that would function as a private mortgage conduit, and a smaller operation within the government that would target mortgage credit to low-income home buyers.

The plan was thought to satisfy both those who want the agency dismantled and those who want a continued government role in mortgage funding.

Mr. Mann says the study group now is trying to determine whether the plan is both possible and practical.

Most industry people argue the scheme won't fly unless Freddie Mac's cousin and chief competitor, the Federal National Mortgage Association — Fannie Mae — also is cut off from Uncle Sam's credit rating, a relationship that allows it to raise funds on Wall Street at low, agency rates.

Fannie Mae's current leadership, which is calling for increased government participation in housing, is unlikely to go along.

The advisory group's activities provoked stockholder skittishness from the very start.

"For the moment, we intend to hold the stock," Mr. Eppinger adds. "[But] I wish they [the analysts] would give us more definitive answers."

Nearly 3,400 thrifts own shares in the corporation. The top 20 shareholders as of Sept. 26 owned between 301,594 and 95,517 shares (see table), and seven of those contacted for this story said they had no intention of selling the stock, despite unrealized gains, because they felt it was a good long-term investment.

Freddie Mac was created by Congress in 1970 to foster the growth of a residential secondary mortgage market. The corporation buys mortgages from lenders — primarily savings and loans — and sells mortgage-backed securities to investors, guaranteeing them in the process.

It was capitalized initially for $100 million by the 12 Federal Home Loan Banks, the central banks for the na-

"We had 50 or 60 calls from investors when the first articles appeared about possible privatization. We expected it," says an employee of the Freddie Mac investor relations department.

Also, several stockholders have been confused by caveats contained in otherwise glowing reports on Freddie by three different brokerage houses.

"I've had difficulty following all the advice they've been giving us," laments John Eppinger, the president and managing officer of Main Line Federal Savings, Villanova, Pa., which owns 150,000 shares.

Talk of Taking Freddie Mac Private Contributes to Fall in Stock Price

Continued from Page 22

tion's thrifts, which in turn are supervised by the three-member Federal Home Loan Bank Board. The Bank Board members also serve as Freddie Mac's board of directors.

In December 1984, the Freddie Mac board decided to transfer the corporation's appreciated value to the savings and loan industry, resulting in the issuance of the preferred stock.

Critics in the thrift industry contend that Freddie Mac and other government-created mortgage conduits have done their job too well, driving private mortgage conduits out of the market as well as offering fixed-rate mortgages at prices so low that it is hurting big California thrifts that want to originate adjustable-rate loans.

A recent study by the staff of the Board of Governors of the Federal Reserve System substantiated several of these complaints. Researchers found that private residential pass-through issuance totaled $5 billion in 1985, compared with $108 billion guaranteed by Freddie Mac, Fannie Mae, and the Government National Mortgage Association — known as Ginnie Mae.

A prime reason, according to the study, is that "investors are willing to accept lower yields on agency securities because they believe it unlikely that the federal government would permit a sponsored agency to default."

Critics contend that the agency's access to cheap financing amounts to a government subsidy that results in a 50-basis-point market advantage to underwriters offering conforming loans.

The same study said that the private sector had a large role in its own undoing. The 1985 default of Equity Programs Investment Corp. and the $95 million loss by Bank of America stemming from its role as trustee and escrow agent for pools of privately-insured mortgage loans "worked against prospective private issuers," the report noted.

Freddie Mac and Fannie Mae now handle about 52% of all mortgages originated in the country, according to Dennis Jacobe, an economist with the U.S. League of Savings Institutions, the nation's largest savings and loan trade organization. Those mortgages can be as high as $133,250, and the league expects the maximum, which is pegged to an index of housing prices, might top $150,000 in January, further diminishing the market share of nonconforming issuers.

The Reagan administration, which philosophically favors reducing government involvement in the marketplace, had proposed charging Freddie and Fannie fees to bring their costs in line with private issuers. Congress, in an election year, balked at the proposal, however, which would have resulted in higher mortgage rates for its constituents.

Freddie Mac critics then focused their attention on the Bank Board and the advisory council.

Mr. Mann says the impetus for the study came "from all kinds of people."

"Obviously, the biggest mouths were S&Ls who want to be portfolio lenders," he says.

Portfolio lenders want to originate adjustable-rate loans and keep them for profit. They claim their market shrinks dramatically every time Freddie Mac and Fannie Mae raise the maximum dollar amounts on mortgages that they are willing to guarantee.

Most stockholders seem to want the best of both worlds — wider distribution of Freddie Mac stock without severing the corporation's Bank Board connection, which enables it to float debt at government agency rates. If the Bank Board adopted this plan, Freddie Mac would be exactly like Fannie Mae, whose shares are traded freely on the New York Stock Exchange.

Robert Hottensen Jr., an analyst with Goldman, Sachs & Co., predicted in a research report last month that wider distribution of Freddie Mac stock might cause it to soar to $250 per share and "the enhanced value would provide many thrifts with an entire year's worth of earnings."

Mr. Hottensen's optimistic prediction fired the imaginations of many stockholders. It has special appeal now because the Bank Board is requiring thrifts to raise their capital levels.

"The security should be allowed to reach its zenith," says William Shuett, president and chief executive officer for the Security Savings and Loan Association, Milwaukee, which owns about 107,630 shares. "It would be an instant and effortless enhancement of the balance sheets of the nation's S&Ls."

"I'm a stockholder, and I want a maximum return," says Norman Coulson, the president of the Glendale Federal Savings and Loan Association, Glendale, Calif., which owns about 98,400 shares of the preferred stock.

"If we go private and maintain the government backing, we'd be just like Fannie Mae. Then the question is, do we need two such agencies?" Mr. Coulson says.

Mr. Mann says he doesn't like this halfway approach to privatization because he sees it giving stockholders the unfair advantage of an implicit federal guarantee for their company.

The analysts warn, however, that a complete break with the government would create worries about the value of Freddie Mac stock. It is this prospect that bothers investors most.

"Depending on how they do it, they could screw up the value of the stock," agrees Bud Koch, the president of the First Federal Savings Bank, Cleveland, owner of 175,000 shares.

"Obviously, we're concerned," Mr. Koch adds. "But if we were very concerned, we wouldn't be such a large stockholder."

Mr. Koch says his company intends to hold the stock as an investment because "we think it has almost zilch downside risk because of the big dividend it pays."

Based on the record amounts of business by Freddie Mac this year, one might assume that the majority of savings and loans are happy with Freddie Mac just the way it is. One of the satisfied customers is the Western Federal Savings and Loan Association, Marina Del Rey, Calif. Its president, Robert Thompson, is "not much for Freddie Mac going private."

"I don't see any advantage. Freddie was formed to help S&Ls, and it has done the job," Mr. Thompson says. "If it ain't broke, don't fix it.

"I think over a period of years, we'd make more money on a deal basis with Freddie Mac the way it is than we would if the stock tripled," adds Mr. Thompson, whose institution owns 118,901 shares. ■

You need opportunities for increased earnings that cash management alone can't offer.
You need Irving Trust Treasury Services.

Report from
Number One Wall Street

"What do you do—short or mid-term—with the funds cash management services make available?" asks Ken Soldwedel, Senior Vice President.

"We created Irving Trust Treasury Services to provide answers. So now you'll have cash management's improved cash flow *plus* opportunities to invest and earn money with the excess cash on hand."

Irving Trust Treasury Services can help you invest in and manage securities; gain access to international trade transaction opportunities; extend letters of credit; issue commercial paper and much more.

And because Irving Trust is a leader in electronic systems, you'll have access to state-of-the-art automation. Using our IBM-PC based micro/CA$H-Register system or S.W.I.F.T., you can monitor balances throughout the day, fully automate funds transfers and letters of credit and issue commercial paper. Our automated links to the interbank communication and funds transfer networks provide additional on-line, executional support. And our operations center is unsurpassed for speed, accuracy and service.

Ken Soldwedel, SVP, and Irving Trust Treasury Services help your cash work harder.

For more information, write or call Kenneth J. Soldwedel, SVP, Irving Trust, One Wall Street, New York, NY 10015. 212/815-6300.

Thrift Holding Company is a company controlling an insured savings and loan or savings bank. Control is defined as owning, controlling, holding with power to vote, or having control of proxies representing more than 25% of the voting shares of an insured insitution. Direct control means that there is only one holding company in the organizational structure of the company. Indirect control means that the holding company at the apex of the organization controls the thrift institution through one or more other holding companies. **Total Assets** are consolidated assets for the parent company and all its subsidiaries, whenever possible. However, some holding companies do not report consolidated assets including their thrift subsidiaries. Some indirect holding companies, for example, have established financial services holding companies, which are the direct parent of the thrift subsidiary. In these cases, the assets for the financial services holding companies are used, whenever possible. **Thrift Deposits Controlled** are the total deposits of holding company's thrift subsidiary. For multiple thrift holding companies, coimbined total deposits for all of these subsidiaries are used, whenever possible. **Net Income:** income after taxes and loan loss provisions, but before extraordinary items is used. If a company has more than one thrift subsidiary, the combined net income for all of these institutions is used, whenever possible. **(a) — Types:** D—Diversified, N—Non-Diversified. **A diversified thrift holding company** is a unitary holding company whose subsidiary insured institution and related activities constitute less than 50% of its consolidated net worth. **A nondiversified thrift holding company** may be a unitary or multiple holding company. The operations of a nondiversified holding company are focused within the thrift industry and related activities. **(b)** — If a holding company owns more than one savings institution, as indicated in the last column, the name of the largest institution is reported below the name of the company. **(c)** — Also owns Citicorp Savings, FS& LA, San Francisco, and Citicorp Savings of Florida, FS& LA, Miami. **(d)** — Ford Motor Co. acquired First Nationwide Savings from National Intergroup, Inc., Pittsburgh, in August, 1985, for $493 million. **(e)** — Also owns California Thrift & Loan. **(f)** — Also owns Gibraltar Savings of Washington FA, Seattle. **(g)** — Also owns First Texas Savings Association, Dallas. FHLBB lists head office of the company as Wilmington, Del. **(h)** — FHLBB lists head office of the company as Palm Beach, Fla. **(i)** —Also owns American Savings Association of Kansas, Wichita. **(j)** — FHLBB lists top holding company as MCO Holdings Federated Development Co., Houston. **(k)** — Asset data are for fiscal year ending July 31 for the company and its significant majority-owned affiliates other than its finance subsidiary, Associates First Capital Corp. Associates First Capital Corp. is the immediate parent of its thrift. **(l)** — Also owns Old Stone Savings & Loan, High Point, N.C. and Old Stone Bank of Washington FSB. The FHLBB did not list Old Stone Savings & Loan, High Point, N.C., as a thrift controlled by Old Stone Corp. **(m)** — FHLBB lists top holding company as FGI Voting Trust, Miami. **(n)** — Net income figures are for the six months ended 12/31/85. Also, FHLBB lists top parent company as South Mark Corp., Dallas. **(o)** — FHLBB lists head office as Englewood. **(p)** — FHLBB lists top parent company as Heron International N.V., London. **(q)** — Company began operations 6/19/85. Net Income is from that date to yearend 1985. **(r)** — FHLBB lists top parent as Dana Corp., Toledo. **(s)** — Company was not on FHLBB list of active thrift holding companies. **(t)** — Also owns Metropolitan Federal Savings Bank of Moorhead. **(u)** — FHLBB lists top holding company as Landmark Subco, Inc., Wilmington, Del. **(†)** — Data are for the fiscal year ending 6/30/86. **( )** — Indicates a net loss. **(N.A.)** — Not available.

Seven New Thrift Companies Join Top 50 List

Continued from Page 1

utable primarily to the period of unprofitability in the industry during the early 1980s.

To obtain the needed capital, many thrifts converted from the mutual form of ownership to stock ownership. As part of this conversion, most of these thrifts formed holding companies.

These are some of the findings of the *American Banker's* annual survey of the 50 largest thrift holding companies published today. On Monday, a listing gleaned from various data sources of the Federal Home Loan Bank Board identified all active thrift holding companies in the nation.

Ford Motor Co. became a thrift holding company in August 1985, when it acquired the First Nationwide Bank FSB, San Francisco, from National Intergroup Inc., Pittsburgh, for $493 million. First Nationwide is the nation's eighth largest thrift, with $9.7 billion in deposits as of June 30, 1986.

The largest of the six newly formed holding companies to rank among the top 50 is GlenFed Inc., Glendale, Calif. GlenFed, which began operation on Dec. 31, 1985, is the parent of the nation's sixth largest thrift, the $11.7 billion-deposit Glendale Federal Savings & Loan Association. GlenFed ranked seventh among thrift holding companies, with $19 billion in assets at yearend 1985.

The other five new holding companies are: the 22d-ranked Pacific First Financial Corp., Tacoma, Wash., parent of the Pacific First Federal Savings Bank; the 38th-ranked Citizens Financial Group Inc., Providence, R.I., parent of the Citizens Savings Bank FSB, also Providence; the 39th-ranked First Financial Corp., Stevens Point, Wis., parent of the First Financial Savings Association, Stevens Point; the 41st-ranked Puget Sound Bancorp, Tacoma, Wash., parent of the Savings Bank of Puget Sound, Seattle; and the 42d-ranked Metropolitan Financial Corp., Fargo, N.D., parent of the Metropolitan Federal Bank FSB, Fargo.

Citicorp, New York, the nation's largest banking firm, is also the largest thrift holding company, with $173.6 billion in assets on Dec. 31. Last year, Citicorp owned three thrifts, with combined deposits of $8.4 billion at yearend.

The three thrifts it owned are: Citicorp Savings of Illinois, Chicago, which ranked 31st among the top thrifts at midyear 1986, with $3.7 billion in deposits; Citicorp Savings, San Francisco, which ranked 45th, with $3.2 billion in deposits; and Citicorp Savings of Florida, Miami, the nation's 91st largest thrift, with $1.9 billion in deposits.

A nondiversified thrift holding company is one whose business activities are focused within the thrift industry and related activities, according to Federal Home Loan Bank Board definitions.

Sears, Roebuck and Co., Chicago, is the largest diversified holding company and second largest thrift holding company overall, with $66.4 billion in assets. Sears owns the nation's 18th largest thrift, the $5.1 billion-deposit Sears Savings Bank, Glendale, Calif.

A diversified thrift holding company is a unitary holding company whose insured subsidiary thrift and related activities constitute less than 50% of its consolidated net worth.

Other Survey Results

- Assets of the top 50 thrift holding companies were $540.5 billion on Dec. 31, 1985, up 17.2% from $461 billion for the top 50 firms a year earlier.
- The top 50 firms controlled 59 thrifts with $190.1 billion in deposits on Dec. 31, 1985. A year earlier, the top 50 firms controlled 58 thrifts with $184 billion in deposits.
- The top 50 companies controlled 20.3% of the entire thrift industry's deposits of $938 billion at yearend 1985. This ratio was unchanged from 1984.
- The top 50 firms consisted of 44 nondiversified companies with combined assets of $416.9 billion and six diversified companies with combined assets of $123.6 billion. A year earlier, the top 50 firms had 45 nondiversified companies with assets of $378.1 billion and five diversified companies with assets of $82.9 billion.
- The largest gain in rank was posted by the Old Stone Corp., Providence, R.I. Its assets rose 41% to $3.7 billion at yearend 1985 from $2.6 billion, to move up six places in rank to 21st position.

In October 1984, the Old Stone Bank, a commercial bank, converted into a federal savings bank. Old Stone Bank FSB is the nation's 73d largest thrift, with $2.1 billion in deposits at midyear. ■

SeaFirst Unit to Return Capital

SEATTLE — SeaFirst International, Seattle-First National Bank's Edge Act operation, has been granted Federal Reserve Board permission to return $10 million of capital to the SeaFirst Corp., a SeaFirst spokeswoman said. About $4 million of capital remains in the Edge Act subsidiary, according to a Fed filing.

The Edge Act activities are centered in Portland, Ore., where SeaFirst also has a loan-production office. "A lot of the business done in Portland is actually booked in Seattle," the spokeswoman said, adding that the Edge Act unit was overcapitalized as a result.

Of the withdrawal of capital, she said: "It was more of a cash-management thing than anything else." ■

Strategic Dates

Jan. 1, 1987

FDIC DISCLOSURE RULE: The Federal Deposit Insurance Corp.'s new rule, which will disclose disciplinary actions taken against the 8,850 banks it regulates, takes effect starting today. The action, which had been originally set to take effect last July, has been bitterly opposed by the banking industry. Under the rule, whenever the FDIC enters a final enforcement action against a bank, the agency will make the information available to the public almost immediately.

SHORT TERM FLOATING RATE NOTES

$250,000,000

Dated November 13, 1986
Price 100%

Due May 14, 1987
Series 5-87

The interest rate of the Notes will be subject to weekly adjustment on the calendar day following each auction of 91-day Treasury bills, and will be equal to 30 basis points above the "91-Day Treasury Bill Rate" (expressed on a bond equivalent basis). Interest on the Notes is paid at maturity and accrues from November 13, 1986. The Notes are definitive securities and will be issued only in bearer form.

These notes are the obligations of the Student Loan Marketing Association, a federally chartered, stockholder-owned corporation, and are not obligations of or guaranteed by the United States. The Notes are legal for investment by savings banks, insurance companies, trustees and other fiduciaries under the law of many states.

This offering is made by the Student Loan Marketing Association with the assistance of a nationwide Selling Group of recognized dealers in securities.

MCorp Dips Into Euromarket with FDIC-Backed CDs

Other Oil Patch Banks Probably Could Do Same Kind of Deal

By JOHN J. DUFFY
London Bureau

LONDON — MCorp, the troubled Texas bank holding company, is breaking new ground by issuing the first certificates of deposit in the Euromarkets to carry the effective backing of the Federal Deposit Insurance Corp.

Raising Capital

The novel financing method is believed to be one that other banks in the U.S. Southwest could use to bolster their base of foreign deposits. Such deposits have been eroding over the past year because of worries overseas about the impact of falling oil prices on the banks' loan portfolios.

Clarke Speaks on Texas Acquisitions
Page 7

The financing "brings in a larger universe of depositors," said Ken Shaver, assistant Treasurer at MCorp. "People who had redlined Texas, and with good reason, are interested in the deal because they see the backing is really the U.S. government."

MCorp, the largest bank holding company in Texas, has been hit hard by the slump in the oil patch. The company lost $91 million in the first nine months of 1986 and recently voted to suspend common stock dividend payments.

The complex CD financing, which is being arranged by Credit Suisse First Boston, has been structured to help the bank maintain its financing links overseas in the face of such adverse news, said observers here.

The deal consists of 60 FDIC-in-

Commercial Banks Shrank Loans To Farm Sector in First Quarter

Top 100 Banks in Agricultural Lending

Summary Data: March 31, 1986 Versus March 31, 1985
(Dollar Amounts in Millions)

	3/31/86	3/31/85	% Chg.
Total Agricultural Loans	$9,375	$10,200	– 8.09
Agricultural Production Loans	7,781	8,864	–12.22
Gross Interest Income from Ag. Production Loans	191	251	–23.75
Chargeoffs on Agricultural Production Loans	71	47	+51.15
Bad Agricultural Loans	849	564	+50.32

Bad loans: At least 90 days past due, nonaccruals, and renegotiations.

By RICHARD RINGER
Midwest Bureau

CHICAGO — Flush with money to lend, the commercial banks that provide a large amount of the total financing to agriculture face a dilemma.

In the first quarter of 1986 their agricultural loan total fell by more than $1 billion from the same period a year earlier, according to data compiled by the *American Banker.*

The continued heavy cutbacks in agricultural lending can do little to help the financial condition of many of the more than 4,800 commercial banks that finance agriculture. During the first quarter of the year, their bad farm loans and chargeoffs soared while net income from agricultural loans plummeted, according to the survey results. The first quarter of each year is crucial for lenders and farmers, who typically seek the lending commitments for another year of business before spring planting.

Despite tightening the clamp on agricultural lending, another bumper crop is being harvested this fall. This comes on top of record crop harvests the previous three years — years when agricultural banks also slashed their total amount of farm lending.

The implications are grim. Another huge harvest means a continuation of depressed commodity prices. Farmers' income would be reduced, making it more difficult for them to make full repayment of their debts.

"We are forecasting low grain prices in 1987, and lower in 1988 and a slight rise in 1989, '90, and '91," James Cole, a senior commodity analyst with the U.S. Department of Agriculture recently told a group of bankers in Nebraska, one of the states hit hardest by the most severe agricultural depression in 50 years. Some farm banks can't wait for even a modest upturn in commodity prices. Already teetering on the edge of insolvency, some of these banks will fail before commodity prices rise, adding to an already long list of closed farm banks.

Hawkeye Misses Debt Deadline
Page 8

The Federal Deposit Insurance Corp. had 1,156 banks on its problem bank list when the new borrowing season began in March. More than 460, about 40%, were agricultural banks. The list includes banks that have varying degrees of financial and management problems that warrant closer supervision.

So far this year, 55 of the 123 banks that have failed were farm banks, or an average of more than one failed farm bank each week. Some of the banks on

"I've heard that for credit card program flexibility, there's only one company to call. It's something like Franklindun Financial."

Franklinton Financial Services is the company that has quietly become one of the major forces of the credit card processing industry in only five years. The reasons? Credit card program expertise; competitive pricing; program flexibility options; and most of all, success that can be seen in our customers' profits.

If you are considering starting your own credit card program, or if you aren't happy with the performance of your present processor, Franklinton offers you a variety of service levels.

We can do it all, from initial planning through maintenance. Including design, production, merchandising and processing. And if that's more service than you need, we also offer more streamlined plans. All custom tailored to your requirements.

If Franklinton sounds like a name you should know, remember this name, Joette K. Kuharic. Just call her at 614/863-8222 and she'll tell you how Franklinton can help. Franklinton Financial Services, a division of BancOhio National Bank, 4661 East Main Street, Columbus, Ohio 43251.

It's "FRANKLINTON." And the word is getting around.

Data Source: The federal regulatory report of condition for all insured commercial banks. These data were provided to American Banker by **ADP's Data Services Division, New York.** Please note that ADP adjusts 1985 data for mergers ocurring in 1986. **Total Agricultural Loans** are the sum of loans secured by farmland (Schedule RC-C, item 1.b., Column B—Domestic Offices) plus loans to finance agricultural production and other loans to farmers (Schedule RC-C, item 3, Column A—Consolidated Bank). **Loans secured by farmland** include loans secured by farmland and improvements thereon, as evidenced by mortgages or other liens. **Loans to finance agricultural production and other loans to farmers** are loans for the purpose of financing agricultural production. Included are both secured (by other than real estate) and unsecured loans made to farm and ranch owners and operators (including tenants) or to nonfarmers. **Total Loans** are total loans and leases net of unearned income that are booked in a bank's domestic offices only. (Schedule RC-C, item 12, Column B).

Lending to Agriculture Declines, but Losses Keep Mounting

→ Continued from Page 1

the *American Banker* list have failed since publishing their first-quarter results. The largest to fail was the First National Bank and Trust Company of Oklahoma City, the country's 17th largest commercial bank in total agricultural lending at the end of March. Like many other commercial bank lenders to agriculture, First National, which was closed in July, had reduced its total farm loans at the end of the first quarter to $126.5 million, a 26.73% decline from $172.7 million during the comparable period in 1985.

At the same time, First National's net interest income from farm loans plunged to $2.7 million, a 50.7% decline from $5.5 million at the end of the first quarter of 1985. And First National had a net chargeoff on agricultural loans of slightly more than $1 million, a 1,703% reversal from $65,000 in recoveries on farm loan writeoffs in the first quarter last year.

The problem agricultural loans, coupled with losses on energy and real estate loans, led to the demise of the $1.6 billion-asset First National, making it the second largest commercial bank failure in U.S. history.

Bank of America Cuts Loans

Bank of America, the largest commercial bank in terms of outstanding agricultural loans, reduced its agricultural loan portfolio by more than 25% during the first quarter to $1.4 billion from $1.9 billion in the same period last year. But farm loan chargeoffs soared 114% to $15 million in the quarter from $7 million in the first quarter of 1985. And net interest income on agricultural loans dropped 40% in the quarter to $24 million from $40 million the same time last year.

Analysts say Bank of America's hefty but deteriorating agricultural loan portfolio has contributed to the company's poor earnings in recent years, a condition making the bank vulnerable to the takeover effort of First Interstate Bancorp.

Bank of America and the other banks that comprised the top 100 farm banks in terms of loans reduced their farm lending to $9.3 billion in the first quarter, an 8.09% decline from $10.2 billion in the comparable period in 1985, according to the *American Banker*. Among those banks with 25% or more of their loans related to agriculture — those that are commonly described as agricultural banks — total farm lending declined to $787.9 million, a 3.03% decline from $812.5 million in the first quarter last year.

Of the top 100 commercial bank lenders to agriculture, 54 committed less to financing agriculture in the first quarter of 1986 compared with last year's first quarter. Among banks with a loan portfolio consisting of 25% or more in agricultural loans, 57 of the top 100 had lower farm-related loans compared with the same time last year.

Even steeper declines were posted by agricultural banks in the category of loans to finance production, which is a subset of the aggregate agricultural loan category. The top 100 banks with the highest dollar volume in agriculture loans reduced loans to finance agriculture to $7.7 billion in the first quarter, a 12.22% decline from $8.8 billion at the end of last year's first quarter.

Of the top 100 banks in total farm loan volume, 55 reduced their level of agricultural production loans in this year's first quarter compared with the same time a year ago.

And among banks with 25% or more of their loan portfolio tied to agriculture, the decline in loans to finance agricultural production was 6.25% to $718 million from $766 million in the first three months of 1985. And 67 of the top 100 banks in this category reduced their lending to finance agricultural production.

The decline in total dollars for agricultural lending during this year's first quarter continued the trend of reduced farm financing by commercial banks that began in 1983. Ironically, the continuing cutbacks in farm lending come at a time when many of these farm banks are flush with cash and desperately seeking to make loans.

Loan-to-Deposit Ratios Down

A survey of 530 agricultural banks in the heavily agricultural Seventh Federal Reserve District — an area that includes Iowa, the southern two-thirds of Wisconsin, the northern two-thirds of Illinois and Indiana, and all of lower Michigan — early this year showed that three-fourths of the survey respondents indicated that the ratio of loans to deposits at their banks was below the preferred level. Likewise, earlier this year in another agricultural region, the Tenth Federal Reserve District — Nebraska, Kansas, Oklahoma, western Missouri, Colorado, Wyoming, and northern New Mexico — a survey by the Federal Reserve Bank of Kansas City indicated that the average loan-to-deposit ratio for agricultural banks dropped to 52.5%, the lowest level in the 10 years that the survey has been conducted.

There are numerous reasons for the decline in agricultural lending, according to bankers, researchers, and analysts. For starters, there are fewer farmers in business. The farm crisis already has weeded out the least profitable, most highly leveraged, and most marginal farm operators. Some estimates are that two of every 10 farmers last year either voluntarily quit farming or were forced out of business.

Some farmers, particularly those who are more financially stable, also paid off their debts, helping to reduce the amount of farm loans outstanding. Other farmers also used borrowings from other sources, including the Commodity Credit Corp. and other federal agencies, to repay debts at commercial banks.

Farmers also have undergone what Neil Harl, an agricultural economist at Iowa State University, terms a "fundamental change in the attitude toward risk."

Mr. Harl said today's farmer is risk adverse when it comes to borrowing. "So many have been burned or have come closer to the heat" that many farmers are reluctant to take on the risk of borrowing, he said.

He predicted that it will take at least two generations of farmers to return to the level of risk-taking that farmers exhibited only a few years ago.

Bankers, too, are increasingly cautious in lending to those farmers who remain in business. The bankers prefer to finance only those farmers who exhibit an ability to turn a profit, as opposed to years earlier when the value of a farmer's assets was the criterion for

Last year America's largest lender service company looked back proudly on 50 years of progress

Now we approach our future with even greater confidence

In 1985 Yegen Associates celebrated 50 years of serving America's financial community.

That makes Yegen America's original lender service company. Last year Yegen generated $1.2 billion in new consumer lending for our member institutions.

Now a new group of investors has acquired the firm. The commitment and supporting resources represented by the involvement of these new owners promises even greater productivity for lending institutions active in Yegen's service programs:

Automobile Financing • Automobile Leasing • Home Equity Financing
Home Improvement Financing • Manufactured Housing Financing
Marine Financing • Recreational Vehicle Financing • Residential First Mortgage
Resort Timesharing/Camping Resort Membership

To learn how America's oldest and largest lender service company can add profitable consumer financing contracts to your portfolio, call Maureen Coleman, Vice President, at (201) 794-7450.

Yegen's reputation as a lender service company is unmatched by any in the industry. Now our future—and that of our member institutions—looks brighter than ever.

Yegen Associates, Inc
23-00 Route 208 South
Fair Lawn, New Jersey 07410

The top 100 banks listed in order of domestic agricultural loans outstanding on 3/31/86. The banks were drawn from the universe of all insured commercial banks in the U.S. **Data Source:** The federal regulatory report of income from **ADP's Data Services Division, New York.** Please note that ADP adjusts 1985 data for mergers ocurring in 1986. **Interest income from farm loans** is gross interest and fee income on loans to finance agricultural production, booked in domestic offices. Data are for the first quarter of 1986 and 1985, respectively, and are from Schedule RI-Report of Income, item 1.a.(1).(c). **total interest income** is total gross interest income for the bank from all of its operations both domestic and foreign. It is taken from Schedule RI, item 1.g. **Charge-offs on Farm Loans** are net charge-offs (charge-offs minus recoveries) on loans to finance agricultural production both domestic and foreign. These data are for the first quarter of 1986 and 1985, respectively, and are from Schedule RI-B, item 3. **Charge-offs on all loans** are net charge-offs (charge-offs minus recoveries) on all loans both domestic and foreign. These data are for the first quarter of 1986 and 1985, respectively, and are from Schedule RI-B, item 9.

Top 100 Banks in Agricultural Loans

Bad Farm Loans, Total Bad Loans, and Bad Loan Ratio Based on Loans Outstanding March 31, 1986, Compared with March 31, 1985

The top 100 banks listed in order of domestic agricultural loans outstanding on 3/31/86. The banks were drawn from the universe of all insured commercial banks in the U.S. **Data Source:** All data were taken from the federal regulatory report of condition for all insured commercial banks from **ADP's Data Services Division, New York.** Please note that ADP adjusts 1985 data for mergers ocurring in 1986. **Bad farm loans** are domestic farm loans to finance agricultural production that are past due 90 days or more and still accruing; plus nonaccruing loans; plus renegotiated, or "troubled" debt. (Schedule RC-N, item 1d, Columns B, C, and D). **Total bad loans** are all domestic loans that are past due 90 days or more and still accruing; plus nonaccruing loans; plus renegotiated, or "troubled" debt.(Schedule N, item 3- Total; minus item 2- in foreign offices). **Bad Farm Loan Ratio** is calculated by dividing bad farm loans by total domestic loans.

Opportunities for Rural Banks Decline as Farms Disappear

➔ Continued from Page 11

determining how much the farmer could borrow.

A collapse in farmland values, up to 60% in some parts of the Midwest, also has lowered the amount of farm lending. Farmland is often the collateral for agricultural loans. With falling real estate values, a farmer can't borrow as much against his property.

In addition, a fundamental shift in the demand for credit has lowered farm lending totals. Capital expenditures have declined, especially for big ticket items such as machinery. The cost of inputs has also declined; fertilizer is an example. With the steep fall in oil prices early this year, the cost of many petroleum-based fertilizers or those extracted from petroleum products also has dropped. So, too, has the price of diesel fuel and gasoline used to operate machinery.

Finally, commercial banks have reduced outstanding farm credits through the painful and costly process of charging off huge amounts of agricultural loans. According to the *American Banker* data, the top 100 lenders to agriculture in the first quarter wrote off agricultural loans totaling $71.3 million, a 51.15% increase from $47.2 million in the first quarter of last year. Of the top 100 agricultural lenders, 46 increased their volume of farm loan chargeoffs during the first quarter of 1986, compared with the same quarter a year earlier. Another 33 of the top 100 lenders reduced their farm loan chargeoffs, while tallies for the remaining 21 banks could not be determined.

Among banks with 25% or more of loans tied to agriculture, nearly 14% of their aggregate total of $698.7 million in agricultural loans in the first quarter were considered bad loans. A bad loan is one that is 90 days or more past due, not accruing interest, or is renegotiated.

Although the decline in farm lending among what are generally considered farm banks — those with a quarter of their loans tied to agriculture — was not as dramatic as the decline posted by the largest commercial bank lenders to farming, the decline among the smaller banks was in some ways more significant. These banks typically are located in the Midwest, the country's agricultural heartland where farming is not only a way of life but the dominant business. And the commercial bank in many of these small rural towns is the economic lifeline for the community.

But the economic pulse of many of the rural farm communities is beating slowly. Overall loan demand, both consumer and business, is down. Those banks with a quarter of their loan portfolio tied to agriculture not only reported a drop in farm loans in the first quarter, but also a steep decline in total loans. Total loans for banks in this category fell 4.12% in the first quarter to $953 million from $994 million during the same time last year.

With the banks unable or unwilling to commit funds to financing farming and other business, and with little prospect of diversifying into other types of lending, the future vitality of many of these rural farm communities is in jeopardy. For many of these communities a bleak future is likely.

The American Bankers Association earlier this year published a report predicting agricultural banking would be conducted in fewer trade centers as the number of medium-size farms continues to decline. The task for bankers is not only to identify those centers where they can do business, but also become more sophisticated and aggressive in order to survive, report said.

The report also predicted that, by 1995, the competition between commercial banks and the Farm Credit System will become even keener. The Farm Credit System already is the largest supplier of agricultural credit with $59.2 billion in outstanding loans at the end of 1985, compared to commercial banks, which rank second with $46.9 billion.

The strong loyalty rural banks traditionally have enjoyed with their farmer borrowers also will be tested in the years to come. Farmers, wanting and needing more than financing, will flock toward one-stop providers of a multitude of services, the American Bankers Association report concludes.

The near-term outlook for agricultural bankers isn't much better. While there are some signs of a slackening in the prolonged agricultural downturn, no one is prepared to forecast any marked improvements. Said Gary L. Benjamin, a research economist at the Federal Reserve Bank of Chicago, "Lenders haven't worked their way through all the problems yet." ■

Dear Reader, How Are We Doing?

American Banker wants very much to provide you with articles that are both interesting and useful in our surveys. Would you take a moment to give us some feedback on today's survey on **AGRICULTURAL LENDING**? Please return this questionnaire to William Zimmerman, Editor, American Banker, One State Street Plaza, New York, N.Y. 10004 (212-943-5712).

(1.) How useful was the information in this survey?

(A) Very Useful ☐ (B) Useful ☐ (C) Not Useful ☐

(2.) What do you like **best** about the survey?

____

(3.) What do you like **least** about the survey?

____

(4.) What themes or topics would you like to see explored in future surveys?

____

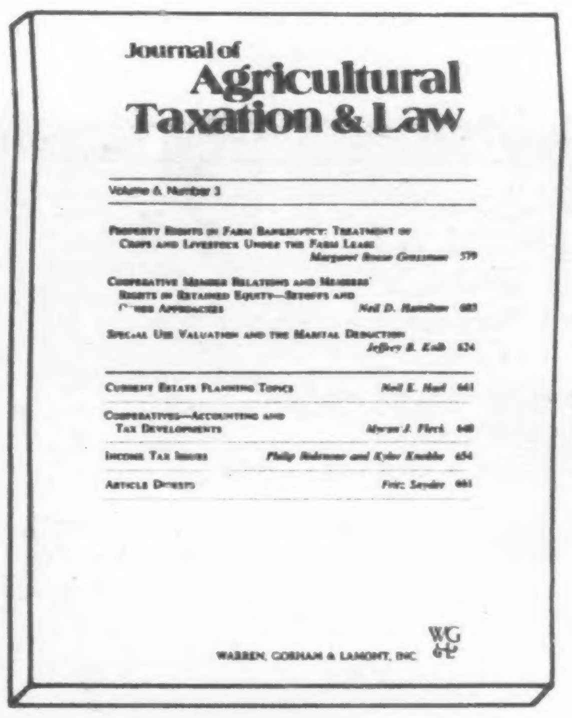
Only one journal covers the tax, legal and financial concerns of your agribusiness clients…

The Journal of Agricultural Taxation & Law

Your agribusiness clients don't have ordinary information needs, and the *Journal of Agricultural Taxation & Law* is no ordinary publication. It's the only journal devoted entirely to their unique concerns.

Each quarterly issue brings you essential, on-target analysis and advice that can help your clients achieve significant tax savings and avoid legal pitfalls regardless of economic conditions. The *Journal* brings you workable, proven solutions to your clients' problems. Tax questions, legal and regulatory developments, and financial planning are all fully covered by the nation's leading practitioners.

You'll get authoritative guidance in such areas as:
- Deferred Payment Contracts
- Deductions for Prepaid Fee Expenses
- QTIP Property in Farm Estates
- Product Liability Suits and Injuries
- Agricultural Cooperatives
- Joint Tenancy for Farm Ownership
- Misdelivered Commodities
- The Farm Debtor in Workout Situations
- AND MUCH, MUCH MORE!



A WG&L Publication
$85.50 per year, quarterly

For the purposes of this survey, agricultural banks are defined as banks with 25% or more of their loans in agricultural lending. Data Source: All data were taken from the federal regulatory report of condition for all insured commercial banks from ADP's Data Services Division, New York. Please note that ADP adjusts 1985 data for mergers ocurring in 1986. Total Agricultural Loans are the sum of loans secured by farmland (Schedule RC-C, item 1.b., Column B—Domestic Offices) plus loans to finance agricultural production and other loans to farmers (Schedule RC-C, Item 3, Column A—Consolidated Bank). Total Loans are total loans and leases net of unearned income that are booked in a bank's domestic offices only. (Schedule RC-C, item 12, Column B). Bad farm loans are domestic farm loans to finance agricultural production that are past due 90 days or more and still accruing; plus nonaccruing loans; plus renegotiated, or "troubled" debt.

	TOTALS FOR THE 100 BANKS IN FARM LOAN LOSSES	**9.80**	**98,060**	**698,770**	**762,409**	**-8.35**	**1,000,852**	**1,104,096**	**-9.35**

Banks were drawn from the universe of banks with 25% or more of their loans in agriculture in the 13 leading farm states. The states and the 315 banks in this universe are listed on pages 18 and 20. **Data Source:** All data were taken from the federal regulatory report of condition for all insured commercial banks and provided by **ADP's Data Services Division, New York.** ADP adjusts 1985 data for mergers ocurring in 1986. **Bad Loan Ratio** is calculated by dividing bad farm loans by total domestic loans.

Bad farm loans are domestic farm loans to finance agricultural production that are past due 90 days or more and still accruing; plus nonaccruing loans; plus renegotiated, or "troubled" debt. **Agricultural Loans** are the sum of loans secured by farmland plus loans to finance agricultural production and other loans to farmers. **Total Domestic Loans** are total loans and leases net of unearned income that are booked in a bank's domestic offices only.

Summary of Survey Findings

Top 100 Banks in Agricultural Lending

Based on Total Domestic Agricultural Loans Outstanding at all Insured U.S. Banks

Most Consumers Say Charging For Machine Use Is Unreasonable

By MICHAEL WEINSTEIN

NEW YORK — A majority of consumers think that it is unreasonable for banks to charge them for automated teller machine transactions at a time when more and more banks are levying such fees, according to a survey commissioned by the *American Banker.*

But some bankers think that consumers are willing to pay for the convenience of using the machines. And ATM fees contribute to banks' noninterest income — an increasingly important source of revenue for the industry.

AN American Banker SURVEY

Other bankers, however, oppose ATM fees, saying that the charges will deter customers from using the machines and defeat the purpose of installing the equipment.

The newspaper's third annual survey, "How Consumer America Views the Changing Financial Services Industry," gauged attitudes on a range of issues in the financial services industry. The nationwide telephone survey polled 1,028 adults between May 30 and June 18. It was conducted by Reichman Research Inc., an opinion research firm in New York City and San Francisco.

This is the last in a series of articles on the survey results. Other findings were released in September and October.

"Consumers have proved to be relatively insensitive to pricing of ATM transaction services, within reason," says Douglas D. Anderson, senior vice president at the Philadelphia National Bank. "Financial institutions can indeed do it."

Fed Is Exploring Standard Format For Fund Networks

By TOM FERRIS

NEW YORK — In a potentially significant move for the nation's payment mechanism, the Federal Reserve System is exploring whether it should implement a standard format for transactions over both its Fed Wire funds-transfer system and the automated clearing house network, an agency official said.

Operations/Technology

Such a move would cut down on "confusion" caused by the number of different formats now used on both

Wire Transfers: Page 12 ➼

Are Off-Site ATMs Worth the Effort?

Some Experts Question Value of More Machines in Supermarkets

NEW YORK — Banks have been placing growing numbers of automated teller machines in locations away from bank offices — supermarkets, convenience stores, and gas stations, for example — and more of these installations are planned.

ATMs

But some industry experts question the value of additional off-site or off-premises machines, as they are known.

The *American Banker* today ranks the commercial banks with the most ATMs and the most off-premises teller machines on page 39. A table showing the number of teller machines and number of off-site machines for the 300 biggest commercial banks in the country appears on the same page.

Banks began using teller machines around 1970, and they initially installed them mainly in their own branches. But now more than half of new ATM sites under consideration by banks are off bank premises, said Richard N. Speer, president of Speer & Associates Inc., an Atlanta-based consulting firm specializing in electronic banking.

Shared Networks Boost Popularity of Off-Site Teller Machines

Continued from Page 1

ATMs in their branches and are looking for ways to make banking more convenient for their customers. The development of shared teller machine networks has also boosted the popularity of off-site machines.

A shared teller machine network allows customers of one institution to use the ATMs of another institution.

Off-site machines become more practical when a majority of consumers in a given area can use them rather than only customers of a single institution.

There are now about 14,700 off-premises teller machines in the United States, up from some 14,000 last year, according to *Bank Network News*, an industry newsletter in Chicago. The newsletter estimates that there are now a total of 64,000 ATMs in the country.

California First Bank in San Francisco recently teamed up with Gtel, a subsidiary of GTE Corp., to bring up about 200 ATMs in Safeway supermarkets.

"The machines are heavily populated in Los Angeles and San Francisco, and it really extends our presence significantly," said Charles Pedersen, deputy manager and senior vice president at Calfirst's operations division in San Diego. The bank has 135 branches statewide, including 48 in Los Angeles and 37 in San Francisco.

"The big selling point of supermarkets, besides the obvious convenience, is the security," Mr. Pedersen said.

Continued from Page 39

Supermarkets, along with convenience stores and gas stations, have been the most popular locations for off-site machines.

Citicorp recently acquired a struggling network of teller machines in supermarkets around New York City, and the holding company plans to expand the system significantly.

Several banks with large numbers of off-premises ATMs said the machines are a good way to provide more convenient service to customers.

"We always viewed this as a method of enhancing our distribution system for the convenience of our customers," said Raymond G. Theriault, manager of delivery systems at Mellon Bank (East) in Philadelphia. Almost half of Mellon's 300 or so ATMs are located off site, many at 7-Eleven convenience stores in southeastern Pennsylvania.

But many bankers are hard-pressed to justify the machines financially.

"It's very difficult, I think, to cost-justify an ATM, period," said Chris Farrell, vice president at Security Pacific National Bank in Los Angeles. "We look at an ATM as a means of delivering service."

This year, Security Pacific is installing only two or three off-site teller machines and is finishing installing its "first wave" of off-premises ATMs, Mr. Farrell said.

"I don't see where the payoff is," said Charles G. Raphael, vice president and head of electronic banking at National Bank of Detroit, and formerly of the bank's controller's office.

The ability to make money off these ATMs depends on the existence of a shared network and heavy usage by other banks' customers.

Every time a bank's cardholder uses another bank's ATM, the card-issuing bank must pay the ATM-owning bank a fee, usually 50 cents to 75 cents. These are called foreign or interchange transactions.

If a bank handles more interchange transactions on its own machines than its customers perform at other institutions' machines, the bank can generate a revenue stream from its teller machines.

"There are very few [banks] that have positive interchange, and there are even fewer that are making any money at it," Mr. Speer said.

But off-site machines have paid off at Connecticut Bank & Trust Co. in Hartford, which has installed about 40% of its 200 machines away from bank branches, said Mark J. Formica, executive vice president.

"The revenue stream is not strategically critical to the profitability of the bank," Mr. Formica said. "It does throw off mid-six figures in terms of the type of revenue we would be generating."

And the lure of interchange fees has prompted the First National Bank of Commerce in New Orleans to consider moving some of its ATMs from branches to off-site locations, said Del R. Tonguette, vice president at First National.

The bank will be operational early next year on Cirrus System Inc., the nationwide ATM network. And the bank hopes to generate a revenue stream from tourists and traveling business people using the bank's machines.

"Cirrus does believe that some of the ATMs we have down here are going to be some of the highest volume locations in the nation," Mr. Tonguette said.

Mr. Speer estimated that an off-premises machine is justified only if it can generate at least 8,000 monthly transactions.

But at Connecticut Bank & Trust, an off-site cash dispenser — which is cheaper to operate than a full-function ATM that takes deposits — can break even at 5,000 monthly transactions and make money at 6,000 or 7,000 transactions, Mr. Formica said.

And at Calfirst, the teller machine program in Safeway stores will break even if the cash dispensers, which do not take deposits, handle 3,000 monthly transactions, Mr. Pedersen said. "Deposit-taking adds a big expense to remote ATMs."

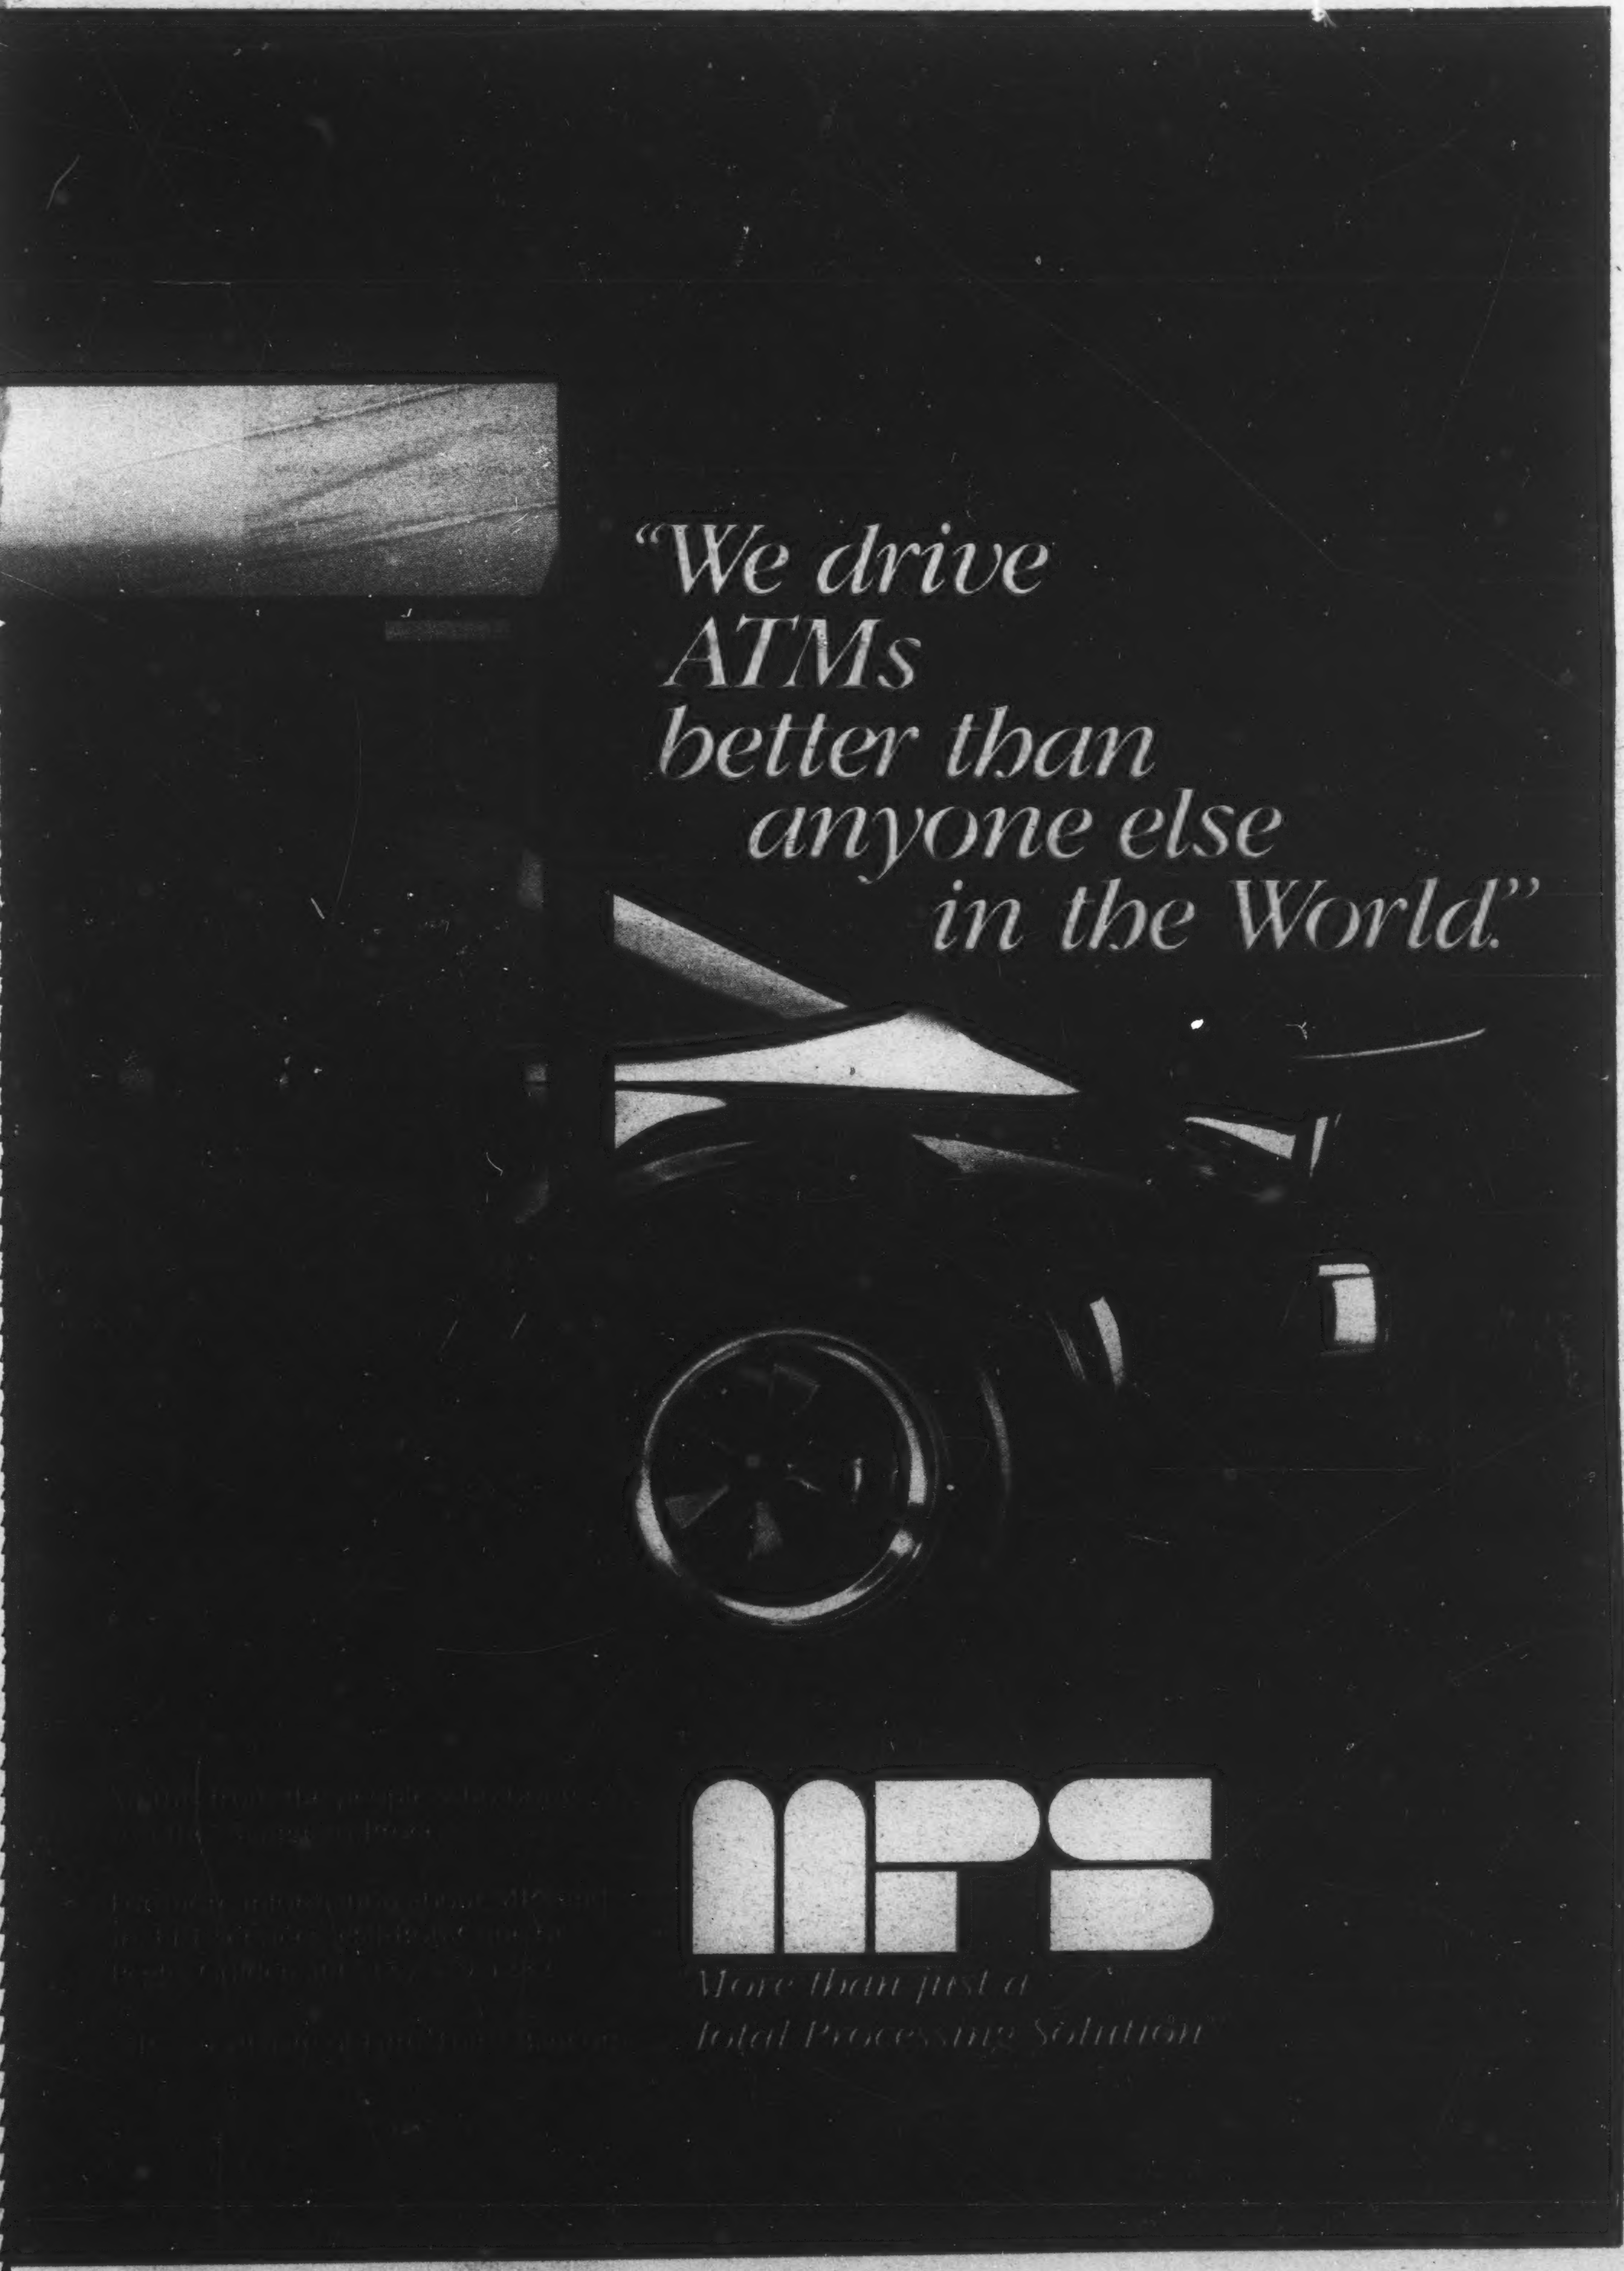
Off-premises machines in heavily trafficked locations are also a good advertising medium, some bankers said. These machines "are absolutely fantastic billboards," said Tim Ballinger, vice president at Central Trust Co. in Cincinnati, which installed its first off-site ATM in a Kroger supermarket in 1973.

Many of the good off-premises sites are already taken, Mr. Speer said. And some bankers are worried that in the long run, point-of-sale systems will threaten off-premises ATMs.

Point-of-sale systems let customers buy goods in stores with debit cards — the same cards they use in ATMs — and some merchants offer cardholders the option of getting cash back with a purchase. The amount of cash given to the customer is debited to his or her account at the time of the purchase.

Lucky Stores Inc., Dublin, Calif., is offering customers up to $200 cash back at its supermarkets as part of its participation in Interlink, the state's point-of-sale network. "Is it better to do that than use an ATM?" Mr. Pedersen asked.

— Michael Weinstein



CBS Leaves Trintex, Videotex Joint Venture With IBM and Sears

CHICAGO — IBM Corporation and Sears, Roebuck and Co. said they would become equal partners in Trintex following a decision by CBS to withdraw from the enterprise.

Trintex was formed by the three companies in February 1984 to develop and market a nationwide transaction and information network accessible through personal computers.

The action by CBS, agreed to by IBM and Sears, was said based on reassessment of CBS' priorities. It does not affect Trintex's operations or plans.

The television network's experiment in videotex began more than five years ago when it launched a venture with AT&T. Shortly after a nine-month pilot that delivered news, banking services and other informational databases to a small group of upscale New Jersey residents ended, CBS went into the partnership with IBM and Sears.

The Trintex service, one of several long-delayed videotex ventures planned by a number of major corporations, is expected to be commercially available within two years, IBM, Sears and CBS said in a news realease. Subscribers will be able to perform two-way transactions such as shopping and banking, exchange messages and access information and education services. ■

CalFed Widens Insurance Pro

Thrift's Move Comes in Wake of Industry Shakeout

By NINA EASTON

West Coast Bureau

LOS ANGELES — CalFed Inc., the nation's fifth largest nondiversified thrift holding company, has formed a syndicate on the Chicago Insurance Exchange to sell property and casualty insurance coverage in partnership with a Lloyd's of London underwriter.

The move, which will be revealed to shareholders in CalFed's third-quarter report this week, is a rare one in the thrift industry. Property and casualty insurance is a risky business, and CalFed's action comes in the wake of a massive shakeout in that industry.

"I believe the risks are controllable by the underwriting, and the returns are very good," George P. Rutland, CalFed's president and chief executive officer, said in an interview. CalFed owns California Federal Savings, the nation's fourth largest S&L.

For CalFed, which has more than $20 billion in assets, the move signals a long-awaited further reach into the insurance business. Since 1984, the thrift concern has been in the life insurance business through Beneficial Standard Life Insurance Co., which operates in 42 states.

CalFed's Chicago deal is "unusual," said Allan Bortel, a thrift analyst with Shearson Lehman Brothers Inc. in San Francisco. "But it is not inconsistent with their long-term strategy."

CalFed's entry into the insurance business, moreover, is not expected to stop at Chicago. Mr. Rutland confirmed that, since forming the Chicago syndicate, CalFed has been eyeing the London insurance market.

"Yes, we are exploring ways in which we can do more business of a similar nature, and London is a possibility," Mr. Rutland said.

Agricultural Lending

NASHVILLE — After watching their financial condition decline for most of the 1980s, farm lenders think they see the first letup in that slide. Although no one expects the problems to disappear, in the coming year for the first time they are not expected to get much worse.

"The expectation is that farm loan problems continue to be serious, but are not getting much worse," William McD. Herr, a professor of agribusiness economics at Southern Illinois University, Carbondale, Ill., said at the American Bankers Association's annual agricultural bankers conference here.

According to preliminary results of a survey of about 600 farm bankers con-

One of Biggest Bank Software Vendors Even Bigger in Service

'We are heavily involved in planning, installation, and conversions.'

Jon T. Blankmeyer
President
Software Alliance

By DAVID O. TYSON

BERKELEY, Calif. — Unlike its competitors in the market for core application systems for big banks, Software Alliance Inc. has no Wall Street analysts writing reviews about it.

The company differs from competitors in other respects, too. It gets more revenue from services than from software sales, markets only a few products of its own, and spends other people's money on development.

Analysts leave it alone because Software Alliance is a subsidiary of the privately owned Teknekron Industries Inc. and neither firm's stock trades publicly. Both are based in this university town overlooking San Francisco Bay.

Only three years old as a stand-alone entity, the company may be unknown to investors and ignored by analysts. But bankers know it: Software Alliance has systems installed at 90 bank sites and ranks second behind Hogan Systems Inc. in primary application software in banks with at least $1 billion in assets.

Jon T. Blankmeyer, the president, says Software Alliance products are operating in six of the 10 largest banks in the country.

"We are by far the leader in terms of installed full deposit systems," he said in an

First Union Dangles Carrots in Front of All Employees, Not Just Executives, to Get the Most Out of Its Team

By PETER MANTIUS

ATLANTA — When Edward E. Crutchfield Jr. was a junior officer at First Union Corp., Charlotte, N.C., the bond trading department didn't want to let him go because he was making too much money for the company.

His annual salary was $7,200 and he wasn't eligible for incentive pay. He wanted out.

Years later, after Mr. Crutchfield had risen to president of First Union National Bank, a bond trader who earned $100,000 a year made $12 million for the bank. Mr. Crutchfield called the man into his office and paid him a $600,000 bonus.

Today, First Union Corp. probably relies on incentive pay more than any other major U.S. bank holding company, said Mr. Crutchfield, now chairman and chief executive officer of the company. While most banks offer incentives to executives, Mr. Crutchfield said First Union wants to put everyone in the company on incentives.

"We're not a job-for-life company," he said. "If you go for two years without a bonus, you're probably about to be fired."

Emphasis on incentives apparently is paying off.

For the first nine months of 1986, First Union was No. 1 among big Southeast banking companies in return on equity (19.45%), return on assets (1.25%), loan chargeoffs to net loans (.19%), and allowance for loan losses to loans (1.73%).

That performance came in the midst of an 18-month merger binge that has more than tripled the Charlotte company's assets and given it big shares of the markets in Florida, Georgia, and South Carolina.

In early 1985, First Union was North Carolina's third largest banking company with assets of about $7 billion. If all pending acquisitions were complete, the company now would have assets of $25 billion.

We're not a job-for-life company. If you go for two years without a bonus, you're probably about to be fired.

— Edward E. Crutchfield Jr.
Chairman, Chief Executive Officer
First Union Corp.

Its main acquisitions have been the Northwestern Financial Corp., Greensboro, N.C., $3 billion in assets; Atlantic Bancorp., Jacksonville, Fla., $4.6 billion in assets; First Bankers Corporation of Florida, Pompano Beach, $1.3 billion in assets; Southern Bancorp., Greenville, S.C.; $1.1 billion in assets; and First Railroad & Banking Company of Georgia, Augusta, $3.8 billion in assets.

Immediately after closing the First Railroad deal earlier this month, First Union renamed the company First Union Corporation of Georgia and shifted its headquarters from Augusta to Atlanta.

To oversee the far-flung parent company, Mr. Crutchfield relies on a six-man management committee with four representatives from North Carolina and one each from Florida and Georgia.

Mr. Crutchfield said he expected the pace of merger activity in the Southeast to slow down now because the stock prices of the potential acquirers are about 20% below their 1986 highs.

But he said unrestricted interstate banking is probably only three to five years away. When it comes, he said, there may be mergers between regions "on a scale that could rival the big oil mergers."

Although big southeastern banks have been rumored to be considering buying struggling Texas banks, Mr. Crutchfield said First Union couldn't legally complete such a deal.

Texas law permits acquisitions by banks from anywhere in the country. However, under laws in North Carolina, South Carolina, Georgia, and Florida, banks that have taken advantage of that region's reciprocal laws are prohibited from expanding outside the region, according to some legal experts. Before any southeastern bank could buy a Texas bank, laws would have to be amended in each state in which a potential southeastern acquirer operates.

In an interview after a speech to the Southern Business Administration Association in Atlanta, Mr. Crutchfield said he wasn't actively trying to get the southeastern laws amended, but he said he wouldn't be surprised to see the changes made early next year.

Mr. Crutchfield said that while southeastern interstate banking laws were designed to protect the region's banks from potential acquirers in New York, California, and Texas, "we may have built the walls so high we can't get out."

He said First Union is considering moves into the insurance and consumer finance industries and said it had considered, then rejected, the idea of bidding for Charles Schwab & Co., BankAmerica Corp.'s discount brokerage subsidiary.

Meanwhile, the company is trying to get its group of products out to its newly acquired subsidiaries. The Georgia company will beef up its leasing and discount brokerage business and a television advertisement used in Florida will soon begin airing in Georgia. ■

Stock Thrifts Turn to Compensation Plans to Keep Managers

By JEFFREY MARSHALL

Publicly held thrifts are turning to increasingly sophisticated compensation strategies — including incentive plans — to reward and retain key managers, says a California-based management consulting group that has published a new survey of compensation at stock-issuing thrifts.

Stock options are among the incentive methods that public companies of all kinds have turned to in recent years, but mutually owned associations have no recourse to such strategies.

"It's fair to say that stock companies have options open to them that mutual companies do not," said Jon Rosenbaum, an associate at MCS Associates and the author of the survey.

MCS, based in Newport Beach, Calif., has a number of major thrift clients. It released its findings on Nov. 10 in San Francisco at the annual convention of the U.S. League of Savings Institutions.

In the survey, which MCS says is the first of its kind, composite compensation strategies and figures were compiled for 160 publicly held thrifts. Mr. Rosenbaum said that there may be as many as 220 such thrifts, but that some companies are traded only regionally or "simply don't show up in the literature."

Data for the survey covers the years 1984 and 1985 and was obtained from proxy statements.

The U.S. League publishes a comprehensive study of industry compensation practices but does not separate out publicly traded thrifts. Mr. Rosenbaum said MCS hopes to update this new survey each year.

Chief executives were the biggest beneficiaries of their companies' largesse, the study found. Their cash compensation rose an average of 14% in 1985 over the previous year. Lesser executives fared less well, with the second highest paid executives at the largest thrifts surveyed — those with $2.5 billion or more in assets — actually getting 1% less, on average, than in 1985.

Cash Compensation of Highest Paid Thrift Executives

Number of thrifts	6		28		44		42		40	

Source: MCS Associates.

Total 1985 cash compensation for the highest paid executive in each size category ranged from $142,106 in the group with less than $200 million in assets to $3.96 million in the group with more than $2.5 billion. Eight percent of the institutions paid their top executive $500,000 or more last year, and 35% paid the top person $250,000 or more.

While 95% of thrifts are using incentive compensation, an increasing number are using a combination of annual and long-term plans. That growth was most evident at the largest thrifts, where 72.5% are using some kind of combination; in contrast, only 46.4% of thrifts with between $200 million and $499 million in assets used such a combination.

The largest thrifts also were most likely to tie incentive payments to specific performance and strategic goals, while the smallest group was most likely to make awards that were not linked to any concrete criteria, MCS found.

This latter type of plan, identified in the survey as a discretionary plan, proved surprisingly popular at thrifts with between $1 billion and $2.5 billion, however. Nineteen percent of these thrifts used that form, more than any other type of plan.

Mr. Rosenbaum said he had no ready explanation for this anomaly, adding that "it's a bit unusual in terms of the trends."

While three-fourths of the thrifts in the survey paid cash for annual awards, only 10% — 19% more than in 1984 — were using a combination of cash and elective deferral of cash payments.

In other findings:

- Stock options plans are the most popular form of long-term incentive plan, with 88.8% of all companies using some form of stock options in 1985. At the largest thrifts, the figure was 97.5%.
- Use of stock appreciation rights in conjunction with stock options is becoming increasingly popular. Use of such plans rose to 45.6% of all thrifts in the survey last year, up 17.6% from 1984.
- Reflecting the merger mania sweeping the nation, an increasing number of thrift executives are being given employment contracts with takeover clauses. The percentage of thrifts offering such arrangements to several top executives rose from 26.4% in 1984 to 43.1% last year. For chief executives, the increase was 11.1%, up to 48.8%.
- More and more executives are opting for cash payments instead of deferred stock options. That phenomenon, a result of the 1986 tax-reform law, runs counter to the trend in recent years to defer income, Mr. Rosenbaum said. ■

Strategic Dates

July 1, 1987

MARYLAND LEGISLATION: Effective today, bank holding companies from Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, Pennsylvania, South Carolina, and Tennessee will be permitted to acquire Maryland banks on a reciprocal basis.

Bank Card Ads Draw Fire from Lobby Group

Citicorp, Sears Criticized For 'Deceptive' Practices

By MARK SULLIVAN
States News Service

WASHINGTON — A consumer association on Thursday charged that U.S. banks are attracting new credit card customers through "misleading and deceptive advertising."

"The banks have been filling American consumers' mailboxes with false claims and phony offers and lining their own pockets through deliberate consumer confusion," said Elwood Holstein, director of the Bankcard Holders of America.

MasterCard Questions Visa Deal
Page 3

The group recently completed a review of credit card ads from newspapers, magazines, direct-mail solicitations, and "take-one" displays. Mr. Holstein singled out the ads of six major issuers of bank credit cards as examples of what he called misleading, though legal, marketing practices. The issuers cited are Bank One, Columbus NA in Ohio; Sovran Bank, Richmond, Va.; Bank of America, San Francisco; Citibank, New York; Sears Financial Network; and First Deposit National Bank, Tilton, N.H. All six financial institutions were guilty, according to Mr. Holstein, of any or all of the following practices:

- Not providing information on the important financial terms of the credit card in the advertisements.
- Using misleading payment gimmicks to camouflage the true cost of credit to the consumer.
- Offering nonfinancial membership

Approval of Sumitomo's Stake In Goldman Intrigues Industry

By ROBERT TRIGAUX
Washington Bureau

News Analysis

WASHINGTON — The Federal Reserve Board's approval of a Japanese bank's planned stake in a U.S. investment bank has the financial industry buzzing about policy implications for separation of banking and commerce under the Glass-Steagall Act.

But, as a practical matter, U.S. bank holding companies see little reason to pursue similar investments in securities firms and are actively chasing other opportunities in the investment banking arena, according to observers. Disinterest among U.S. banks stems mainly from restrictions to insure that the Japanese bank does not assert control over the securities firm.

Nevertheless, the proposed investment of Sumitomo Bank Ltd. in Goldman, Sachs & Co., New York, represents the first major stake by a giant foreign banking organization in a major U.S. securities firm. "I think it is very significant," said John Hawke, a former Federal Reserve general counsel and a partner with Arnold & Porter. "It reflects the tensions that must exist in the invest-

FDIC Will Turn to Public Accountants In Effort to Examine Banks More Often

By JAY ROSENSTEIN
and ROBERT GARSSON
Washington Bureau

William Seidman

WASHINGTON — Faced with a need to increase the frequency of bank examinations, Federal Deposit Insurance Corp. Chairman L. William Seidman on Thursday unveiled plans to supplement the agency's examiner force with help from public accountants.

Mr. Seidman disclosed plans to start a pilot program next summer in which auditors would work alongside FDIC examiners on some bank examinations.

The FDIC chairman unveiled the program in a speech to the national banking conference of the American Institute of Certified Public Accountants.

Comptroller of the Currency Robert Clarke told the accountants' group that his agency also is considering expanding the use of accounting firms in carrying out supervisory duties, and might require that national banks get outside audits. Many new national banks, and national banks that are part of publicly traded holding companies, already are required to have outside audits, but other national banks escape that additional layer of scrutiny.

Mr. Seidman, an accountant by training, said financial troubles at banks, along with fraud and other abuses by bank officials, have made it necessary to increase the frequency of on-site

This listing is based on permanent real estate mortgages serviced for investors. Mortgages owned by an institution, as well as foward commitments, home improvement loans, and all temporary financing such as construction loans and development loans are excluded. **(a)**— Formerly Manufacturers Hanover Mortgage Corp. Fireman's Fund Corp., Novato, Calif. acquired the company from Manufacturers Hanover Corp., New York, and changed its name effective June 30, 1986. **(b)**— Formerly Commonwealth Mortgage Corp. Changed title in the first half of 1986 and now includes Commonwealth Western Mortgage Corp., Portland, Ore. (formerly General Electric Mortgage Corp.) in its figures. **(c)**— Formerly Allstate Enterprises Mortgage Corp. Changed title on May 1, 1986. **(d)**— Acquired by CityFed Financial Corp., Bedminister, N.J. from PNC Financial Corp., Pittsburgh, on June 1. **(e)**—Purchased Rotan Mosle Mortgage Co., Houston, in April 1985. Rotan Mosle was servicing $258 million for investors on 6/30/85, to rank 261st among the top 300 firms on that date. **(f)**— In process of being acquired by Glendale Federal Savings & Loan Association, Calif. from Merrill Lynch & Co., Inc., New York. **(g)**—Formerly North Central Financial Corp. Changed name on June 1, 1986. **(r)**— Based on data received after publication last year. This is the rank the company would have had if data were available. **(†)**— Servicing volume for 6/30/85 is for the top 100 firms on 6/30/86. **N.A.**— Not Available.

Top 300 Mortgage Companies

Based on Volume of Permanent Mortgages Serviced on June 30, 1986

Top Firms in Mortgage Industry Taking Bigger Share Of the Servicing Business, Despite More Players

By L. MICHAEL CACACE

NEW YORK — The top firms in the mortgage industry are significantly increasing their share of the mortgage servicing market. This concentration of servicing at the top firms signals a fundamental change in the industry.

In today's annual survey of the top 300 mortgage companies in mortgages serviced for investors, the *American Banker* finds that the top 300 firms are servicing more than 93% of the industry's portfolio. Just five years ago, the figure was 89%. Nineteen years ago — when the *American Banker* first began keeping track of servicing — the top firms were servicing 79% of the industry portfolio.

While servicing has become more concentrated, the total number of mortgage companies is on the rise. According to the Mortgage Bankers Association, Washington, D.C., on June 30, 1986, there were 1,357 mortgage companies that were members of that association. Just five years earlier, there were 786 mortgage company members in the association.

According to Lawrence J. Trautman, a senior vice president and director of mortgage industry practice at Donaldson, Lufkin & Jenrette Inc., New York: "We are seeing the development of a two-tier industry — those firms engaged principally in the loan origination business, and those strategically seeking to become major factors in loan servicing by achieving certain economies of scale available to the largest of servicers."

The mortgage company business is actually two businesses — loan origination and servicing. A mortgage company originates first mortgages with its own or borrowed funds and then sells these loans to investors. The servicing business is generally more lucrative. For a fee, the mortgage company will continue to service the mortgages it sold to investors.

Servicing includes the collection of payments in accordance with the terms of the loan and the operational procedures covering accounting, bookkeeping, insurance, tax records, loan payment follow-up, delinquency loan follow-up, and loan analysis.

Over the past two years, the originations portion of the business has boomed, sparked by lower interest rates. "Mom and pop" mortgage companies have developed, specializing in originations. These small companies are selling their portfolios to the larger companies for servicing.

According to Mr. Trautman, the recent spate of refinancings of higher interest mortgages for lower interest mortgages over the last year has caused "a transfer of wealth from major portfolio services to the 'cottage industry' originators."

"Many aggressive purchasers of loan servicing during the past several years have found that their portfolios are 'running off' at levels never imagined in their wildest dreams, with the handsomely priced asset they've paid for simply disappearing as the borrower refinances with an originator possessing a superior point-of-sale capability," Mr. Trautman says.

The top 300 mortgage companies were servicing $549.8 billion for investors on June 30, 1986, up 16.3% from the year before. According to data from the Mortgage Bankers Association, its 1,357 mortgage company members were servicing $590.3 billion in mortgages for investors at midyear.

GMAC Mortgage Co., Philadelphia, maintained its ranking as the top mortgage company in the field with $21.8 billion in mortgages serviced for investors on June 30, up 4.7% from its industry leading volume of $20.4 billion on Dec. 31, 1985, and up 12.6% from $19.3 billion on June 30, 1985, when it ranked second.

Concentration in the Mortgage Industry

June 30, 1967	$48.6	$61.7	NA	78.8%
June 30, 1972	83.0	96.6	NA	85.9%
June 30, 1977	134.8	153.0	735	88.1%
June 30, 1981	252.4	282.6	786	89.3%
June 30, 1986	549.8	590.3	1,357	93.1%

* — Data from Mortgage Bankers Association, Washington, D.C.

The three largest percentage gains in servicing and the three largest percentage losses in servicing over the year ending June 30, 1986, were posted by commercial-bank-related firms.

The top three gainers were: Boatmen's Mortgage Corp., St. Louis; Independence One Mortgage Corp., Southfield, Mich.; and MPact Mortgage Bankers, Dallas.

Boatmen's Mortgage Corp. — formerly known as Missouri Mortgage & Investment Co. — is a subsidiary of Boatmen's Bancshares Inc., St. Louis. Boatmen's Mortgage, which ranked 289th among the top 300 firms, had a 1,841% gain in its servicing to $204.0 million on June 30, 1986, from $10.5 million on June 30, 1985. The mortgage company did not respond to several requests from the *American Banker* to explain the reasons for this gain.

Independence One Mortgage Corp., a subsidiary of Michigan National Corp., Bloomfield Hills, had a 213% gain in its servicing to $1.9 billion at midyear 1986, up from $614.2 million a year earlier. The company, which ranked 78th among the top 300 firms, attributes the gain to the consolidation of an affiliate bank's servicing into its portfolio.

MPact Mortgage Bankers, Dallas, had a 178% gain in its servicing volume to move up 83 places in rank to 189th, with $597.9 million in servicing on June 30. MPact Mortgage, a subsidiary of MCorp, attributed about half of the gain to an expansion of its correspondent operations into the Southeast and the other half to the surge in loan production brought about by lower interest rates.

Last week, Lomas & Nettleton Financial Corp., Dallas, the nation's second largest mortgage company, with $21.3 billion in servicing at midyear, announced that it will acquire MPact Mortgage Bankers' entire servicing portfolio before yearend.

The three largest declines in servicing were posted by Latimer & Buck Inc., Philadelphia; Security Pacific Mortgage Corp., Denver; and Intercounty Mortgagee Corp., Hempstead, N.Y.

Latimer & Buck, a subsidiary of Fidelcor Inc., Rosemont, Pa., had a 48% decline in servicing to $1.1 billion on June 30, 1986, from $2.2 billion a year earlier, to drop 65 places in rank to 127th. The decline was attributable to the sale of its residential mortgage portfolio to a sister mortgage company, Fidelity Bond & Mortgage Co., Philadelphia.

Fidelity Bond & Mortgage had a 40% gain in its servicing portfolio to move up 17 places in rank to 101st, with $1.51 billion in servicing at midyear 1986, compared with $1.08 billion a year earlier. On Oct. 1, Fidelcor sold Fidelity Bond & Mortgage to Raritan Valley Savings and Loan Association, East Brunswick, N.J., for $22.5 million.

The nation's 57th largest mortgage company, Security Pacific Mortgage Corp., Denver, a subsidiary of Security Pacific Corp., Los Angeles, had the second largest decline in servicing. Its servicing portfolio fell 39% to $2.47 billion on June 30, from $4.07 billion a year earlier. The company is in the process of leaving the servicing business.

In September, Fleet Financial Corp., Providence, R.I. — the nation's fifth largest mortgage servicer, based on the combined servicing portfolio of $13.8 billion at Fleet National Bank and its two mortgage company subsidiaries — announced that it had agreed to purchase Security Pacific Mortgage.

The *American Banker* survey is based on permanent real estate mortgages serviced for investors. Mortgages owned by an institution, as well as forward commitments, home improvement loans, and all temporary financing, such as construction loans and development loans, are excluded. The listing includes servicing performed by independent mortgage companies; mortgage companies that are subsidiaries of other firms, including banks, bank holding companies, and thrift institutions; and holding companies whose major holdings are in mortgage companies. ■

American Banker's Mortgage Firm Report Available on Diskette

The data presented in today's report on the top 300 mortgage companies are available on a computer diskette for $100 (New York residents add sales tax).

The diskette uses formats suitable for most personal computer users and allows for easy manipulation and analysis.

To order your diskette write Banking Data Service, American Banker, One State Street Plaza, New York, N.Y. 10004. Oustide of New York, phone orders maybe placed toll-free by calling Debra Crocco at 800-322-0047. New York State residents may call 212-943-8276.

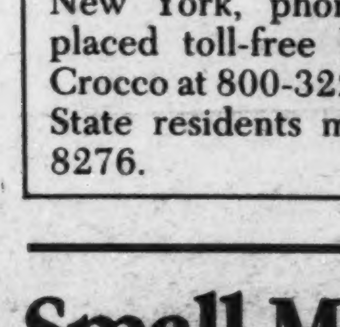
Small Mortgage Lenders Will Soon Be Swimming with the Big Fish

Little Firms May See Larger Profits After Fannie Mae Pools Their Mortgages for Institutional Investors

By JIM McTAGUE

Washington Bureau

WASHINGTON — Beginning Jan. 1, small-fry mortgage lenders will be able to plunge into the previously inaccessible waters of the big pools, an event made possible by a marketing stroke of the Federal National Mortgage Association, or Fannie Mae.



Fannie Mae predicts small lenders will realize bigger profits by allowing the agency to batch their mortgage loans into one big package or "pool" for sale to institutional investors.

The lenders will receive a pro-rata piece of the sale proceeds.

"The institutional investors want big pools, and they are paying premiums for them," contends Dick Daniels, a senior vice president at Fannie Mae.

Explained another Fannie Mae official, "A big $100 million pool is easier work for an institutional investor's bookkeepers to handle than, say, 10 smaller pools of $1 million each, and that's one reason they are in demand."

The new program will permit lenders with packages of mortgages in amounts as low as $250,000 to wade into markets previously dominated by only the largest mortgage-banking firms. Initially, only 30-year conventional mortgages not more than 12 months old will be eligiable.

The batched mortgage pools eventually could approach the $1 billion mark if demand for mortgages remains strong, said Mr. Daniels.

Most mortgage pools now offered for sale are in the $1 million range.

Fannie Mae expects to see some increase in market share due to the new product because competitor Freddie Mac, the Federal Home Loan Mortgage Corp., has nothing like it.

The new product has tax implications that Mr. Daniels said all lenders should be aware of before they jump in for a swim. Lenders who deliver mortgages to the pool and get back securities representing their share have to account for the transaction as a sale of assets, he said. This means that the securities could not be used for swaps or as collateral for repurchase agreements, he said.

Information on pool numbers and coupon rates is available by phone or on Telerate, Mr. Daniels said. ■

Random Thoughts

By SANFORD ROSE

The use of duration analysis to assess interest rate risk is becoming increasingly widespread at banks and thrifts. A palatable way to explain duration to senior management is to avoid the direct use of the word and substitute instead the phrase interest-rate elasticity — defined as the percentage change in the value of assets and liabilities for a 100 basis-point change in interest rates. Elasticities are determined by dividing the negative of durations by one plus the discount rate.

For example, assume that a bank has invested $1,000 in a three-year 10% coupon bond. Assume further that one-year rates stand at 9%, two-year rates at 10%, and three-year rates at 12%.

The duration of the bond is determined by first multiplying the present value factors derived from the three rates by the cash flows — for the sake of simplicity, assume three annual flows of $100, $100, and $1,100.

Then these present values are further multiplied by the respective times to receipt — one, two, and three years. The duration is the ratio

Fed's Real Estate Investment Proposal Would Curb State Banks, Groups Say

By JIM McTAGUE

Washington Bureau

WASHINGTON — The Federal Reserve Board's proposals for admitting bank holding companies into the real estate game through nonbank subsidiaries would radically curtail the activities of state-chartered banks in such states as California and Ohio, according to trade groups.

The Fed on Monday proposed limiting a bank holding company's total investment in all real estate subsidiaries to 5% of its consolidated primary capital. In states such as California, where the Legislature has given local institutions broad powers, state-chartered institutions can invest up to 10% of their total assets in real estate, a figure about 20 times larger than what the Fed would allow, said industry sources.

However, for holding companies in about 31 other states, the guidelines could be beneficial. If adopted, they would permit bank companies to enter the real estate game as direct investors for the first time. The proposal does not cover banks that are not owned by holding companies.

The board voted Monday to solicit public comment on the new regulations. It is an about-face for the Fed, which since 1972 has said that direct real estate investment was not closely related enough to banking to be considered a permissible activity. But the board said changes in state laws permitting such activities by their locally chartered institutions, as well as a proposal by the Federal Deposit Insurance Corp. to allow direct investments, led it to reevaluate its stand.

Among the issues the Fed's Board of

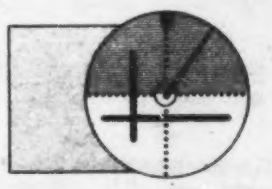
Security Pacific Buys a Toehold In Washington

Adds Bank Near Olympia To Its Western Stable

By NINA EASTON

West Coast Bureau

LOS ANGELES — Security Pacific Corp., the nation's sixth largest bank holding company, has made its first move into Washington State with the acquisition of Harbor Security Bank, a $10 million-asset bank located southwest of Olympia.



Corporate Strategy

The acquisition, announced Monday, is the latest in a series of interstate moves that so far has given Los Angeles-based Security Pacific a presence in Arizona and a potential presence in two other states — Nevada and Oregon.

With the advent of interstate banking in California, Security Pacific is moving away from its earlier emphasis on expanding its operations through nonbank vehicles, particularly in the securities business, and is focusing on small and medium-sized bank acquisitions.

Security Pacific vice chairman Robert H. Smith said in an interview Monday that the banking concern expects to add about $10 billion in assets — expanding its banking activities in northern California, where it has an estimated 4% market share, and in neighboring states — over the next three to four years.

"Our goal is a $100 million total earnings stream" from those acquisitions over the same time period, said Mr. Smith, who also serves as chief operating officer of Security Pacific National Bank, the holding company's principal subsidiary. Security Pacific

Barclays Cites Student Pressure In Decision to Exit South Africa

By JOHN J. DUFFY
London Bureau

LONDON — Barclays Bank PLC said Monday it has sold its remaining interest in its associate bank in South Africa and is pulling out of the country.

SOUTH AFRICA

Barclays, one of Britain's top four clearing banks, said it sold its remaining 40.4% in Barclays National Bank Ltd., the biggest commercial bank in South Africa, to a group of South African institutions including the Anglo American Corp., De Beers Consolidated Mines, and the Southern Life Association. Both Anglo American and De Beers are controlled by South African industrialist Harry Oppenheimer.

Barclays' withdrawal is the largest divestment from South Africa yet by a foreign company.

Sir Timothy Bevan, Barclays' chairman, said the decision to sell the stake was made primarily because of the uncertain outlook for the South African economy and because of the bank's plans to devote fewer resources to former British colonial outposts, such as South Africa, and more to major modern banking markets, such as North America.

Visa's Hire of First Interstate's Johnson Stirs Speculation on Russell's Successor

Bank's Former Credit Card Chief to Be 'Assistant to the President'

By JEFFREY KUTLER

SAN FRANCISCO — Moving to strengthen its top management and hasten its search for a future president, Visa U.S.A. Inc. has named A. Wayne Johnson as one of three executive vice presidents.

Credit Cards

Mr. Johnson, 34, is the former chief executive officer of First Interstate Bancorp's credit card subsidiary.

He was given the added title of "assistant to the president," who is Charles T. Russell, and will take on corporate planning responsibility for the bank-owned payment services organization when he arrives after Dec. 1.

Mr. Johnson is the first outsider in years to be added to Visa's senior staff. This will likely fuel speculation about a possible successor to Mr. Russell, who is 56.

Mr. Russell said he was looking for "more depth in senior management," which was thinned by the departure of several executives since 1984 when Mr. Russell took over from Dee W. Hock as Visa's top officer.

Mr. Russell and Mr. Hock, the only chief executives in Visa's 17-year history, had maintained a tradition of promoting senior staff from within.

Mr. Johnson, who has been a management consultant as well as bank card manager at First Interstate, brings "a unique perspective [that] will add an important dimension to the management team," Mr. Russell said.

Mr. Russell, who is president of both

INTERNATIONAL BRIEFING

Compensation Isn't Only Reason For Executive Flight at Citicorp

LONDON — The turmoil that has prompted a string of senior defections from Citicorp Investment Bank Ltd. has as much to do with structural changes taking place within the organization as with the issue of compensation, Citicorp executives said.

UNITED KINGDOM

The changes, which have been under way "for a number of months," according to one Citicorp executive, include a merging of the treasury and merchant banking divisions within Citicorp Investment Bank. The merger is taking place in the context of a gradual integration between the institutional bank, which does traditional wholesale corporate banking business, and the investment bank, which largely operates in the capital markets. This process has been under way for more than a year, since Citicorp first transferred the treasury division from the commercial bank to the investment bank. The merger between treasury and merchant banking are reportedly resulting in redundancies and in a rise in disaffection among senior personnel.

"It's a time of enormous change within the corporation and everything is in a bit of a flux right now," one Citicorp executive said on Friday.

The issue of compensation is significant in some cases but not in all, sources said. It has been most significant among securities traders in New York and London, where rival investment banks have traditionally paid considerably more than Citicorp.

The latest defections to hit Citicorp were the resignations last week of Mark D. Blundell, 36, the investment bank's executive director of interest rate risk management in London, and David P. Pritchard, 42, managing director of international securities. Mr. Blundell is joining Natwest Investment Bank Ltd., where he will serve as a director with responsibility for structuring and marketing interest rate swaps and other risk management techniques. Mr. Pritchard has been appointed vice chairman of Orion Royal Bank Ltd. and will be responsible for running the firm's capital markets business.

Both Mr. Blundell and Mr. Pritchard had been with Citicorp for nine years.

In addition to the executives who left last week, other recent Citicorp refugees include John C. Botts, who resigned as chairman of Citicorp Investment Bank Ltd., and Hans W. Ritz, managing director of Citibank AG in Frankfurt. Mr. Botts is starting his own joint venture in London, and Mr. Ritz left to join a German investment bank.

In an interview Friday, Mr. Blundell said that his decision to leave Citicorp for Natwest was based mostly on his desire to remain in London. "I wanted a job where I didn't have to worry about being pulled out of here in five or 10 years," he said. "I wouldn't mind puttering to the office when I'm 60 years old and I'm only 36 now," he said. Compensation was not an issue, he said, as salary levels at Citicorp and Natwest are roughly equivalent. "If money was the issue I'd go to work for Salomon Brothers," he said.

— John J. Duffy

ISRAELI GOVERNMENT MAY OWN BANKS: The Israeli government may wind up the unwilling owner of the nation's banks when bank shares it holds fall due for redemption in two years, a senior Israeli economic analyst predicted.

"In a country dedicated to the capitalist system, I'm not sure that is something that is desirable," Marshall Sarnat, professor of finance at the Hebrew University in Jerusalem, said at a panel discussion in New York on prospects for reforming financial markets in Israel.

Shares in Israel's major banks were converted, for all practical purposes, into government bonds in a bailout after a speculative bubble on the Tel Aviv Stock Exchange burst in October 1983. The conversion increased Israel's internal debt by some $7 billion. Internal public debt in Israel is estimated at $43 billion and its foreign debt at around $20 billion.

A recent government decision to reduce new issues of government paper by $300 million, according to Uriel Procaccia, Hebrew University professor of corporate and financial law, is meaningless without a corresponding reduction in budget spending.

Both speakers sharply criticized distortions in the local capital market created by government intervention.

Treasury borrowing in the bond markets and its hold on setting the terms for interest rates, duration, and types of linkage effectively precludes any competition for funds, said Mr. Sarnat.

He said this led to the stock manipulation by banks that triggered the 1983 collapse in share values.

Government intervention and the small size of the domestic market, he added, has prevented specialized securities brokerage houses from developing and has left banks as the country's principal underwriters, investment advisers, brokers, and managers of mutual funds and retirement funds.

"Banks must step back from their stranglehold on the equity market," said Mr. Sarnat, who called on the government to implement recommendations to reduce Israeli commercial banks' control over the primary and secondary securities market and permit the entry of other institutional participants.

Bank Board Changes Reimbursement Policy After Disclosure of Sizable Charges to Industry

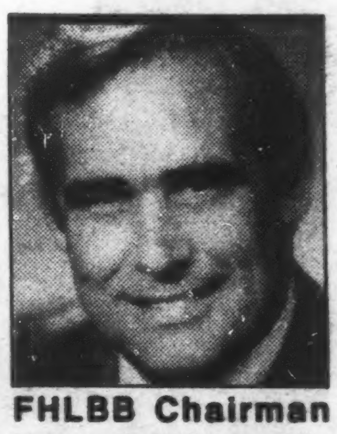
By RICHARD RINGER and ROBERT M. GARSSON

WASHINGTON — The Federal Home Loan Bank Board has ended a controversial practice under which Edwin J. Gray, its chairman, and other senior staff members routinely billed travel expenses to a special account funded by the financially distressed thrift industry.

The termination of the reimbursement practices comes just days after the Bank Board released copies of expense vouchers for the senior board members in response to Freedom of Information Act requests by news organizations, including the *American Banker*.

"There is no question that the bank system has traditionally lived very well," said Bank Board Chief of Staff Shannon A. Fairbanks, in a comment about the reimbursement practices.

"There is no question that the level of expenditures for the [district] banks and the board is an absolutely legitimate area of review," she added. "And there is no question whatsoever that will be reviewed."



FHLBB Chairman Edward J. Gray calls for end to agency travel subsidized by thrift industry.

The documents released also showed that Mr. Gray spent more weekdays traveling than he spent working in his Washington office from the time he took office in spring of 1983 through June of this year.

The nation's savings and loans, through their ownership in the 12 regional Federal Home Loan banks, had paid for much of Mr. Gray's extensive travel expenses, including limousine services, expensive hotel rooms, and chartered yachts. That practice has now been terminated.

This tax on the thrifts came at a time when many of the

Third World Debt Securities Urged

NEW YORK — A leading investment banker has urged the securitization of at least some bank loans to troubled developing nations as a means of easing the Third World debt crisis while providing much needed liquidity to the global financial system.

In addition, Henry Kaufman, managing director of Salomon Brothers Inc., called for the establishment of a new official international agency "with the power to, among other things, set uniform accounting, capital and reporting standards for major financial institutions."

He offered the proposals here Thursday at the U.S. congressional summit on debt and trade, the latest in a series of conferences that gather together political, business, and financial leaders to focus on the problems facing the economies of this country and the world.

Also speaking at the meeting was Treasury Secretary James A. Baker 3d,

Third World Debt: Page 14 ➛

Sales and Swaps of Third World Debt Earn Brokers' Fees for Major Banks

By GORDON MATTHEWS

NEW YORK — Major banks are increasingly active in sales and swaps of below-grade debt of developing countries — but mostly as brokers in search of fees rather than as principals seeking to shrink their own large loan portfolios to the Third World.

AN American Banker SPECIAL REPORT

The market this year for such loan transactions is expected to reach about $5 billion, although some participants decline to guess its size. Many deals are held confidential by the banks that are sellers or swappers — mostly medium-sized and regional banks that have posted some reserves against such debt.

The transactions represent a small portion of the nearly $400 billion owed foreign creditors by developing nations and are not seen as a final answer to the international debt crisis. But with no real solution in sight, they are viewed as one of the few innovative moves that can help both banks and their borrowers.

The discounts from face value on the loans involved in such deals vary from 25% or less for Brazil and Venezuela to 45% for Mexico to 80% for Peru. They are also quickly changeable, depending on economic and political developments.

Nearly every money center bank now has a department that is seeking such business. Manufacturers Hanover Trust Co., for example, formed its asset redeployment group last June with a small staff of its own that draws on much help from other areas of the bank.

The leaders among banks as debt brokers are Citibank, Chase Manhattan Bank, Bankers Trust Co., and Libra

savings and loans have serious financial problems that threaten their solvency, and when the thrifts are forced to pay increased assessments to shore up the dwindling Federal Savings and Loan Insurance Corp.

"It's a matter of concern to me personally" that the Bank Board members were spending so much on travel at a time the industry is in such trouble, said Ms. Fairbanks.

Under the new policy, Bank Board employees will be reimbursed by the board only for amounts permitted for other government employees. No employee can be reimbursed by any of the district banks — individually or through the special "shared expense fund" — by trade groups, or by organizations such as the Federal Home Loan Mortgage Corp., known as Freddie Mac.

In an interview on Thursday, Ms. Fairbanks declined to criticize any of the district bank presidents who authorized and approved the expenses. But she said that neither she nor the Bank Board members in Washington were aware of how much was being spent, and that they were surprised when they saw the amounts.

"You walk into the hotel, and your room has already been paid for. You go to dinner, and someone has arranged for a room. You don't know what the charges are in dollars and cents."

The documents released under the Freedom of Information Act show that Mr. Gray spent approximately 433 weekdays on the road, and 397 full days in his office between March 23, 1983 — when he received Senate confirmation — and June 23, 1986. That estimate does not include weekends, holidays, and unrecorded vacations that Mr. Gray may have taken.

Mr. Gray's travel includes business trips throughout the country. The travel also includes many visits to his California home — often tied to his business travel — as well as trips to London, Dublin, Australia, and Rio de Janeiro. Between August 1985 and June of this year, Mr. Gray made 16 visits to his home state of California.

The documents show that Mr. Gray's traveling on government expense began even before he formally took office. He took three trips in February and March of 1983, before the Senate confirmed him on March 23 of that year.

Expenses Billed to Shared Fund by District Banks

The following shows what each Federal Home Loan Bank contributed in the past to a common or "shared" fund which paid for portions of travel and entertainment expenses for Home Loan Bank System and Federal Home Loan Bank Board senior officials.

District	Headquarters	1983	1984	1985	1986*
1	Boston	NA	$4,705	$1,869	$471
2	New York	$2,404	$16,227	$13,734	$14,389
3	Pittsburgh	$1,444	$12,289	$26	$1,144
4	Atlanta	$4,312	$7,694	$7,113	$12,996
5	Cincinnati	$16,876	$256	$11,498	$1,651
6	Indianapolis	$1,034	$4,123	$17,371	$499
7	Chicago	NA	$5,405	$10,533	$9,442
8	Des Moines	$3,074	$15,698	$16,840	$12,053
9	Dallas	$916	$8,090	$10,767	$1,283
10	Topeka	$315	$586	$1,863	$896
11	San Francisco	NA	NA	$24,721	$22,701
12	Seattle	NA	NA	$3,653	NA
	Estimated Total	**$30,375**	**$74,932**	**$122,688**	**$77,525***

Source: Federal Home Loan Bank System.
*1986 figures are for partial year only, ranging from six to nine months.

After that vote, records show that during 1983 Mr. Gray spent approximately 88 full workweek days — not counting holidays — in his Washington office, and 107 workweek days traveling.

During November 1983, and again in December 1983, Mr. Gray was in the Washington office only six days each month.

The documents show that the nation's savings and loan associations until now have subsidized some of the travel and entertainment expenses of Mr. Gray and other Bank Board officials through the thrifts' ties to the district Federal Home Loan banks. The district banks, chartered by Congress, are funded by the savings and loans that own stock in the bank. In exchange for this ownership, a savings and loan is able to borrow funds through the Bank Board system and become eligible for deposit insurance through the Federal Savings and Loan Insurance Corp.

The district banks had established an expense account fund to which charges were debited, including travel and entertainment expenses of Mr. Gray, other Bank Board members, and, in some instances, their spouses. In addition, individual district banks routinely pay the expenses of Mr. Gray, other Bank Board members, and their spouses, the documents show.

The savings and loans aren't alone in picking up the expenses racked up by Bank Board officials. The U.S. League of Savings Institutions, a major trade association representing the thrift industry, pays all expenses that exceed a $75 per diem given to Mr. Gray and other Bank Board officials attending league functions. The payment of these expenses has been a policy of the U.S. League for about 30 years, a league spokesman said this week, and the policy adheres to the Bank Board's code of conduct.

In a related development, on Thursday, the Office of Government Ethics released a report on its investigation of Mr. Gray and the use of Federal Home Loan bank funds for travel and entertainment. Citing a lack of subpoena authority to obtain certain documents, the ethics office said it referred to the Justice Department the matter of payment of travel expenses and other gratuities to members of the board by the U.S. League and other thrift trade groups.

The practice of a trade group paying the expenses of officials who regulate the group's members is not followed widely in the financial services industry. The American Bankers Association and the Independent Bankers Association of America, the two largest trade groups representing commercial bankers, do not pay the expenses of federal bank regulators attending conventions or conferences sponsored by the associations. "Our lawyers pay close attention to these types of things," said a spokesman for the Office of the Comptroller of the Currency, the primary regulator of nationally chartered banks. The agency wants to be independent and avoid even any appearance of conflict of interest, the spokesman said.

Just days prior to the release of the documents, Mr. Gray reimbursed about $24,000 in expenses charged to the district Federal Home Loan banks. The reimbursement included $13,000 to charter a private jet used by Mr. Gray to fly from Indianapolis to California to visit his father who was gravely ill at the time.

In order to repay the district banks, Mr. Gray borrowed money from his mother. Ms. Fairbanks said the reimbursement was a "phenomenal financial burden" for Mr. Gray.

Ms. Fairbanks said she plans to spend the weekend reviewing her expense vouchers to see if any should be reimbursed. She has routinely reimbursed the banks for personal expenses that were inadvertently picked up, she added.

Expenses of Home Loan Banks' Shared Fund

	1982*	1983*	1984	1985**
Budgeted	$359,554	$433,361	$1,039,094	$679,585
Funds Spent	$165,393	$79,994	$902,230	$627,248

Source: Federal Home Loan Bank System.
*Figures from Jan. 1 to Nov. 30 of year. **1985 figures through Sept. 30

Among the documents that were released are those of an account established by the 12 district Federal Home Loan banks, called a shared account. The shared account, as well as the practice of individual district banks picking up the expenses of Mr. Gray and other Bank Board officials, provides the Bank Board with operating funds that far exceed the amount appropriated by Congress. And these expense accounts clearly help the Bank Board in attempts to operate within budgetary limitations, a goal of federal agencies as part of a concerted effort to reduce the federal budget.

"We were aware that there were costs associated with the shared expense fund, but were not aware of the specific fees," Ms. Fairbanks added.

The shared fund — informally referred to by some as a slush fund — is controlled through the Federal Home Loan Bank of Chicago, one of the 12 district banks. A policy for the shared fund, adopted in July 1981, states that expenses paid by the fund "shall be limited to expenses which benefit all banks and are approved by the banks presidents."

The shared fund account was maintained by the 12 district Federal Home Loan banks and has been used to pay the business expenses incurred not only by Mr. Gray, but also by other Bank Board officials. These expenses include legitimate business costs such as hotel accommodations and meals. Moreover, the district banks have under Mr. Gray's tenure picked up an increasing amount of the supervisory and examinations costs.

The shared fund will be maintained for legitimate shared expenses of the 12 district banks, according to one board source, but will no longer be used for travel expenses.

The expenses previously charged to the shared account also include some that are likely to raise eyebrows. For example, the Federal Home Loan Bank of Dallas paid more than $3,800 in limousine fees for Mr. Gray, Ms. Fairbanks, and Bank Board directors Donald Hovde and Mary Grigsby, while they attended the U.S. League of Savings Institutions' annual convention in Dallas in November 1985.

Mrs. Grigsby also was given two pieces of "San Ildefonso black-on-black pottery" as a gift from the presidents of the district banks, which was paid for by the Federal Home Loan Bank of Topeka and cost $500.

The San Francisco bank submitted bills to the shared expense fund for $22,701.55 through the first eight months of 1986 and $24,721.77 in 1985. The expenses billed to the shared fund include bills for limousines, cocktail parties, hotel rooms, paddleboat rides, and bay cruises.

For example, while at a conference of the district bank presidents in August 1985, the fund was billed $320 for a paddleboat ride for seven people, none of whom were identified.

At a bank presidents' conference in San Francisco a year later, a yacht was chartered at a total cost of $6,924.33, including $882 for wine. Fifty-eight people were entertained on the yacht, according to the San Francisco bank's record.

Rooms at San Francisco's Fairmont Hotel, where Mr. Gray and others stayed at the conference, ranged in price from $145 a night for Ms. Fairbanks to $200 a night for board member Mr. Hovde.

At the end of the San Francisco conference, Mr. Gray traveled to Los Angeles for a dinner in his honor. Miscellaneous expenses of $5,256 were billed to the shared fund for the dinner at the Sheraton Plaza La Reina hotel and Mr. Gray's room and expenses at the Los Angeles International Airport Hilton ran to $406.67 for one night.

Bank Board officials, including Mr. Gray and agency lawyers, have previously defended the shared account fund and the way in which expenses of Bank Board officials were handled. Nonetheless, the expense reimbursement practices of the Bank Board were riddled with practical problems, Mr. Gray admitted recently in a letter to the presidents of the 12 district banks, among others.

These problems apparently helped bring an end to the way expenses were charged to the shared account.

Staff writers Jim McTague and Nina Easton contributed to this story.

Savers . . .

➼ Continued from Page 11

Association to Melvyn Bell in a deal that would include a capital infusion for the thrift.

W.P. Gulley, president and chairman of the thrift company, said that both he and Mr. Bell "will use their collective best efforts to seek infusions of additional capital into Savers Federal" to bring the thrift's capital up to 6% of its liabilities.

While it is believed that the terms of a takeover have been reached, Savers and Mr. Bell have not yet signed an agreement. The new agreement is expected to call for a new holding company to exchange all of Savers' existing common stock for a new class of preferred stock with limited voting rights.

After five years, the preferred stock would be redeemable at a price tied to Savers' earnings performance. However, the total redemption price would not be more than $20 million.

Savers Inc. was believed to be one of the two thrift institutions whose bad fortunes stung the second quarter performance of Worthen, along with First South Federal Savings & Loan Association.

Both institutions reported second-quarter losses stemming from problem loans to commercial real estate developers in the Southeast. Those disclosures caused the prices of their stocks to nosedive, thus reducing the value of collateral backing Worthen's loans to certain individuals. ■

Strategic Dates

June 30, 1987

VAMP: The voluntary assisted merger program, the Federal Home Loan Bank Board's program enabling ailing thrifts to merge voluntarily with healthy associations and still gain federal aid, is extended until this date. The board's adoption of the program in 1982 was a temporary measure designed to assist those small thrifts that were suffering from the squeeze of high interest rates coupled with portfolios full of long-term, low-yielding mortgages.

Random Thoughts

By SANFORD ROSE

It is commonly believed that mortgages outperform virtually all other fixed-income securities. Indeed, many years ago, when yield curves sloped upward nearly all the time and interest rates behaved quite tamely, many bankers advocated a portfolio strategy based on the purchase of federal funds to finance long-term, fixed-rate mortgages.

Over a long period of time, such a strategy would allegedly guarantee maximum returns. However, the long run is composed of a series of short runs, and given rate volatility and yield curve vicissitudes, banks and thrifts that stick to such an "optimal" long-term strategy are very likely to perish in the short run.

Still, many thrifts and a few banks continue to embrace a variant of that long-term strategy. They short-fund fixed-rate mortgage assets. If rates remain stable, they win. If rates rise, they lose — immediately in a market-value sense, ultimately in an accounting sense.

If rates fall, they gain up to the point where the mortgages prepay.

Random Thoughts: Page 4 ➸

Credit Unions' Deposits Keep Soaring

By L. MICHAEL CACACE

NEW YORK — For the third year in a row, credit unions significantly outpaced savings banks and savings and loans in deposit growth in 1985-86.

Credit Unions

In the 12-month period ended June 30, deposits at credit unions soared 20.4%, compared with a 5.8% gain for savings institutions. A year earlier, credit union deposits rose 18.4%, while savings institutions posted an 11.1% gain. And during the year ended June 30, 1984, credit union deposits rose 19.4%, compared with 11.3% for savings institutions.

In addition, data on the asset composition of the top 100 credit unions in the field show that credit unions have been able to keep their share of the new auto lending market while expanding into the mortgage lending market.

These are some of the findings of the *American Banker's* annual survey of the top 100 credit unions, published today.

Top Five Credit Unions

Assets in Millions of Dollars on June 30, 1986

1. Navy FCU, Washington, D.C.	$2,401
2. United Air Lines Empl. CU, Chicago	1,303
3. Pentagon FCU, Arlington, Va.	1,299
4. State Employees CU, Raleigh, N.C.	1,169
5. Boeing Employees CU, Seattle	677

Deposit growth at credit unions was helped this year by "cross-intermediation" in the thrift industry. Cross-intermediation is the transferring of maturing deposit funds from one segment of the thrift industry to another.

In this period of declining interest rates, some credit union members have been transferring maturing deposit funds from their savings institution accounts into their credit union accounts to take advantage of the higher interest

Credit Unions: Page 24 ➸

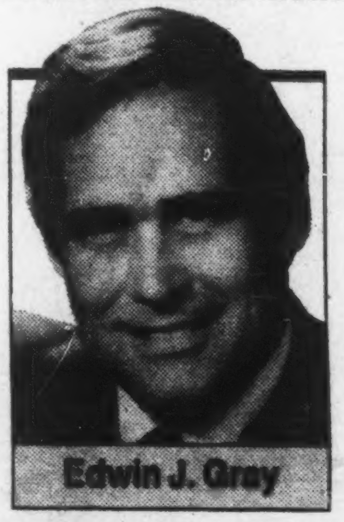
Gray Faces End of Term With Dim Hope

Bank Board Head Says In Interview He's in Debt

By ROBERT M. GARSSON

WASHINGTON — Since his appointment as chairman of the Federal Home Loan Bank Board in 1983, Edwin J. Gray has been singularly concerned with efforts to save the battered thrift industry and its rapidly depleting insurance fund.

Today, as Mr. Gray's term of office nears its last six months, he is still working to shore up the industry and breathe life into the almost bankrupt Federal Savings and Loan Insurance fund.



Edwin J. Gray

But now he has the added burden of coping with a personal scandal. Last week, the board released several thousand pages of documents that outlined how the agency's senior officials had traveled extensively — and sometimes lavishly, Mr. Gray acknowledged — at the expense of the industry they regulate.

Decision Soon on Thrifts' Investments
Page 10

Right now, Mr. Gray said in an interview, he would like nothing more than "to get this whole matter behind us."

That may prove difficult, however. With Congress set to return in January, Mr. Gray's last six months in office are likely to be dominated by questions about the Bank Board's use of a shared

High Court Views Bank Tax Liability

By BART NAYLOR

Washington Bureau

WASHINGTON — The Supreme Court on Monday heard a case that tests how easily the government may use banks to collect taxes.

The case is not expected to be decided by the court for several months.

In the case titled Jersey Shore State Bank v. United States, a Pennsylvania-chartered bank was charged employment taxes owed by Pennmount Industries Inc., a now-bankrupt furniture maker that had borrowed money from the bank.

When Pennmount would not pay taxes it owed, the Internal Revenue Service turned to the Jersey Shore State Bank, Jersey Shore, Pa. Tax officials claimed that Jersey Shore had paid wages directly to Pennmount employees and therefore was liable for withholding taxes.

Martin Flayhart, attorney for Jersey Shore, told the high court on Monday that the government had failed to give proper notice to the bank that it would seek the tax. Justice Byron White agreed rhetorically: "How can a bank protect itself?"

U.S. Attorney Alan I. Horowitz, however, contended that no notice is required. "The government doesn't have to give notice on taxes, just like it doesn't have to give notice to a bank to make good loans," he said.

In a friend-of-the-court brief, the American Bankers Association has emphasized that if no notice is given, then a bank has no protection through the statute of limitations. The tax suit began in 1983 against the bank on tax problems that began in 1977. ■

Credit Unions . . .

➵ Continued from Page 1

rates offered at credit unions.

For example, according to data from the Credit Union National Association, the average rate at midyear on regular savings shares at credit unions was 6.80%, and the average weighted offering rate on certificates of deposit of various maturities was 7.70%.

By contrast, the rate on money market deposit accounts at savings institutions insured by the Federal Savings and Loan Insurance Corp. was 6.18% in June. And the average weighted offering rate on CDs was 7.46%, according to the Federal Home Loan Bank Board.

Ed Callahan, the former chairman of the National Credit Union Administration and now the president of Callahan & Associates Inc., a Washington credit union consulting firm, says that cross-intermediation is attributable to two factors.

'A Matter of Confidence'

"First, it's a matter of confidence more than the interest rate differential," Mr. Callahan says. "Because of the turmoil in the marketplace, credit union members are retreating to the safety of their credit unions. Second, you must remember that credit unions are in a vast expansion mode, and their asset and deposit growth reflects this expansion."

The higher deposit growth rate at credit unions helped them increase their share of the thrift deposit market. At midyear, credit unions had 12% of the thrift industry's deposits, compared with 10.7% on June 30, 1985, and 10.1% on June 30, 1984.

Credit unions have been able to offer higher interest rates than savings institutions on different types of deposits because of their lower operating costs, which, in turn, are attributable to several factors.

First, credit unions are nonprofit organizations and therefore do not pay taxes. Second, many credit unions use volunteer workers and boards of directors to reduce costs. Third, credit unions have experienced lower loan losses because of the "common bond" of membership.

The *American Banker* survey of the top 100 credit unions did not examine the asset composition of these institutions for various trends and changes.

American Banker Report Available on Diskette

The data presented in today's report on the top credit unions are available on a computer diskette for $100 (New York residents please add sales tax).

The diskette version expands upon the printed report by including data on the top 130 credit unions. In addition, for all of the categories of information included in today's tables (member savings, total capital, etc.), the diskette includes comparable figures for June 30, 1985.

The diskette uses formats suitable for most personal computer users and allows for easy manipulation and analysis.

To order your diskette, write American Banker Data Service, American Banker, One State Street Plaza, New York, N.Y. 10004. Outside of New York, phone orders may be placed without charge by calling Debra Crocco at 800-322-0047. New York State residents may call 212-943-8276.

The *American Banker* also has available a diskette of its report on the top 300 mortgage companies published in the Nov. 21, 1986 issue, pg. 16. The cost is $100.

GEICO'S
TAX BREAK FOR
CORPORATIONS,
BANKS & THRIFTS

GEICO's Adjustable Rate Preferred Fund yields tax-advantaged dividends up to 92% free of federal income taxes.

The measure of a successful cash management program is not what you earn, but what you keep – *after taxes.*

With GEICO Adjustable Rate Preferred Fund, you keep more, because the Fund's dividends qualify for the 80% dividends-received deductions. The Fund offers Financial Officers a prudent, efficient means to earn attractive rates and keep 92% of earnings – after taxes.

A corporation which otherwise would pay the maximum 40% rate will pay only 8% tax on the Fund's dividends in 1987.

Dividends on the underlying securities are adjusted quarterly, aligning yields with current markets to minimize share price fluctuations. Portfolio diversification results in still further stability.

You earn dividends daily. Monthly distributions can be in cash - or in shares to increase compounding.

Shares may be redeemed at their then current net asset value by telephone for next-business-day federal funds wire. Or by check.

No sales charge for purchases, reinvestments or redemptions.

96-Day Yield
5.72%*
Delivers
8.77%
Effective Tax
Equivalent
Annualized Yield

**Calculated on the Fund's net investment income and average price per share for the 96-day period ending 12/4/86. Yields and share prices will fluctuate. Assumes 40% corporate tax and all distributions qualify for the 80% dividends-received deduction.*

For more complete information, including management fees and expenses, call for a free prospectus. Please read it carefully before you invest or send money.

SHORT TERM FLOATING RATE NOTES
$300,000,000

Dated December 11, 1986 Due June 11, 1987
Price 100% Series 6-87

The interest rate of the Notes will be subject to weekly adjustment on the calendar day following each auction of 91-day Treasury bills, and will be equal to 30 basis points above the "91-Day Treasury Bill Rate" (expressed on a bond equivalent basis). Interest on the Notes is paid at maturity and accrues from December 11, 1986. The Notes are definitive securities and will be issued only in bearer form.

These notes are the obligations of the Student Loan Marketing Association, a federally chartered, stockholder-owned corporation, and are not obligations of or guaranteed by the United States. The Notes are legal for investment by savings banks, insurance companies, trustees and other fiduciaries under the law of many states.

This offering is made by the Student Loan Marketing Association with the assistance of a nationwide Selling Group of recognized dealers in securities.

Credit Unions Again Outpace Other Thrifts in Deposit Growth

➨ Continued from Page 24

However, Chip Filson, vice president of Callahan & Associates Inc., did examine the asset portfolio of the top 100 credit unions during the 18-month period from December 1984 to June 1986.

During that period, Mr. Filson finds that loans as a percentage of assets at these institutions have remained virtually unchanged at 60%. In addition, the top 100 credit unions were able to maintain their share of the new auto lending market, despite the dealer-financing programs of the nation's Big Three auto companies.

Mr. Filson finds that the ratio of new auto loans to total loans at the top 100 was relatively stable over the period. It was 27% at yearend 1984, 28.9% at yearend 1985, and 28% at midyear 1986. Data showing the effect of the recent spate of incentive programs by the Big Three automakers this fall are not yet available.

Another finding is that a new growth area for the top 100 credit unions has been mortgage lending. During the period, mortgage lending as a percentage of loans rose from 15.3% on Dec. 31, 1984, to 18% on June 30, 1986.

Responding to Consumer Needs

Mr. Filson says, "Credit unions are increasing their activity in the mortgage lending area in response to the needs of their consumer constituency. Typically, credit unions begin by making second-mortgage loans. As they become familiar with the paperwork involved with mortgage loans, they then move into first-mortgage lending."

The current survey results are presented in seven statistical listings. The main listing ranks the top 100 credit unions by total assets at midyear 1986 and midyear 1985. Also shown are total member savings (deposits), total capital, the number of regular savings accounts, and the capital-assets ratio for each institution as of June 30.

Two tables rank the top 25 credit unions in capital and individual retirement accounts, respectively. And four tables summarize and highlight the data in the main listing.

Among other major findings of the survey:

- The Navy Federal Credit Union, Washington, D.C., remains the top credit union in the nation in total assets, member savings, total capital, number of regular accounts, and IRA deposits. At midyear, Navy Federal had $2.4 billion in assets, up 26% from $1.9 billion the year before; $2.2 billion in member savings, up 26% from $1.7 billion; $150.8 million in capital (all reserves plus undivided earnings), up 29%; and the number of regular share accounts rose 8.4%, to 741,478, from the year before. In addition, it had $429 million in IRA deposits, up 40% from $307 million at midyear 1985.

Navy Federal had $2.2 billion in deposits at midyear, making it 69th among all thrifts — savings and loans, savings banks, and credit unions — up from 90th position a year earlier. Its IRA deposits, however, rank it among the top 25 thrifts in this category.

- United Air Lines Employees Credit Union, Chicago, became the nation's second largest credit union, with a 51.6% gain in its assets to $1.3 billion at midyear from $859.9 million a year earlier, when it ranked fourth.

Dick Heath, a senior vice president, attributes the gain to good management. "We've been in a very enviable position to pay very competitive dividend rates," Mr. Heath says.

"To illustrate, in March of last year we were paying 10.5%. In March of this year, our dividend rate was 9.5%. Our latest dividend payout in September was 8.5%," he says. "Some of our members had long-term CDs and IRAs outside the credit union, but they have been moving those funds into the credit union."

United Air Lines surpassed both the Pentagon Federal Credit Union, Arlington, Va., which fell one notch to third with $1.29 billion in assets, and the State Employees Credit Union, Raleigh, N.C., which fell one position to fourth with assets of $1.2 billion.

- Among the top 10 credit unions, Boeing Employees Credit Union, Seattle, posted the largest gain in rank, advancing five places to fifth position with $677 million in assets on June 30, up 41% from the year before.

- The largest percentage gain in assets among the top 100 credit unions was posted by Progressive Consumers Federal Credit Union, Malden, Mass. Its assets rose 64% to $217.8 million over the year ended June 30, 1986, from $132.7 million on June 30, 1985, and it moved up 45 places to rank 62d. Progressive, which changed to a federal charter in September 1985, attributes the gain to its competitive rates on share accounts. The rate is currently 7¾%, down from 9.0% in April.

- For the third year in a row, the Orange County Teachers Credit Union, Santa Ana, Calif., which ranked 20th in assets, with $385 million, had the best capital-to-assets ratio among the top 100 credit unions: 14.7%. In addition, Orange County Teachers is the second largest credit union in capital, with $56.4 million on June 30.

The second best capital ratio, 9.6%, was posted by the $224 million-asset Robins Federal Credit Union, Warner Robins, Ga., the nation's 59th largest credit union. The average capital ratio for the top 100 credit unions was 5.1%. ■

The Thrift Industry at a Glance

Summary Data: June 30, 1986 Versus June 30, 1985

(Dollar Amounts in Billions)

TOTAL ASSETS	6/30/86	6/30/85	% Change
All Thrifts	$1,503.8	$1,356.2	10.9

Chemical to Acquire Texas Commerce

By BART FRAUST
and JOHN P. FORDE

NEW YORK — Chemical New York Corp. said Monday it will acquire Texas Commerce Bancshares Inc., Houston, in a deal valued by Chemical at $1.19 billion in cash and securities. Using Chemical's price estimate, the deal is the largest U.S. bank merger ever in terms of total purchase price, surpassing the $1.08 billion that Wells Fargo & Co. paid to acquire Crocker National Corp. earlier this year.

Interstate Banking

In a unique aspect of the transaction, about $300 million in nonperforming Texas Commerce assets, one-third of total nonperformers, will be transferred to a new bank whose stock will be spun off to current Texas Commerce shareholders on a pro rata basis.

In terms of size, the $18.9 billion-asset Texas Commerce is the second-largest domestic banking organization to be acquired by another U.S. banking company. Crocker had $19.2 billion in assets at the time its deal with Wells Fargo was announced. The acquisition will place the $56 billion-asset Chemical in a virtual tie with J.P. Morgan & Co. as the nation's fourth-largest bank holding company, based on Sept. 30 rankings. As of that date, Chemical ranked seventh.

If First Interstate Bancorp succeeds in its attempt to acquire BankAmerica Corp., it would surpass both the Chemical-Texas Commerce and the Wells-Crocker deals in terms of both price and size.

Prospects for Other Texas Banks
Page 38

The Chemical-Texas Commerce deal also marks the first major interstate acquisition of a Texas institution since that state's legislature earlier this year passed a measure allowing out-of-state banks to acquire Texas banks. The statute takes effect Jan. 1.

Experts in banking law said this marks the first time the spinoff technique has been used as part of a negotiated bank merger without regulatory assistance.

John D. Hawke Jr., á Washington banking attorney and former general counsel to the Federal Reserve Board, said the spinoff aspect of the deal is reminiscent of the 1984 federal rescue of Continental Illinois Corp. in that some of the burden of potential loan losses will fall on existing shareholders.

SunTrust Banks Inc., Atlanta	Third National Corp., Nashville, Tenn.	$757.5M

Deals ranked by price.

Random Thoughts

By SANFORD ROSE

Marcelle Arak, a vice president of Citicorp Investment Bank, points out that the tax law is changing bank investment preferences quite dramatically. One obvious shift: away from municipals and toward mortgage-backed securities.

In October of this year, a bank purchasing a 7% muni and funding it with 6% money could earn an aftertax yield of 3.21%, assuming, of course, deductibility of 80% of the interest carrying cost. A 9% Ginnie with a yield of 9.20% would have netted an aftertax return of 1.73%, assuming the same money cost. And a treasury bond yielding 7.50% would have added only 81 basis points to the bottom line.

Under the new tax law, the municipal obviously becomes much less attractive. Since deductibility of carrying costs is gone, the bank gets to keep only 100 basis points (7% minus 6%).

By contrast, the new 34% marginal tax rate pushes up the treasury's contribution to 99 basis points — 7.50% minus 6% multiplied by one minus .34. The Ginnie, however, assumes pride of place — 9.20%

Yanks in Europe

American bankers have been a common sight in Europe for almost as long as America has existed as a nation. The U.S. war of independence against Britain, after all, was financed in Europe, mostly in Paris and Amsterdam. The first U.S. banks to formally expand abroad came to Europe as their natural, second home. Chase Manhattan opened in London in 1887. Morgan Guaranty set up shop in the shadow of the Bank of England in 1892.

American banks in Europe are a much more potent force today than they were at the turn of the century. In major European banking capitals such as London and Frankfurt, American banks represent the largest foreign contingent. Nearly 60 American banks have a presence in London today, while just over half that many are established in Frankfurt.

More important than sheer numbers, however, is what the banks can do. With the wave of deregulation that has swept across Europe in recent years showing no signs of slackening, U.S. banks in Europe have found themselves with a plethora of new markets to exploit. They have gone aggressively into the securities business and are in the process of turning themselves into "universal banks" in the image of the big German and Swiss banks.

As such, banking developments here may be leading those in the United States. If the Glass-Steagall Act is ever abolished, what is happening here now may represent the future of commercial banking in America.

European Assets of Top 10 Banks

On Dec. 31, 1985 (In Millions of Dollars)

Thrift Correspondent Boom

Their Deposit Balances At Banks Jump by 30%

By L. MICHAEL CACACE

NEW YORK — For the second year in a row, the thrift industry continues to be the fastest growing sector of the correspondent banking market, the *American Banker*'s 24th annual survey of correspondent banking shows.

Correspondent Bank Tables
Pages 21-31

Thrift correspondent balances — or demand deposits placed by thrifts at U.S. commercial banks — grew by 30% over the 12-month period ended June 30, after growing by 23% the year before. In contrast, correspondent bank balances deposited by domestic and foreign commercial banks — which make up the main sector — rose

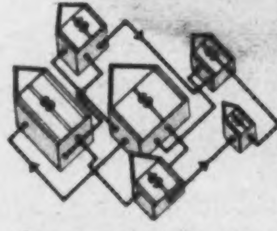
Thrifts Joining Correspondent Game

Big Banks See Good Opportunities with Thriving Savings and Loans

By LISABETH WEINER
Midwest Bureau



Correspondent Banking

CHICAGO — Correspondent banking remains profitable, but bankers are changing both the types of services they offer their correspondents and the types of customers they serve.

Money center banks, most of which are diversifying their own operations into investment banking or merchant banking, are now finding they can provide some of those same activities to their smaller correspondents. The nation's mightiest banks, as well as superregionals and other regional banks, are also finding a wealth of correspondent banking opportunities among savings and loans that are now emerging as healthy, well-rounded financial institutions.

According to the *American Banker* annual survey of correspondent banking, demand deposits due thrifts rose in 1986 by more than 30% to $5.6 billion. Because the survey is based on data taken at a specific point in time rather than on performance averaged over a year, these numbers can and do fluctuate dramatically. And balances taken on a Monday, which was the day on June 30, 1986, also tend to be higher than those taken on other weekdays. But based on

Thrift Panel Raps Rules On Appraisals

Bank Board Committee Fears Collateral Disaster

By JIM McTAGUE
Washington Bureau

WASHINGTON — Tough new real estate appraisal guidelines for federally chartered savings and loans may backfire and weaken the industry instead of strengthening it, a committee of the Federal Home Loan Bank Board warned on Thursday.

The Federal Savings and Loan Advisory Council, whose members are selected from different quarters of the financial industry, said the three-month-old guidelines may result in lower appraisals for existing real estate collateral held by thrifts, thereby reducing their net worth "at a time when that can have substantial adverse effects."

The council, which met here on Wednesday and Thursday, also recommended that federally chartered thrifts be allowed to expand service corporation activities relating to residential real estate.

Council members urged the Bank Board to reevaluate the new appraisal standards, which went into effect on Sept. 11.

"It looks like a case of overkill to us. The Bank Board should revisit the subject quickly," said council member James Schmidt.

"I hear you," said Bank Board member Lee H. Henkel Jr., emphasizing that he would favor less complicated guidelines if they resulted in obtaining the "right number from appraisers."

Reacting to abuses such as inflated appraisals, which were blamed for the demise of a number of S&Ls, the Bank Board in September issued "memorandum R-41c," a comprehensive system

Demand deposits due to all banks are total correspondent balances. **Total correspondent balances** are the sum of domestic correspondent balances and foreign correspondent balances. **Domestic correspondent balances** are the sum of domestically-booked demand deposits due to other depository institutions in the U.S. (thrift institutions) plus domestically-booked demand deposits due to other U.S. commercial banks in the U.S. **Foreign correspondent balances** are the sum of domestically-booked demand deposits due other banks in foreign countries; domestically-booked demand deposits due foreign government and official institutions; and clearing balances in the bank's domestic Edge bank subsidiaries. **Clearing balances** are the sum of transaction accounts due foreign government and official institutions; transaction accounts due commercial banks in the U.S.; and transaction accounts due banks in foreign countries. **Time and savings deposits due to all banks** are nontransaction accounts due all domestic and foreign banks, as defined above. The sum of demand deposits due to all banks plus time and savings deposits due to all banks are called **total interbank deposits.**

(a)— In May, the bank merged with Crocker National Bank under the latter's charter. June 30, 1985, data, therefore, are for the old Crocker National Bank.

Demand deposits due to all banks are total correspondent balances. **Total correspondent balances** are the sum of domestic correspondent balances and foreign correspondent balances. **Domestic correspondent balances** are the sum of domestically-booked demand deposits due to other depository institutions in the U.S. (thrift institutions) plus domestically-booked demand deposits due to other U.S. commercial banks in the U.S. **Foreign correspondent balances** are the sum of domestically-booked demand deposits due other banks in foreign countries; domestically-booked demand deposits due foreign government and official institutions; and clearing balances in the bank's domestic Edge bank subsidiaries. **Clearing balances** are the sum of transaction accounts due foreign government and official institutions; transaction accounts due commercial banks in the U.S.; and transaction accounts due banks in foreign countries. **Time and savings deposits due to all banks** are nontransaction accounts due all domestic and foreign banks, as defined above. The sum of demand deposits due to all banks plus time and savings deposits due to all banks are called total interbank deposits.

Demand deposits due to all banks are total correspondent balances. Total correspondent balances are the sum of domestic correspondent balances and foreign correspondent balances. Domestic correspondent balances are the sum of domestically-booked demand deposits due to other depository institutions in the U.S. (thrift institutions) plus domestically-booked demand deposits due to other U.S. commercial banks in the U.S. Foreign correspondent balances are the sum of domestically-booked demand deposits due other banks in foreign countries; domestically-booked demand deposits due foreign government and official institutions; and clearing balances in the bank's domestic Edge bank subsidiaries. Clearing balances are the sum of transaction accounts due foreign government and official institutions; transaction accounts due commercial banks in the U.S.; and transaction accounts due banks in foreign countries. Time and savings deposits due to all banks are nontransaction accounts due all domestic and foreign banks, as defined above. The sum of demand deposits due to all banks plus time and savings deposits due to all banks are called total interbank deposits.

STAY AHEAD OF THE COMPETITION

American Banker Correspondent Banking Report Available on Diskette

Competition in correspondent banking is fierce. The difference between success and failure means zeroing in on market opportunities. That's why it's essential to know where you stand. The diskette version of today's *American Banker* statistical report provides an up-to-the-minute database of information on the competition.

Why spend countless hours inputting or manipulating data by hand when this diskette allows for convenient analysis of today's important correspondent banking information. The diskette, formatted for most personal computers, is available for $150. (New York State residents please add sales tax.)

To order your diskette or to make inquiries, write American Banker Data Service, American Banker Inc., One State Street Plaza, New York, NY 10004, or telephone Debra Crocco without charge at *800-322-0047*. New York residents please call *212-943-8276*.

Demand deposits due to domestic banks are domestic correspondent balances. Domestic correspondent balances are the sum of domestically-booked demand deposits due to other depository institutions in the U.S. (thrift institutions) plus domestically-booked demand deposits due to other U.S. commercial banks in the U.S. Time and savings deposits due to domestic banks are nontransaction accounts due domestic banks and thrifts. (a)— In May, the bank merged with Crocker National Bank under the latter's charter. June 30, 1985, data, therefore, are for the old Crocker National Bank.

Banks by Demand Deposits Due Domestic Banks

Banks with Domestic Correspondent Balances of $10 Million or More (Dollar Figures in Thousands)

Demand deposits due to thrifts are also called **correspondent balances due thrifts.** Thrift institutions include: mutual and stock savings banks, building or savings and loan associations, homestead associations, cooperative banks, and credit unions. (a)— In May, the bank merged with Crocker National Bank under the latter's charter. June 30, 1985, data, therefore, are for the old Crocker National Bank. Crocker's thrift correspondent balances were minimal. However, Wells Fargo Bank had $35.7 million in thrift correspondent balances on June 30, 1985, to rank 28th among the top 100 banks in these deposits on that date.

Demand deposits due to foreign banks are foreign correspondent balances. **Foreign correspondent balances** are the sum of domestically-booked demand deposits due other banks in foreign countries; domestically-booked demand deposits due foreign government and official institutions; and clearing balances in the bank's domestic Edge bank subsidiaries. **Clearing balances** are the sum of transaction accounts due foreign government and official institutions; transaction accounts due commercial banks in the U.S.; and transaction accounts due banks in foreign countries. **Time and savings deposits due to foreign banks** are nontransaction accounts due foreign banks, as defined above. **(e)**— Edge bank data for 6/30/85 were not available. **(a)**— In May, the bank merged with Crocker National Bank under the latter's charter. June 30, 1985, data, therefore, are for the old Crocker National Bank.

(Continued from page 30.) Total interbank deposits are demand, time, and savings deposits due to all banks.

Thrift Industry Fuels Boom In Correspondent Banking

➛ **Continued from Page 1**

16% over the year ended June 30, 1985, after declining by 1.1% the year before. As a result, thrift correspondent balances now account for a larger share of the total correspondent deposit market — 12% this year, compared with a 10.8% share in 1985 and an 8.8% share in 1984.

The main reason for the growth in the thrift correspondent sector is the growth in checking accounts offered by thrifts. Most of these checks are cleared by a thrift's correspondent bank. As the volume of checks at thrifts grows, bigger correspondent balances are required to compensate the banks for clearing services.

According to data from the Federal Reserve Board, checkable deposits at thrifts totaled $63 billion on June 30, up 30.1% from $48.4 billion on June 30, 1985. A year earlier, thrift checking deposits grew 27%.

The latest Fed data show that the growth in thrift checking deposits continues strong. They totaled $70.6 billion at the end of November and are now growing at an annual rate of 29%.

Over the year ended June 30, domestic commercial bank correspondent balances, which account for 64% of total correspondent balances, rose 10.3%.

This gain is attributable in part to the decline in interest rates over the period. The bulk of correspondent services are paid for by compensating demand balances maintained by respondent banks with their correspondent bank. A decline in interest rates lowers the value of these balances. Other things remaining equal, higher balances will be needed by respondents to pay for their correspondent services.

Correspondent banks generally use the 90-day Treasury bill rate — which is called the "earnings credit factor" — to value correspondent balances. The average 90-day Treasury bill for the year ended June 30 fell by 175 basis points from the year before.

Foreign commercial bank correspondent balances, which constitute 24% of total correspondent balances, were up by almost 32% over the year ended June 30. However, the growth in this sector was affected by a factor not related to correspondent banking.

This year June 30 fell on a Monday, whereas last year it fell on a Sunday. Monday figures for New York banks are usually much higher than weekend figures, because of arbitrage opportunities in the Eurodollar market over the weekend. Banks tend to withdraw funds over the weekend and redeposit them on Monday.

Seven of the top 10 banks in foreign correspondent balances are New York banks. Six of these banks had a combined gain in their foreign correspondent balances of 52%. And these six banks accounted for more than 80% of the gain in foreign correspondent balances. Excluding these six banks, foreign correspondent balances rose approximately 12% last year.

Other Survey Findings

- There were 378 banks in the United States with total correspondent balances of $10 million or more on June 30. These deposits totaled $46.7 billion, up 17% from $39.9 billion for the same banks a year earlier.
- The thrift correspondent balance component of total correspondent balances rose 30.2% over the 12-month period ended June 30. The 378 banks had $5.6 billion in thrift correspondent balances at midyear 1986, or 12% of total correspondent balances. A year earlier, these banks had $4.3 billion in thrift correspondent balances, or 10.8% of the midyear 1985 total.
- The 378 banks had domestic commercial bank correspondent balances of $29.9 billion, up 10.3% from $27.1 billion the year before.
- The 378 banks had foreign bank correspondent balances of $11.2 billion, up 31.7% from $8.5 billion a year earlier.
- The top bank in total correspondent balances is Chase Manhattan Bank, New York, with $3.3 billion in these deposits, up 38% from $2.4 billion a year earlier, when it ranked second.

Chase surpassed Manufacturers Hanover Trust Co., New York, in total correspondent balances. Manufacturers Hanover ranked second in these balances, with $2.9 billion, down 4% from $3 billion a year earlier.

- Manufacturers Hanover remained the top bank in domestic correspondent balances, with $2.1 billion, up 30% from a year earlier. In addition, it surpassed Union Bank, Los Angeles, as the top bank in thrift correspondent balances, with $329 million, up 115% from $153 million the year before.

Union Bank ranked third in thrift correspondent balances this year, with $221 million, down 45% from $402 million a year earlier.

- The top bank in foreign correspondent balances is Citibank, New York, with $2.1 billion, up 124% from $924 million the year before, when it ranked third.

Manufacturers Hanover, which had ranked first in foreign correspondent balances last year, with $1.4 billion, fell to fifth place this year, with $757 million in these balances. ■

How the Survey Was Conducted

The data for the *American Banker* survey of correspondent banking are taken from an *American Banker* questionnaire asking for information from the federal regulatory report of condition, or "call report," of June 30, 1986.

Specifically, the data requested were from schedule RC-E, Part 1, of the call report. This schedule asks for a breakdown of deposits for a bank and its domestic subsidiaries. In addition, banks with Edge banking subsidiaries were asked to report selected deposit data, as of June 30, for their domestic Edge banking offices from Federal Reserve form FR2886b, which is the Edge bank call report.

For banks failing to report, call report data provided by ADP Data Services Division, New York, were used; Edge bank data, provided by the Federal Reserve Board, were also used.

Total correspondent balances are the sum of domestic correspondent balances and foreign correspondent balances.

Domestic correspondent balances are the sum of domestically booked demand deposits due to other depository institutions in the U.S. and domestically booked demand deposits due to other U.S. commercial banks in the U.S.

Demand deposits due to other depository institutions are also called thrift correspondent balances. Thrift institutions include mutual and stock savings banks, building or savings and loan associations, homestead associations, cooperative banks, and credit unions.

Foreign correspondent balances are the sum of domestically booked demand deposits due other banks in foreign countries, domestically booked demand deposits due foreign government and official institutions, and clearing balances in the bank's domestic Edge bank subsidiaries.

Clearing balances are the sum of an Edge bank's transaction accounts due foreign government and official institutions, plus transaction accounts due commercial banks in the U.S., plus transaction accounts due banks in foreign countries.

Edge banks are international banking and financial vehicles through which U.S. banking organizations can offer international banking services and through which they may compete with similar foreign-owned institutions in the U.S. and abroad. An Edge bank is limited by statute to engage only in activities in the U.S. that are "incidental" to international and foreign business. Many of the major correspondent banks that are headquartered outside New York use their Edge bank subsidiaries to provide correspondent services to their foreign respondent banks.

Most of the top correspondent bankers agree that demand deposit figures provide a good yardstick for measuring the scale of each bank's correspondent business. But, as noted above, these balances are subject to tremendous daily volatility and can shift radically from quarter to quarter.

— **Michael Cacace**

Appraisals . . .

➛ **Continued from Page 1**

to be followed by appraisers when valuing properties for federally insured thrifts. The guidelines, contained in a 300-page manual, resulted from deliberations with the appraisal industry.

According to a recent article by lawyer James R. Butler, "It may be possible to satisfy the strict standards of the memorandum only if appraisers are assisted by a coordinated team of legal, accounting, property management, title, and valuation experts." He estimates that a commercial real estate appraisal under the guidelines could cost $25,000 to $50,000.

Mr. Butler added that the guidelines suggest that appraisal updates are required at least every six months.

"It's doubling the cost of appraisals," said Mr. Schmidt. "And it takes more time. Our industry may lose out on quality income projects to competitors like life insurance firms who don't have such hassles."

Ironically, the new guidelines have been praised by some legislators as a model for reform. Congressman Doug Barnard, D-Ga., who headed an investigation that detailed abuses by appraisers and their role in bank and S&L failures, has called for minimum guidelines that incorporate much of memorandum R-41c and more. And Sandra Johnigan, a council member who works for Arthur Young & Co., a Big Eight accounting firm, said R-41c seemed to have the support of her profession.

"Implementation is a big part of the problem, said council member Donald B. Shackelford. "If there are three numbers on the table, the appraisers say the lowest number is the right one. I'm aware of the horror stories from Texas, where the lowest number was the right one [and wasn't used]. But if you apply this across the board, you're going to destroy net worths," he said.

Concerning service corporations, the committee said expanding their role for federally chartered thrifts would help improve the overall capital picture for the industry.

The council recommended adopting a plan conceived by the Federal Home Loan Bank of Indianapolis that would lift many current restrictions on direct investment in mortgage banking companies.

The council also recommended allowing thrifts to own title insurance companies that are residential real estate related; allowing thrifts to form real estate investment trusts for residential properties; having the Bank Board study giving service corporation authority to thrifts for third-party real estate brokerages, and studying an expanded authority of existing service corporations, so that business is not confined to the parent company's customers, as per current regulations. ■

Minnesota . . .

➛ **Continued from Page 8**

these [requirements] have not been complied with," he said.

Marine's application to acquire Community State Bank said it would infuse about $250,000 in capital into the Bloomington bank and hold discussions with community groups, including women's and lower-income groups, Mr. Hatch said.

A spokeswoman for Marine Corp. said it had no response to the complaints because it has not seen them.

Minnesota's interstate banking bill took effect July 1. It allows interstate banking on a reciprocal basis with Iowa, North Dakota, South Dakota, and Wisconsin. The Independent Bankers of Minnesota opposed the law.

The planned purchase by the Marine Corp. is the only interstate acquisition in Minnesota announced so far under the new law.

Marine Corp.'s planned acquisition of Community State Bank also waschallenged earlier this year by community groups in Milwaukee.

In October, one Milwaukee community group said it was dropping its challenge after Marine agreed to lend money and consider establishing a branch in a low-income area of Milwaukee. The community group made its challenge under the Community Reinvestment Act, a federal law designed to pressure banks to meet the financial needs of surrounding communities.

The Independent Bankers of Minnesota want their challenge to be used as a guideline for other banks thatwant to acquire banks in the state, Mr. McCrady said.

"We think that this being the precedent-setting case, if they get by with slipping in under the tent, everyone else will expect to do so and rightfully so," he said.

He said Minnesota banks have a history of being socially responsible and the group feels that banks moving into the state "have to perform as well as existing banks."

Mr. Hatch said it was likely that guidelines would be set. "Usually, the first application really is the pathfinder for others," he said. "I think they [the Independent Bankers] are correct on this."

The Independent Bankers asked that the application be rejected until Marine provides specific commitments on new funds and developmental loans.

Community State Bank is one of the largest independent banks in Minnesota with about $198 million in assets. ■

Banks See Correspondent Opportunities with Thriving Thrifts

➼ Continued from Page 1

conversations with bankers, it is clear that a number of institutions have put a strong emphasis on reaching this customer base.

"Thrifts are offering a myriad of new things along the lines of commercial banking products," said James McClamroch, vice president of financial institutions at Continental Illinois Corp. "Savings and loans are changing from [their] traditional role into more competitive purveyors of financial services. And as they move in this direction they will need more services that a money center bank can offer."

According to the survey, Continental Illinois National Bank and Trust Company of Chicago's thrift business rose by about 76% to $29.3 million in 1986. During the year, the total amount of demand deposits due all banks increased 37% to $742.2 million at Continental. On June 30, 1986, thrift deposits accounted for 3.9% of total correspondent deposits at Continental, compared with 3.1% a year earlier.

At other banks, the relative amount of thrift deposits compared with all correspondent deposits has grown more radically. For instance, at Manufacturers Hanover Trust Co., thrifts accounted for 5% of all correspondent deposits in 1985. By 1986, it had grown to 11% of all deposits. At Chemical Bank, thrift deposits were 0.9% of all correspondent deposits in 1985 but rose to 6.1% of all correspondent deposits in 1986. Again, these figures are based on the *American Banker* survey, which reflects a specific point in time.

In these early stages of change, Mr. McClamroch said, "more than anything, thrifts have been converting from mutual associations to stock companies. This creates different needs, and this is where opportunity lies."

The correspondent relationship then assumes the trappings of a consultant's role. A publicly held company has to learn how to communicate its story, which presents a set of marketing issues that most of these thrifts have never had to deal with before, he said. "If nothing more, we can present them with a textbook on how to change from mutual to stock ownership."

For a large bank like Continental to work efficiently with its smaller correspondents, there is also a need to understand the culture of its clients, Mr. McClamroch added.

"We have to meet the needs of our customers, and they operate in a different environment than we do," he said. "In order to add value, we have to know their current needs. Today those needs are more transaction-oriented, while the demand for correspondent banking in the traditional sense is significantly less than it was."

As the needs of customers become more specialized, one result will probably be the development of niche correspondent banking.

"My sense is that our niche is our own ability to analyze the capital structure of smaller banks, help them in their acquisition strategies, and help them deal with how they are handling changes," Mr. McClamroch said.

Correspondent banking has changed as a result of changes in the world financial markets, said Merrill O. Burns, executive vice president and head of correspondent banking at Manufacturers Hanover. These changes in the financial markets include more efficient markets, which have given rise to such devices as commercial paper. Another is the shift from the use of paper to technology in many of the operational areas of banking.

Manufacturers Hanover has redeployed its resources, Mr. Burns said, to accommodate the newer lines of business that have followed these changes.

Manufacturers Hanover has found its correspondents eager to participate in some of these changes, including the ability to access investment banking services. Bankers have a voracious appetite for access to the capital markets, he said. In asset liability management they are looking for more sophisticated techniques. In treasury management they are interested in such tools as swaps and other money market instruments. And the whole asset sales area, the selling of pieces of corporate loans to correspondents, is very hot right now, he said.

New Methods of Compensation

Because banks are now embarking on the sale of investment banking activities to their correspondents, they must also change the way they charge for services. The traditional method of payment through compensating balances is being superseded, at least in these newer services, with fees when the relationship between the service being performed and the cost of performing it is very clear.

In the case of helping a correspondent with an acquisition, Mr. McClamroch said, "clearly that's a one-time transaction and would usually be done on a fee basis." A compensating balance arrangement is best suited for more traditional correspondent services such as clearing drafts or checks, he said.

While Mr. McClamroch, like many other bankers, prefers deposits, he is actually indifferent to the choice between compensating balances and fees. In deference to the desire to build strong customer relationships, he will often let the customer have his choice.

Top Correspondent Banks In Thrift Deposits

Deposits in Millions on June 30, 1986

1. Manufacturers Hanover Trust Co.	$329.1
2. Irving Trust Co.	248.5
3. Union Bank	221.4
4. First Interstate Bank of California	212.2
5. Bank of America NT&SA	168.0

While compensating balances may increase at a bank as a result of new business strategies, it may also be a reflection of economic events.

During times of relatively low interest rates, it appears that correspondents are more willing to let balances sit with their banks rather than manage and monitor every dollar every day.

While bankers must demand higher compensating balances at times of low interest rates in order to produce the same level of earnings as when interest rates are high, the correspondents also become a little less aggressive about managing their positions.

"Two years ago, when money could earn 10%, every dollar was invested. It was worth it to have money earning 10%," Mr. McClamroch said. "Now interest rates are half that amount and the same deposits earn significantly less."

Robert Knight, who heads Knight Associates, a consulting firm in Alliance, Neb., agrees that bankers don't work their money as hard when interest rates are lower.

"As interest rates trend upward, the correspondents pay more attention to where they stand on every dollar. The earning power of balances increases." Buy that becomes less important as interest rates fall, he said.

Meanwhile, banks usually have a strong preference for balances from their correspondents. "It's cheap money," Mr. Knight said. "They pay the Treasury bill rate on the balances, but they're certainly not investing at the Treasury rate." It's also more difficult to explain fee increases on some of the more traditional correspondent services, such as collections, he added.

William Epstein, executive vice president at Bankers Trust Co., said charging fees for services is "a lot cleaner" than compensating balances, especially with merchant banking-type services.

While the most important goal, of course, is to get an adequate return, whether by fees or balances, Mr. Epstein also said that the investment banking business is fee-oriented. For commercial banks to compete effectively, they must operate the way investment bankers have done, he said. Those who can deliver these investment banking services will find themselves niche players in this field, he said.

Clearly, Bankers Trust sees itself as a niche player that increasingly is providing merchant banking services to correspondent banks. Mr. Epstein said he would like to triple the amount of investment banking business Bankers Trust does with its correspondents over the next two years.

"I think correspondent banking is good business," Mr. Epstein said. "You don't find people jumping to get into it . . . for one thing, the costs of getting in are high. But you don't have to drive excessive volume to be profitable," he said. "What we are doing is taking our investment banking capabilities and . . . applying them to financial institutions. It's a good market." ■

AMERICAN BANKER CAN BE READ DAILY VIA ONLINE SERVICES

American Banker stories and commentaries can be read through several electronic sources providing early-morning access to the news, the ability to search for stories on chosen subjects in past editions, and clipping services, in which stories on preselected topics are delivered automatically to the reader.

Two versions of the newspaper are available.

AMERICAN BANKER NEWS SERVICE contains the full text of stories that appear in today's AMERICAN BANKER and is available at 6 a.m. Eastern time. Financial market commentary, the previous five days' news, updates on industry personnel, the latest and historical treasury rates from THE BOND BUYER, and the full text of selected court decisions, governmental regulations, and speeches and articles NOT published in AMERICAN BANKER also appear. Available through:

BRS Information Technologies — 800-345-4277, file name: BNEW; and NEWSNET — 800-345-1301, file name: FII0, headlines and full text of key stories only.

The complete text of the AMERICAN BANKER, as it appears in the published newspaper, is available to online users within 24 hours of publication. The online version provides the ability to retrieve stories on chosen subjects which have appeared in past editions and can act as a clipping service to inform you when new items of interest are published. Currently available through:

NEXIS — 800-227-4908, file name: AMBANK, January 1979 to present; DIALOG Information Services — 800-334-2564, file name: 625, January 1981 to present; and BRS Information Technologies — 800-345-4277, file name: BANK, January 1981 to present.

Selected stories appearing in the AMERICAN BANKER may be indexed and summarized in FINIS, a database produced by the Bank Marketing Administration (800) 433-9013.

For further information on using AMERICAN BANKER online, please call Greg Payne at (212) 943-6303.

based in Washington, D.C., deals with consumer issues.

"By dropping the rate to 17.5%," Mr. Holstein said, "they've dropped back down to the same range card rates were five years ago, when costs of funds were twice as high as they are today." The national average five years ago was 17.8%, while today it is 18.3%, Mr. Holstein said.

Citicorp, which is the nation's largest Visa and MasterCard issuer, recently dropped the interest rate for its preferred cardholders from 19.8% to 16.8%; at the same time, it raised the annual fee to $50 from $40.

Mr. Holstein said the Chase action "is a better deal for a larger number of people," because it is a rate drop for all cardholders, not just holders of the premier or preferred card.

"But the Citi and Chase actions, taken together, represent a newfound willingness on the part of the large issuers that dominate the credit card market to compete with one another on interest rates and fees, not just travel and entertainment enhancements," he conceded.

Citicorp is the nation's largest bank card issuer, with about nine million accounts, followed by Bank of America with some seven million, and Chase with 4.5 million. ■

Tennessee Bank to Be Acquired

MEMPHIS, Tenn. — First Tennessee National Corp. agreed to acquire Lebanon Bank in Lebanon, Tenn. Under the agreement, 3.1 common shares of First Tennessee will be exchanged for each Lebanon Bank common share. The deal is valued at $30.9 million. ■

Dear Reader, How Are We Doing?

The *American Banker* wants to make sure its statistical listings meet your information needs. So would you spend a moment to give us some feedback on the survey of correspondent banks that appears in today's edition? Please return this questionnaire to L. Michael Cacace, Statistical Chief, American Banker, One State Street Plaza, New York, N.Y. 10004. (212) 943-4836.

(1.) How would you **change** the listing to make it more useful? What would you add?

VOL. CLI NO. 251

Tuesday, December 23, 1986

TODAY

BY BECOMING THE FIRST major domestic or foreign player to solicit mail-in deposits, the Chase Manhattan Bank of Canada just may have found the key to Canadian profitability.................................... 2

UNITED BANK OF DENVER said the FBI is investigating the bizarre theft of about $2.5 million in negotiable securities from the bank last Wednesday. In the course of the theft, an unidentified assailant, who was believed to have a gun, took the manager of the bank's securities department hostage............................ 2

CONGRESS WILL SEE to it that Edwin J. Gray, chairman of the Federal Home Loan Bank Board, gets his way regarding limits on direct investments by thrifts, according to congressional staffers...................... 2

THE MARINE CORP., Milwaukee, has become the second out-of-state bank to crack the Chicago market in the wake of new regional interstate banking laws by acquiring a bank there... 3

MARKETING TODAY

ALTHOUGH DEREGULATION has been a fact of life for several years, the banking industry will continue to change dramatically during the next five years, according to a new study by the MAC Group, an international management consulting firm based in Cambridge, Mass..... 7

THE PRIVATE BANKING group of Summit Bancorp's Chatham Trust Co. sends a message to its affluent customers by operating out of a turn-of-the-century mansion built on what was known as "Millionaires' Row" near Morristown, N.J.......... 7

ONE OF THE HOTTEST books around the Detroit area these days is a 32-page booklet on the Tax Reform Act of 1986, being distributed exclusively by NBD Bancorp, Michigan's largest bank holding company....... 7

IN AN ATTEMPT TO FIND a balance between bank needs and employee rights, the Bank Administration Institute, together with the testing service London House Inc., Park Ridge, Ill., has developed a paper-and-pencil test for job applicants that it bills as reliable, easy to administer, and less intrusive than a polygraph or a urinalysis.............. 16

Executive Changes......................... 5

In the News.. 3

Quote

In order to rationalize their own behavior, they tend to think everybody steals. They think, 'I do it less than others, so I can live with myself.' The employee-thief is going to look at a question like, 'How much did you steal?' and say, 'If I say $0, they're going to know I'm lying; I've taken $1,000, but if I answer $250, I won't look so bad.'

William H. Hanton, manager of management advisory services for the Bank Administration Institute, which has developed a test for banks to screen job applicants. [Page 16]

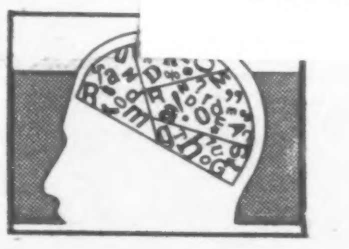
Random Thoughts



By SANFORD ROSE

Richard Lodge, a senior vice president of Banc One of Ohio, has created a certain amount of discomfort for many CEOs of banks that have affiliated with the Columbus-based institution. That's because Mr. Lodge, an investment type, insists on "turning" his portfolio in order to maximize its total rate of return.

Many traditional bankers are fixated on the accrual rate on bonds and thus are prone to ignore the need for active portfolio management. They look askance at the taking of capital gains and, equally important, capital losses. Indeed, in common with some misguided analysts and accountants, these bankers tend to regard securities profits as "dirty earnings."

Thus some CEOs of banks newly bought by Banc One are initially upset when, as of the date of the acquisition, Mr. Lodge almost routinely sells out the entire bond portfolio of the purchased institution, regardless of whether that portfolio is high yielding or low yielding. "Why are you taking us out of a portfolio yielding 12% in an environ-

Commercial Banks Make Their Mark In Mergers and Acquisitions Business

By ANDREW ALBERT

NEW YORK — The chief of mergers and acquisitions at Bankers Trust New York Corp. says his unit's 1986 business volume — in terms of total value of deals completed — is about triple last year's level.

'86 preview '87

A Series of Articles Looking Back and Ahead At Issues Facing the Financial Services Industry

Merger specialists at First Chicago Corp. have seen a big boost in their fee income as a result of completing 50% more deals this year than last. Citicorp also reports significant increases in the volume of its merger and acquisition advisory business in 1986. And officials at Manufacturers Hanover Corp. say the yearend rush to wrap up pending business has weary professionals there "functioning on very little sleep, a lot of coffee, and hope for some much-needed time off next year."

Never mind that the merger business boomed in 1986. That was widely expected once Congress voted to raise the capital gains tax beginning Jan. 1, making it more profitable to sell corporate assets this year than next.

What's more noteworthy is that commercial banking companies finally made a name for themselves as merger and acquisition advisers. After years of stops and starts, they proved they could handle some of the year's larger and more difficult transactions.

Most bank officials acknowledge that their 1986 bottom line was bolstered by a late flood of tax-motivated sales. What remains to be seen is whether the banks can continue to progress in the merger business next year, when no artificial tax reasons will apply.

"Probably everyone is worrying about that a little bit, myself included," said Andrew Robertson, a vice presi-

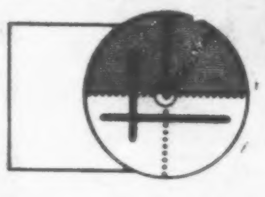
Fleet to Buy Big Servicer of Student Loans

By JEFFREY KUTLER



Corporate Strategy

NEW YORK — The Fleet Financial Group has reached an agreement in principle to acquire AFSA Enterprises, one of the nation's largest processors of student loans, the two companies announced Monday.

Fleet, an $11 billion-asset bank holding company based in Providence, R.I., said it expected to complete the cash purchase by Dec. 31. That is one day before the new tax rules take effect, making corporate acquisitions less financially attractive.

J. Terrence Murray, chairman and chief executive officer of Fleet, said the company intends to diversify fur-

How the Top 10 Firms Were Treated by Time

By THERESIA TREPEL

NEW YORK — The *American Banker* goes back in time today to publish the industry rankings of the top 10 firms in commercial banking, the thrift industry, mortgage banking, and the finance company industry over the past 86 years. The tables on pages 8 and 9 show:

- The top 10 commercial banks in the United States ranked by deposits at six different dates in this century: June 30, 1900; Dec. 31, 1925; June 30, 1959; June 30, 1975; June 30, 1981; and June 30, 1986.
- The top 10 bank holding companies ranked by assets on three dates: Dec. 31, 1976; Dec. 31, 1981; and June 30, 1986.
- The top 10 banks in the world

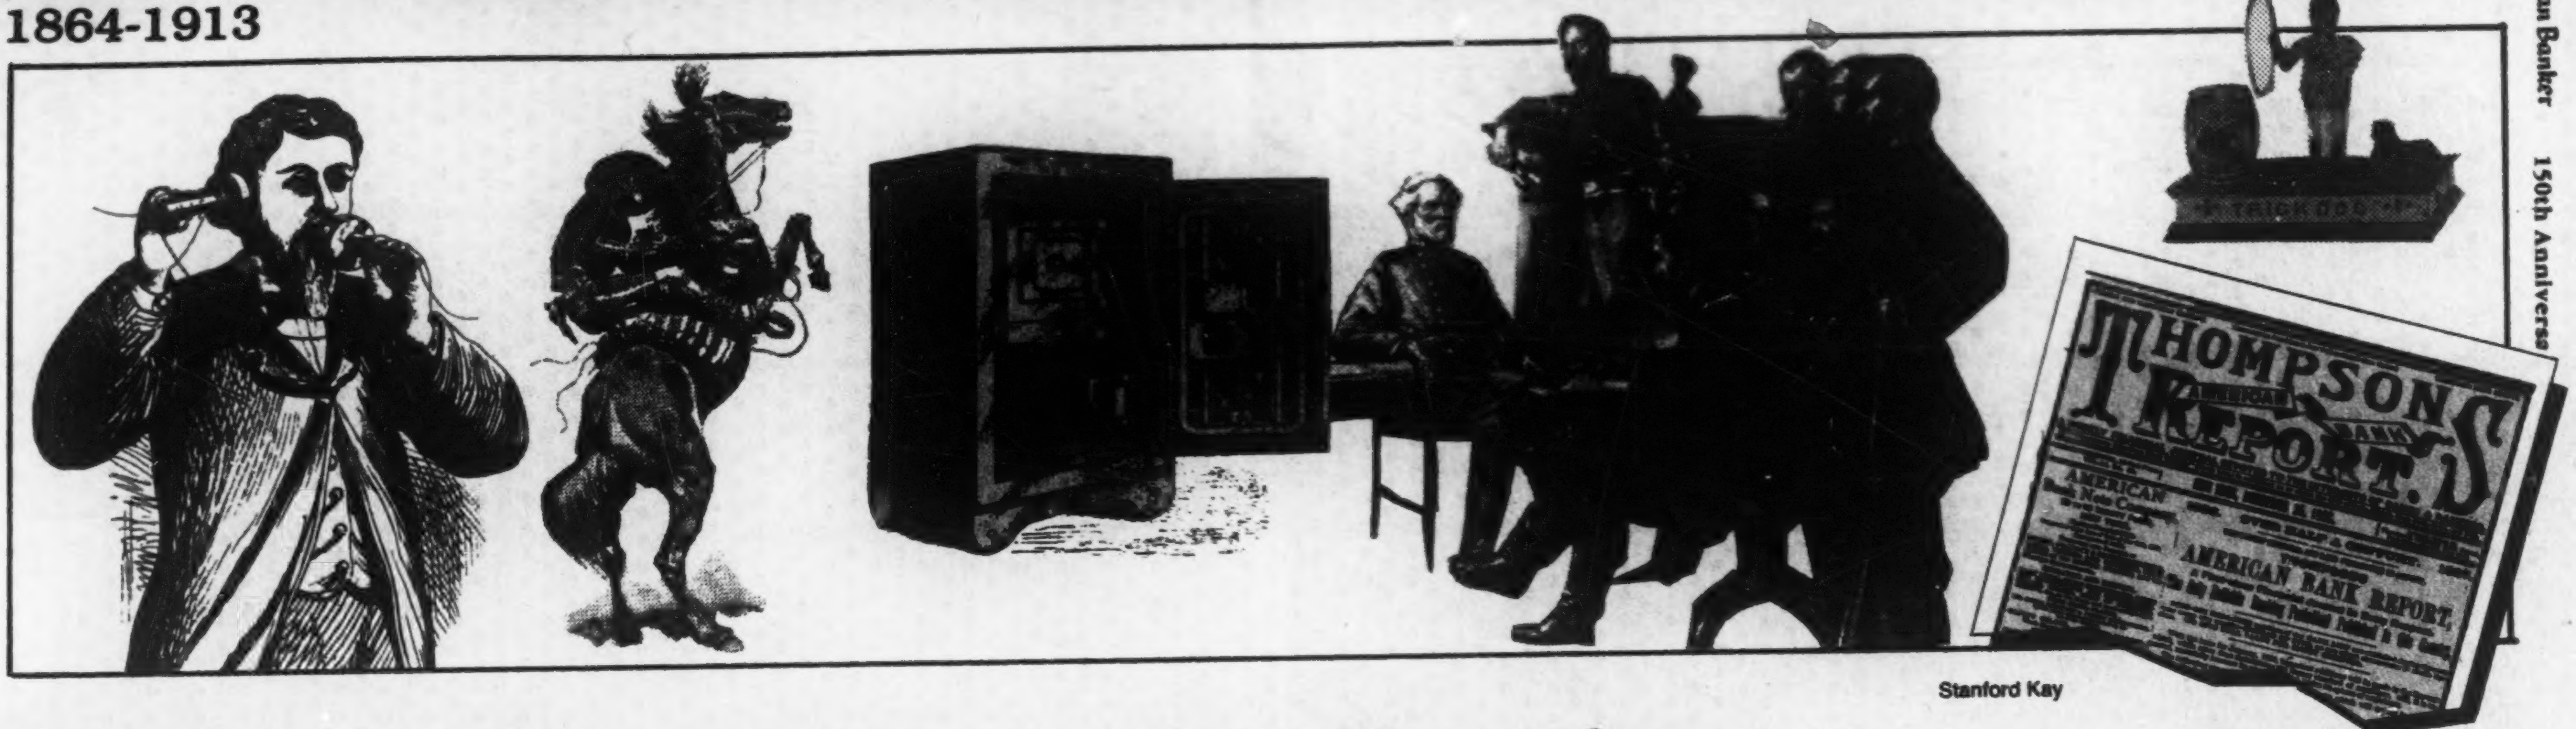
BANKING'S PAST, FINANCIAL SERVICES' FUTURE

1864-1913



Stanford Kay

Twixt Booms and Panics: Banking in the Gilded Age

Fifty years leading to Federal Reserve Act saw ballooning of US banking system and ills that made reform a must.

By Jeffrey Marshall

AT THE END OF 1913, when the Federal Reserve Act was signed into law, the United States was a burgeoning financial giant gradually weaning itself from its dependence on Europe. In the half-century since the surrender at Appomattox, the country had grown at a feverish pace, with the tide of immigration by the turn of the century helping to build urban ziggurats in cities like New York and Chicago.

The nation's banking system had grown with the country, though in a haphazard, often opportunistic way that led many to call for reform. The number of banks grew at a rate five times that of population in 1863-1913; farm towns, even if mere crossroads in a checkerboard of fields, sprouted banks like spring seedlings. In the small town of Meade, Kan., with a population of under 500, eight banks opened in 1886-87.

In 1865, the National Currency Act created a uniform national currency and formalized a system of chartering national banks. Under the rules, a group of five or more "distinguished" citizens could form an "association" for banking. The number of commercial banks leaped from 2,000 in 1865 to 20,000 by 1910, with 7,000 of those being national banks. The total hit 27,000 in 1913, more than twice the level of today. State-chartered banks far outnumbered national banks, but the number of private banks — formed chiefly to provide freighting and trading facilities for America's growing merchant class — had begun dropping sharply, falling from 5,200 in 1900 to 1,500 by 1910.

State-chartered banks proliferated in the late 1800s when state laws, usually requiring less capital than start-up banks, made it easier for leading citizens to start a bank by that route. State banks were usually given more latitude in lending as well, particularly with regard to real estate loans, which were off-limits to national banks.

Banks played a major role in developing the nation's cities, not only through lending but as buyers and custodians of state and local bonds and the utility bonds that financed the growing network of gas and utility lines.

More than anything else, banks were formed to grease the wheels of economic expansion. And expansion was the byword of American enterprise, the product of the concept of Manifest Destiny that pushed the boundaries of the country — and its population center — ever westward. The number of farms and farm output tripled in 1865-1910, while the value of goods and services grew from $6 billion in the late 1860s to $30 billion by 1900.

Railroads, which led much of the expansion, absorbed nearly $10 billion in capital in 1865-1915, much of it in the form of bank loans. Steel output mushroomed to meet the demand for rails and other industrial needs; from 100,000 tons in 1872, steel output passed 10 million tons a year by the turn of the century.

Yet much of the growth in commercial banking came after the dawn of the new century. With an inelastic, gold-backed currency, government-imposed efforts to limit the amount of money in circulation, and the entry of many new banks, the average bank was no larger in 1896 than it had been in 1870.

It was after 1900 that urban banks grew increasingly specialized and sophisticated and began building rapidly. National City Bank, New York — the forerunner of Citibank — had $276 million in deposits in 1913, making it the colossus of its day. The First National Bank of Chicago, chartered in 1863 with initial capital of $100,000, had grown to $145 million in assets that year.

Simultaneous with urbanization, the concentration of deposits and lending increased. The seven largest banks in New York City made 26% of all loans by state and national banks there in 1890; by 1910, that figure had climbed to 46%, and it would continue to rise.

Checking accounts, an important vehicle for merchants by the time the Civil War began, grew as a medium for consumer deposits. But certificates of deposit and savings deposits grew as well, rising from roughly one-fifth of consumer deposits by 1901 to a third by 1913, when half of all national banks were offering savings accounts.

The casualty list of national banks was not as long as many had feared back in 1863, when the system was established. By 1913, 538 of 10,472, or 5.1%, of national banks chartered to that time had failed; in contrast, the failure rate of other types of banks in 1863-96 was 17.6%. Many of those national banks chartered in the first days of the National Bank Act had prospered and were going strong.

IMPORTANT DATES 1865-1913

1865 — Tax on state bank notes is authorized. Allotment system is established for aggregate circulation of national bank notes.
1870 — Legislation raises ceiling of national bank notes in circulation.
1873 — National financial crisis begins in September. Stock market closes for 10 days.
1874 — U.S. Treasury is made the redeeming agency for national banks.
1875 — Resumption Act authorizes resumption of specie payments for paper bills.
1875 — American Bankers Association, the industry trade organization, is founded.
1879 — Resumption of specie payments begins Jan. 1.
1884 — Fiscal crisis begins in New York in May. More than 110 banks fail.
1890 — Financial crisis, concentrated in the East, begins in the fall, peaking in November. Pooled loan certificates are used to stem runs.
1893 — Panic of 1893, brought on by shrinkage in deposits, strikes hard in West and South.
1896 — Populist Party's presidential bid, based on call for minting of silver, fails. Silver agitation starts to fade.

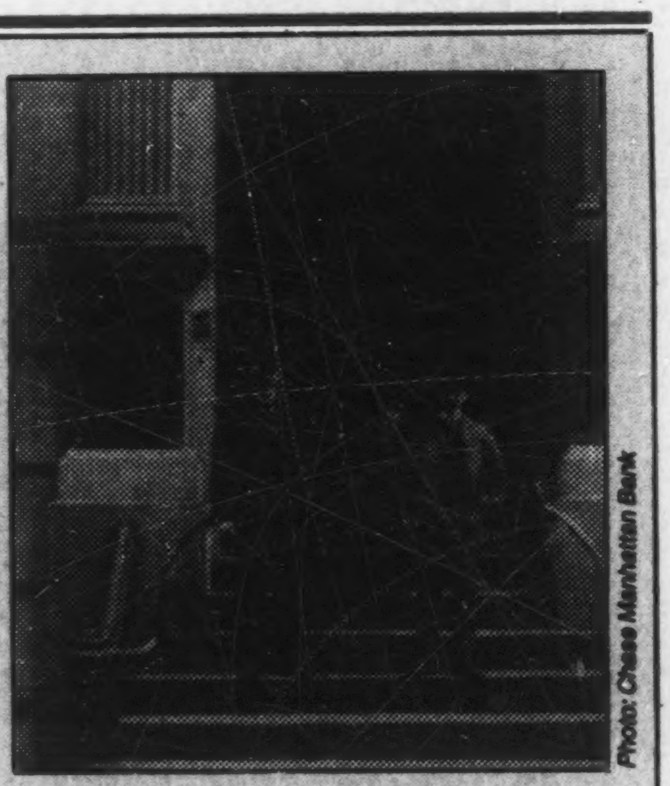


Photo: Chase Manhattan Bank

1900 — Capital requirements are eased for small-town national banks. Gold Standard Act permits banks to issue notes for 100% of capital instead of 90%.
1900 — Boston Clearing House begins uniform clearing procedure in New England that becomes basis for modern check-clearing operations.
1901 — American Institute of Banking is formed.
1907 — Panic almost brings down Wall Street. J.P. Morgan personally leads efforts to save brokerages, major banks.
1908 — Reserve requirement for federal deposits is eliminated.
1913— Federal Reserve Act creates Federal Reserve System.

Still, agitation for reform filled the air in the early 1900s. The inelastic currency and lack of liquidity in a banking system tied to strict observance of legal reserves — often in the form of deposits in exchange for government bonds — tended to foster a boom-and-bust accordion that expanded credit too quickly in good times and contracted too fast when times turned hard. Flows of gold in and out of the country played a significant role, and speculation in boom periods eroded the basic soundness of the system.

The nation's money supply, which grew at a meager 1.3% rate in 1867-79 (actually declining in five of those years), sprinted ahead at a 6% clip in the last two decades of the 19th century. In 1897-1914, it grew at an even faster average of 7.5%, much of that due to increased gold flows into the U.S. from abroad that enabled more money to go into circulation.

The bills that we know today were only a minor element of currency in those days. Federally printed "greenbacks," first issued in the Civil War, by 1913 trailed three other exchange mediums in overall representation in the system — notes issued by national banks, gold certificates, and silver certificates. For the consumer, coins played a far larger role than they would in later years, when federally issued paper money became the popular medium of exchange.

Even with more money in circulation, however, the system's weaknesses showed — and glaringly so in 1907, when a fiscal crisis in New York triggered by stock market troubles that shriveled available credit almost brought Wall Street to its knees. From that near calamity came a federal commission that scrutinized money and currency systems in this country and abroad. That commission would serve as the impetus for the Federal Reserve Act, the legislation that created the basic banking system we know today; this system would enable a reserve-poor banking industry to draw upon government-controlled reserves, not those pooled at will by banks themselves.

For too long, reformers argued, the nation's banks had relied on a pyramid of overlapping and often illusory reserves pledged by smaller banks to larger ones. The largest banks, particularly in New York, frequently loaned some of these reserves to stock speculators, in a pattern of call loans that could precipitate panic if banks started calling in the credits, and stocks bought chiefly on collateral had to be dumped quickly, as happened in 1907.

The public frequently held the banks at fault for the tightness of credit and a system that appeared too often to rely on powerful banks bailing out their lesser brethren. But historian Paul Trescott argued that limp capital investment, speculation, and commodity weaknesses also played a role; the banking system at the eve of the Feder-

al Reserve Act, he said, "was simply one unstable element among a considerable number."

No Rush to National Banks

The National Currency Act — its name was changed in 1874 to the National Bank Act — failed to spur the immediate rush to charter national banks that its framers had intended. Many state-chartered banks, with names they had carried for years, cared little for the idea of becoming "Second National," "Third National," or the like. And the New York Clearing House at first refused to admit national banks, considering them an evolution of the "wildcat banks" that had proved so unstable before the Civil War.

National charters, moreover, gave banks no initial financial incentive to join the national system: Notes issued by national banks in exchange for deposits were redeemed in the same way as notes issued by other banks that had no government backing. This situation was corrected in 1865, however, when a bill was enacted imposing a tax of 10% on the notes of all state banks paid out after July 1, 1866.

The tax had its desired effect. On Oct. 31, 1864, there were 453 national banks. A year later, the number had more than doubled, to 1,014, and deposits had tripled, rising from $79 million to $243 million. By July 1, 1866, the ranks of national banks had reached 1,634.

While the federal umbrella and the tax on state-chartered bank notes lured many banks to the national system, the growth of state and private banks attested to a widespread wish for fewer regulations and less-stringent capital requirements. By 1871, the percentage of deposits in state and private banks, as a percentage of all commercial bank deposits, had risen to 50%, from 40% in 1867.

Still, in the eyes of many, the currency reform of the National Banking Act was its biggest selling point. The notion of a standardized currency, be it in the form of greenbacks or national bank notes, offered the promise of money redeemable at par, or face value, anywhere in the country — a far cry from the prewar days when bank notes, sometimes fraudulent, were frequently redeemed at steep discounts and often in distant areas where the issuing bank's reputation could not be easily checked.

To Jay Gould, the financier who built up huge railroad holdings (he owed $20 million to banks by 1884, largely for rail borrowings), the federal banking system combined "the unity of action and general control, and the uniformity of currency — which were the best features of the [earlier] United States Bank — with the diffusion of issue and freedom in local management which characterize the state system."

Limiting Currency

A key element in the plan for setting up the national banking system was the notion of limiting the amount of currency in circulation. No national bank was allowed to issue notes exceeding its amount in capital stock, and each was required to hold bonds representing at least a third of its capital. The aggregate amount of national bank notes in circulation was set at $300 million. Meanwhile, the amount of "legal tender" notes, or greenbacks, was frozen at $356 million in 1868.

This limitation was a favorite idea of Eastern conservatives, who regarded increased circulation as an invitation to speculators to bet on inflation driving up the price of goods. But because banks in the East, which held the bulk of the nation's population and influence, appeared likely to take a disproportionate share of the $300 million circulation, Congress in 1865 amended the aggregate circulation regulations to allow just half to be allotted on the basis of representative population.

Still, by 1870, banks in the West and South complained that they were not getting their fair share. That year, a correcting law permitted states without a due proportion to draw from an amended aggregate that was increased by $54 million; states with more than their allotment were subject to a withdrawal of up to $25 million of that allotment. However, the South remained badly underrepresented in the ranks of national banks: Fewer than 100 of the 1,600 or so in 1870 were in the South, and there were none in Florida or Mississippi.

Reconstruction brought problems that reverberated beyond the South. The Panic of 1873, which started in New York, engendered a depression that lasted, according to some accounts, until 1879.

This panic set a pattern that was to be followed in subsequent crises. A seasonal crunch developed each fall when farmers sought payment for their crops in currency. But this currency wasn't on hand. During the spring and summer, farm banks would have sent the money to larger banks that would pay interest. These large banks, however, turned around and loaned this money to speculators and financial houses and were unable to give back to farm banks all the money they had taken.

The result was a tightness in the system that sometimes reached ossification, particularly when the stock market was falling and banks were hurriedly calling in loans.

Panic of 1873

The 1873 panic began in New York in September with several bank failures. A run on the larger banks by their smaller brethren began in the middle of the month, and the stock market began bleeding so heavily that it was closed for 10 days. A general suspension in the banking system was instituted and lasted more than a month, beginning with a halt to payments on checks calling for large amounts of legal tender. More than 5,000 companies failed in 1873, and close to 6,000 went under in 1874, many because credit they needed to ride out the economic slump was unavailable.

As would be the case in later crises, loan certificates issued by bank clearing houses were used to settle banks' demands on each other. At first, $10 million in certificates was issued; a few days later, another $20 million was issued, buttressing the system and enabling creditor banks to meet their obligations.

About this time, legislation was being drafted for a return to specie payment — payment in gold coin on demand. Specie payment had been suspended in 1861 by banks hoarding their reserves in fear of wartime instability, sending the price of gold skyrocketing and adding greatly to the cost of the Civil War. In 1874, Congress passed a bill that would have increased the amount of currency in circulation, but President Ulysses S. Grant vetoed it on the grounds that it would have delayed the date of currency convertibility to coin.

The Resumption Act, adopted in January 1875, set Jan. 1, 1879, as the date for resumption of specie payments. A victory for fiscal conservatives who sought to cap the amount of currency in circulation, the act did offer an olive branch to monetary expansionists. As historian Charles F. Dunbar noted, the act "fortunately swept away all the provisions limiting and apportioning the aggregate amount of bank notes to be authorized, as well as those calling for the withdrawal and redistribution of bank notes already authorized." With the fetters removed, in other words, the banking system was no longer chained to a system that constrained growth by preventing banks in a boom area from exceeding their allotment of authorized notes.

Throughout the 1870s, agitation had been building for the government to be the sole issuer of money. The Greenback Party, which met in Indianapolis in 1876, pushed for the retirement of national bank notes; it believed that government minting would surely increase the amount of money in public hands; because the availability of more money would decrease its overall value and bring inflation, crop prices would rise. As it was, crop prices were generally falling through the decade.

Natty bankers in 1908

Photo: Norstar Bank of Long Island

The Greenbackers made little impact on national policy, but the resumption of specie payment did bring a significant flow of gold back to the United States. With that, the lifting of the ceiling on national bank notes, and instructions for the government to build its gold reserve, the amount of currency in circulation did rise, and the depressed economy revived somewhat.

Financial Boom; Farm Bust

The last part of the century was a study in contrasts — a general boom in the financial markets, with financiers amassing titanic fortunes, but difficult times on the farm. Crop prices actually declined through much of the period, because the availability of crops continued to mount and an absence of inflation kept prices from rising. In 1886, prices were 60% below their 1864 wartime levels, and they dropped another 20% by 1896. Wheat, which sold for $3 a bushel in 1866, slid to $1 in 1884 and 56 cents in 1896.

But the rush to own land brought enormous growth to rural America, despite the depressed prices. Farm banks sprang up everywhere to provide capital to those tilling the land.

The national banking system got a shot in the arm in 1882, when a law extending the charter of national banks for 20 more years provided a change that prompted more banks to opt for the federal charter. The proportion of their capital that national banks were required to keep on reserve was reduced from one-third to one-quarter if the bank had less than $150,000 in capital.

Still, many states had much lower capital requirements — some only $10,000 for a similar-sized bank — and the dual banking system continued to grow, separately and apart. National banks' lending limits still were restricted to a function of their legal reserves, held in gold and coins, notes, and certificates; state laws were more forgiving.

In 1882, there were 2,239 national banks, and 704 state-chartered institutions. By 1900, however, state charters had zoomed to 5,000, while the number of national banks had grown to just 3,731.

Foreign banks still handled almost all credit and financing for U.S. banks engaged in business abroad. Many domestic banks, in fact, had one principal form of lending: short-term IOUs from merchants or middlemen holding goods. Banks discounted these IOUs, buying them from merchants at less than face value to account for interest that would be paid to the tradesmen, and considered them safe, short-term, and liquid.

Bank supervision was tightening. Only five states had examined banks regularly in 1863, and New York didn't do so until 1884. But by 1895, there were 15 state banking departments. Yet examiners were poorly paid and often poorly trained, and to save expenses, they often took regular routes that brought them to the same series of banks during one trip — giving banks toward the end of the line time to prepare for their arrival.

The shortcomings of many examinations were summed up by a banker from Ironton, Ohio, who told the American Bankers Association convention in 1887: "I found examiners to be gentlemen of high character, yet they have one great fault. They are too fast. One might think that . . . the Furies were driving them on, on, ON without rest."

Crisis of 1884

A crisis in 1884 started, according to some accounts, when public fears that specie payments would start being made in silver and not gold prompted large-scale withdrawals. New York, again, was where the crisis hit hardest, and historian Dunbar said that fraud played a part. The failure of Marine National Bank on May 6 that year, for instance, came "under circumstances of extraordinary dishonor," he wrote, and Second National Bank revealed a week later "an immense defalcation by its president."

The string of failures lasted a few weeks and claimed 11 national banks and 100 banks, several of them good-sized private institutions.

But this crisis was hardly the stuff to still expansion. In the 1880s, railroad lines began stretching everywhere, and the fortunes of their owners swelled. Edward Harriman, Cornelius Vanderbilt, and Jay Gould were the chief railroad moguls, and Andrew Carnegie and Henry Frick, among others, were making heaps of money forging the steel that the railroads quickly

Continued on Page 28

Continued from Page 26

devoured. Not surprisingly, the bonds between banking and the railroads were often strong: a study in the late 1880s found that 69 of 100 prominent railroad capitalists in New England were officers or directors of local banks.

Growth in the national banking system slowed sharply in 1885-90, when only 138 national banks were chartered. But state-chartered banks grew like topsy, often because prominent merchants, dissatisfied borrowers, or immigrant groups wanted to form their own banks.

"Because new banks could be started easily, and because banking regulations were relatively mild in many areas, the banking system was highly sensitive and responsive to evolving credit needs," said historian Trescott.

Hard times in the Farm Belt brought continuing agitation for the minting of silver as a means of increasing the money supply and boosting prices. William Jennings Bryan, the spellbinding orator, rose to prominence through his impassioned pleas for silver. And the government responded in part, beginning the issue of silver-backed certificates in 1878 and continuing them until 1890, when they were replaced with Treasury notes based on silver bullion.

The scarcity of paper money was largely brought on by a major shrinkage in national bank note circulation. With U.S. bonds selling above par in the 1880s, and national notes selling for only 90% of par, many of the national notes were withdrawn. Moreover, the government was still keeping a lid on the amount of greenbacks in use.

National bank note circulation reached its highest point, $359 million, in 1882. By 1891, that total had shrunk by more than half, to $168 million, out of a total monetary circulation of $800 million to $900 million.

Trouble in '90, '93

Another crisis flared in the fall of 1890, again brought on by low prices, speculation, and inadequate reserves. Once again, pooled loan certificates were used in New York to stabilize the situation. Historian Dunbar wrote that "it appears [that] the confidence of the public is best secured by showing that the natural system is for a time suspended by something not unlike a vast consolidation."

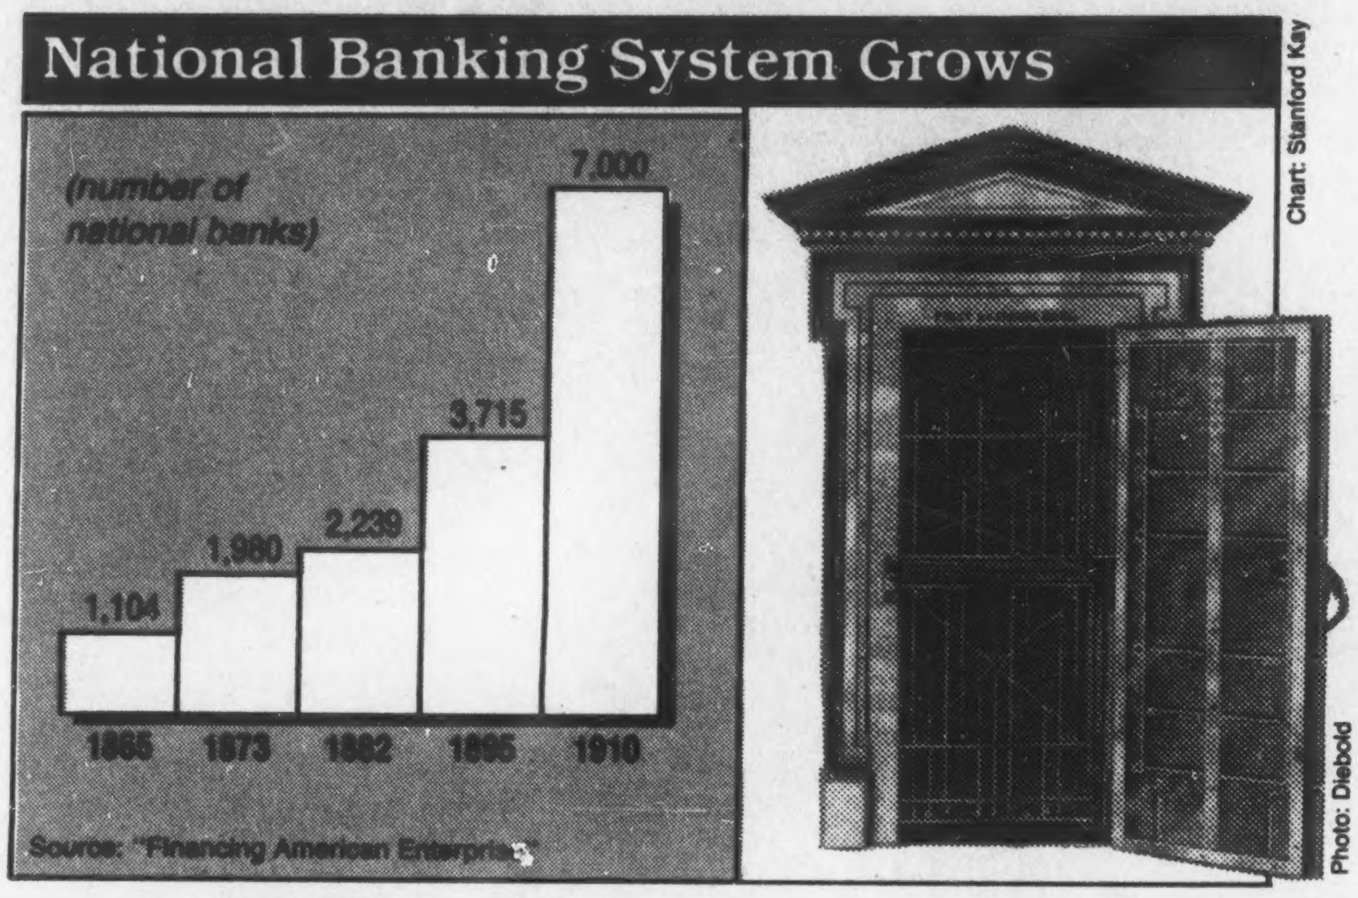
Three years later, in 1893, a more serious panic hit. Unlike most of the previous ones, this one struck hardest not in New York but in the South and West, where farm prices were still sliding. Of the 360 banks that failed, 343 were located south or west of the Potomac. Once again, clearing house loan certificates were used to quell the crisis.

The *American Banker* deemed it "a money panic signified by universal shrinkage of deposits. . . . Unable to realize cash on the best of securities because cash and not collateral is in general demand — is, in fact, being hoarded everywhere — the soundest institutions are compelled to suspend."

In an editorial, the newspaper fretted about the government insistence on unrestricted redemption from the Treasury in gold. If banks held the gold, the newspaper said, "its outward flow would be restrained somewhat or rendered harmless by the operations of certain powers which lie wholly in the banks."

The editorial went on to argue that "since the bulk of our business operations are founded upon credit, confidence in the future is more essential than the mere redemption of bills in gold; but if this confidence is sustained only because of gold payments, we cannot see any way out of the present situation." It was an old, familiar story: Even though the government was authorized to redeem bills in silver, officials feared that doing so would create a panic by depositors spreading the word that the government would no longer redeem in gold.

National Banking System Grows



Source: "Financing American Enterprise"

Chart: Stanford Kay

Photo: Diebold

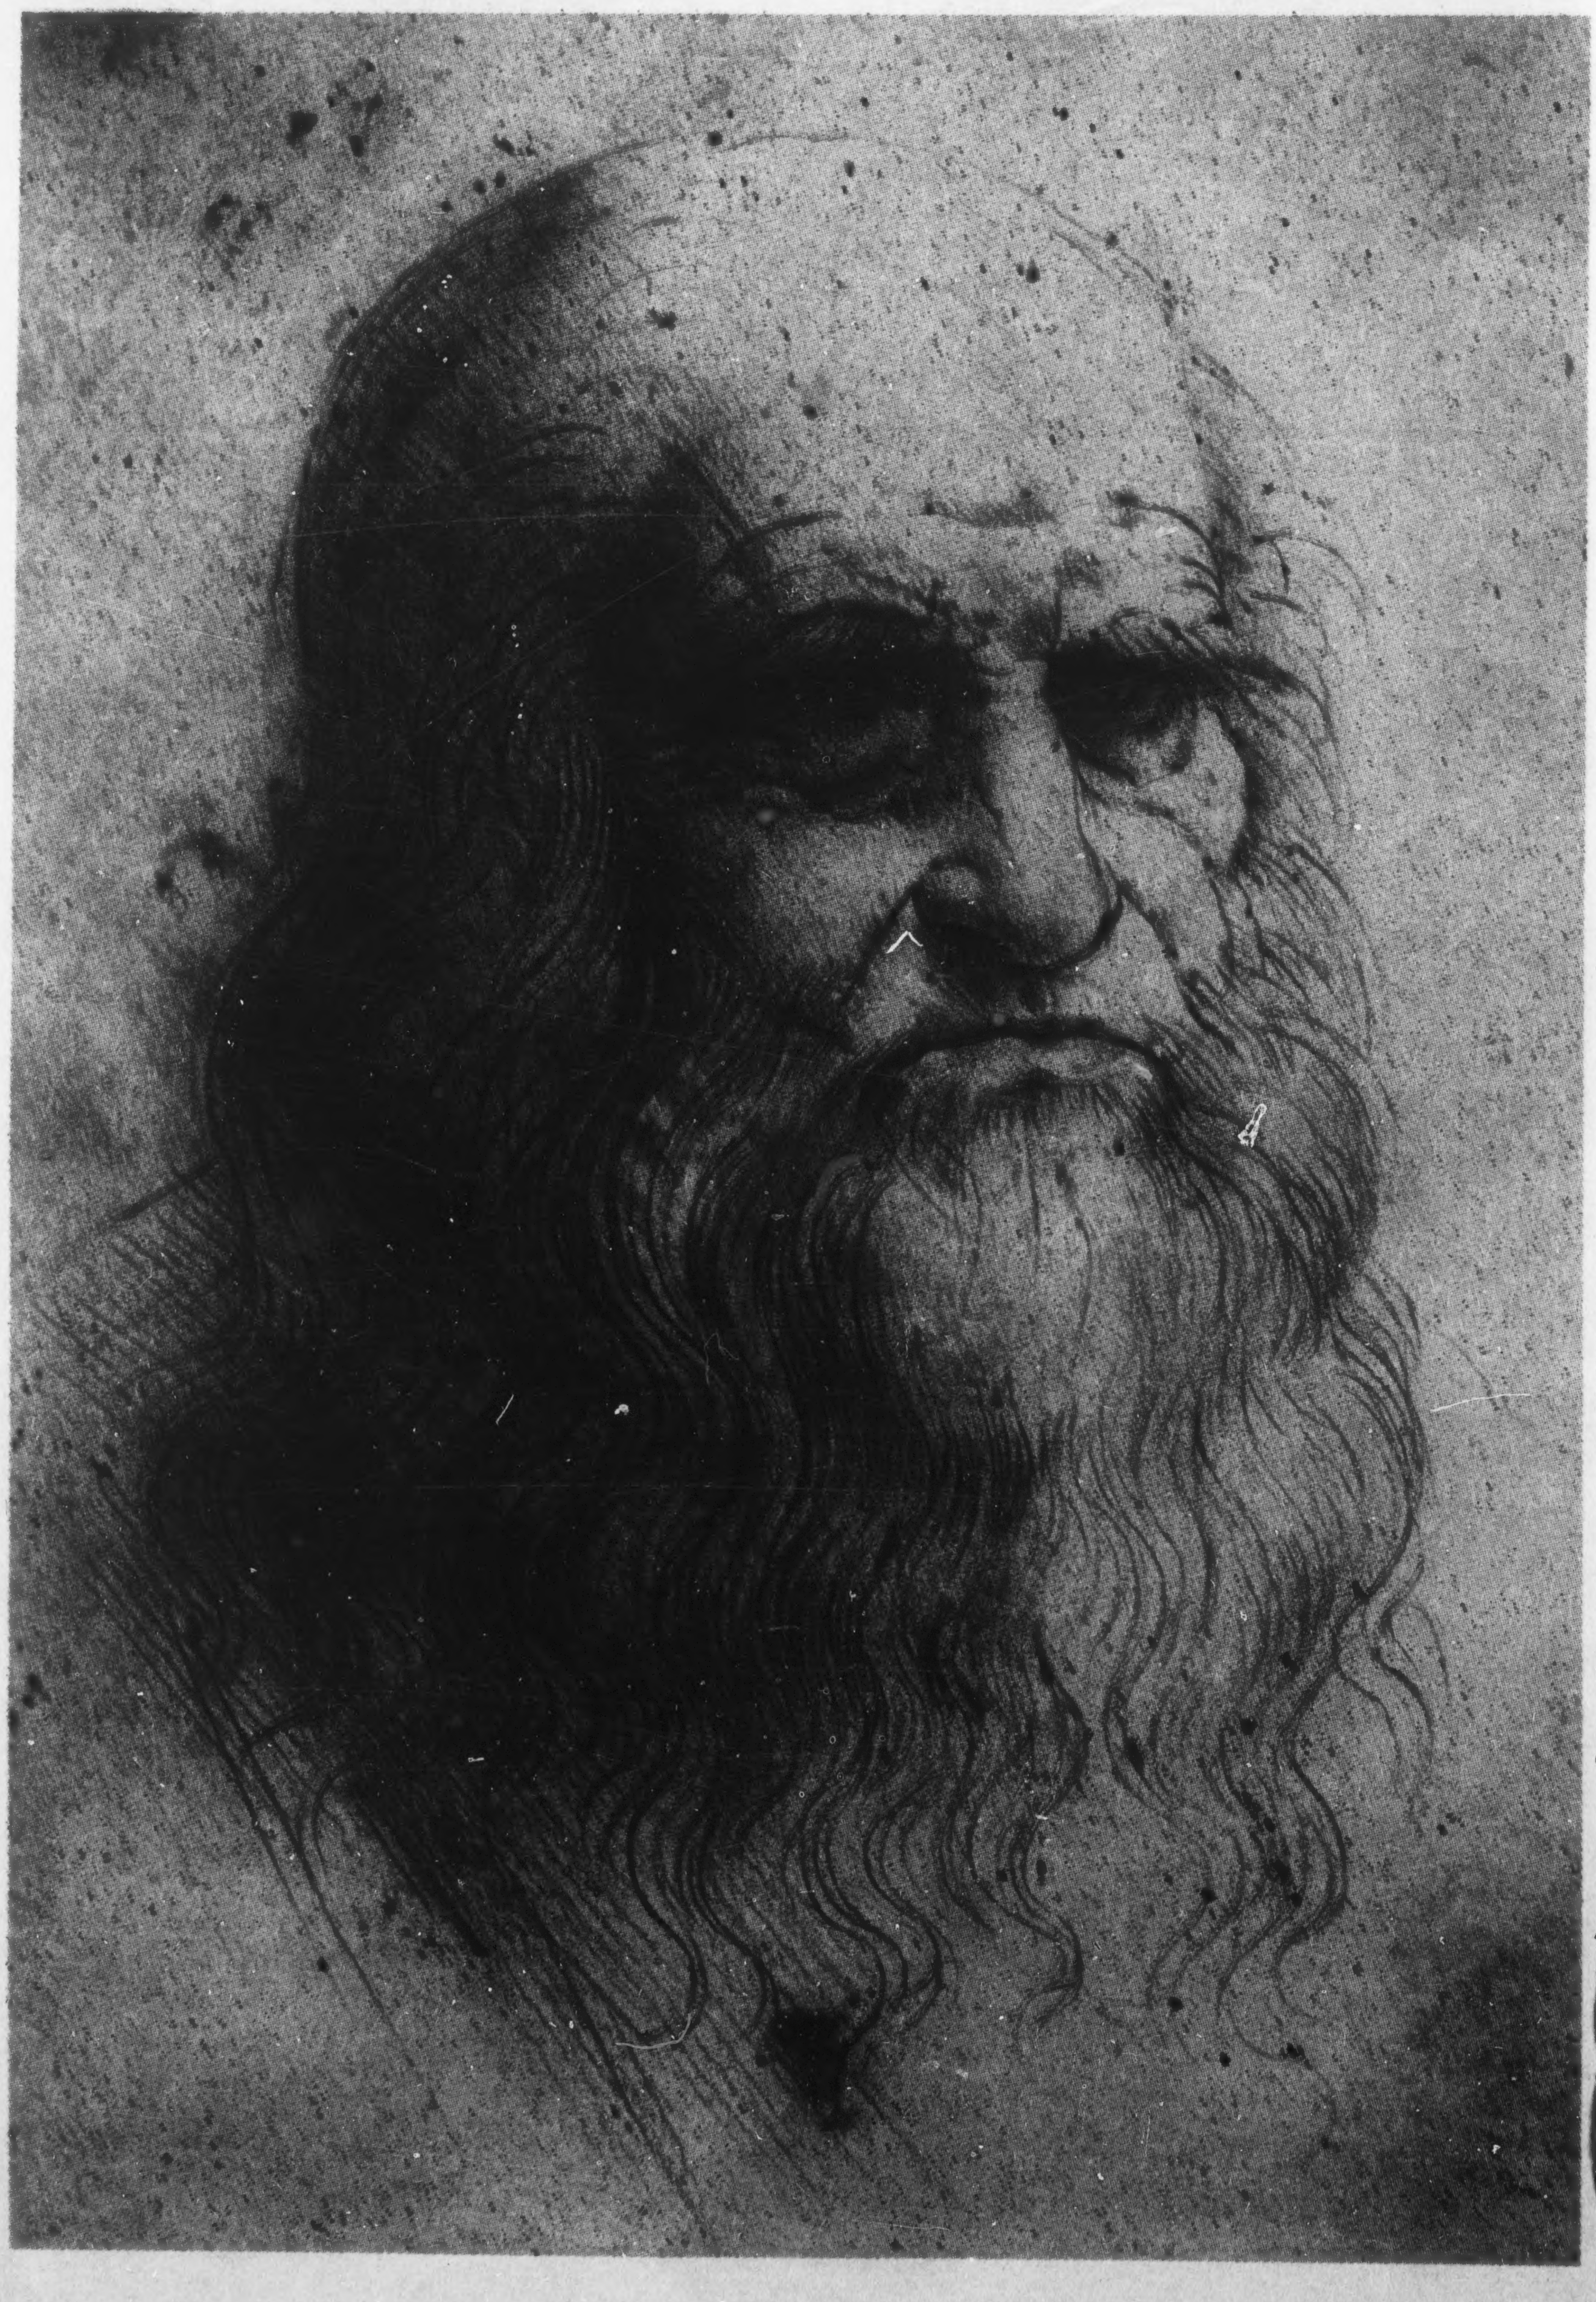
Throughout this period, individual deposits continued to grow, spurred by the extension of banking services to urban dwellers. By 1881, for instance, more than 90% of the total receipts of banks were in the form of checks, drafts, and bills. Checks were viewed as more convenient than bank notes for large transactions, and bank note use continued to dwindle in the biggest cities.

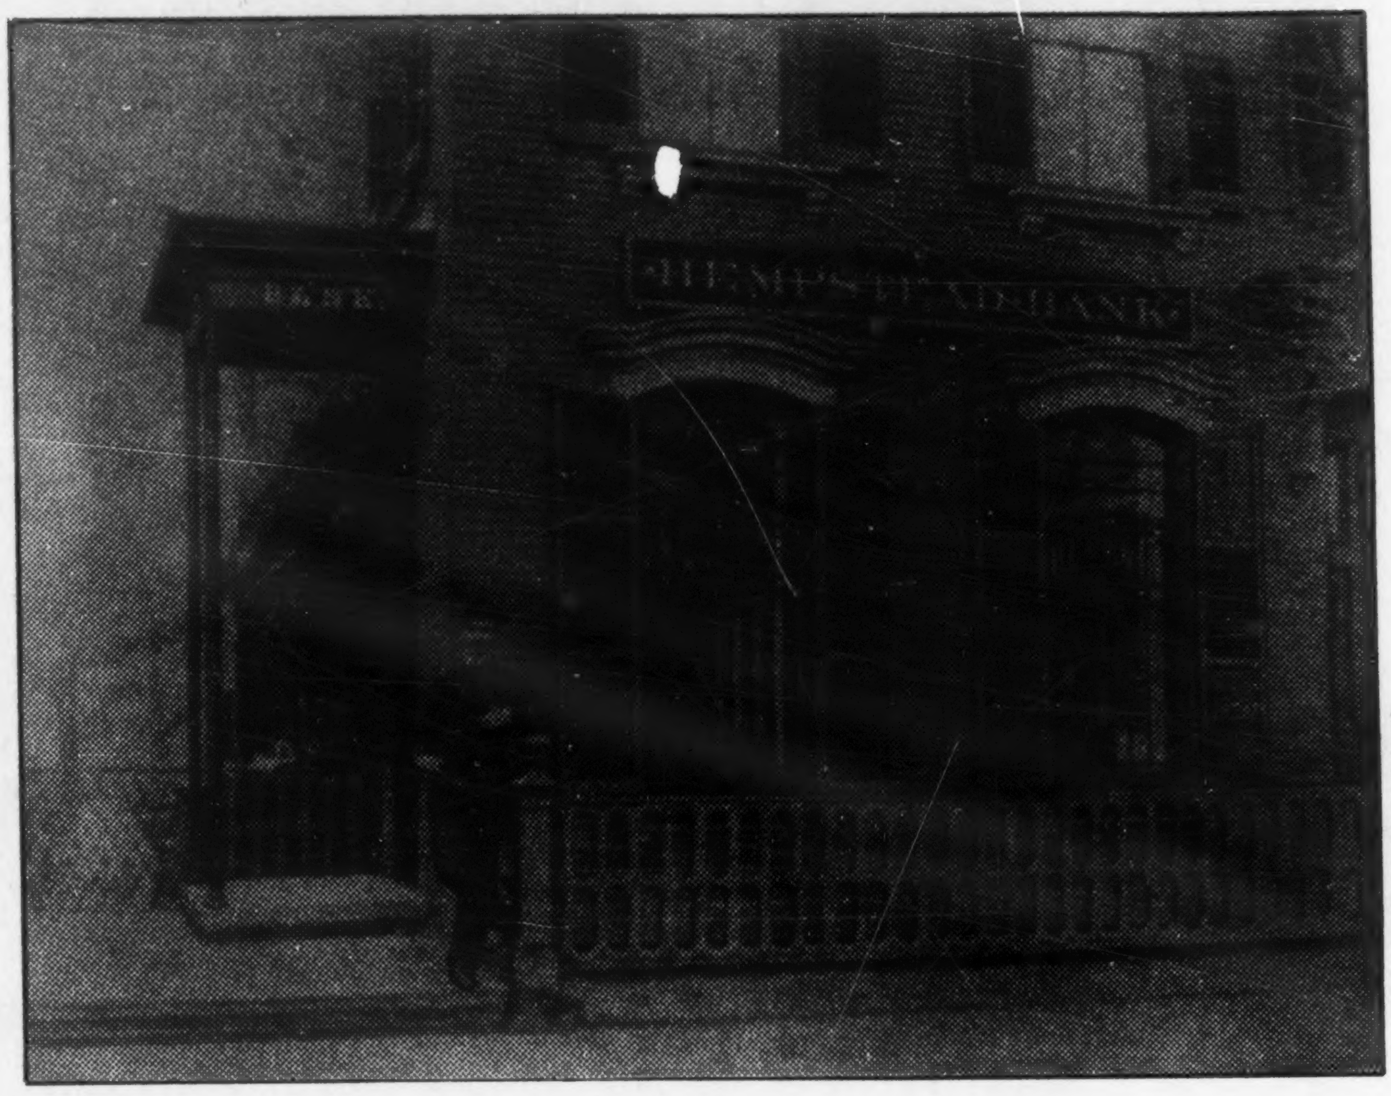
Growth of Trust Companies

Trust companies grew rapidly, especially in the financial centers. While trust companies could not issue money, they "adjusted themselves to meet the complex demands of business as it increased and ramified," noted historian Henry Wysham Lanier. They became invaluable to the well heeled, for they could perform all the functions that an individual, estate, or corporation needed, from acting as a guardian to safeguarding securities to preparing a will or reorganizing a railroad.

The trust companies served the growing web of investors and brokerages dealing in the stock market, then dominated by railroad and steel issues. A host of names came to prominence — Girard Trust Co. in Philadelphia, Rhode Island Hospital Trust Co., Illinois Trust & Savings. But most banks still catered to local enterprises — stores, farms, mills, and factories — that formed their basic borrowing populations.

By 1896, spurred in part by the panic of three years earlier, agitation for silver had reached its peak. The Demo-





Farmers, merchants, and artisans started this Long Island bank in 1887.

Photo: Norstar Bank of Long Island

cratic Party nominated William Jennings Bryan as its presidential standard-bearer. But the "cross of gold" that Bryan bemoaned didn't weigh heavily enough, and the Republican candidate, William McKinley, captured the presidency.

Coincidentally, gold exports from Africa began coming in heavily that year, and crop prices began to respond to the increase in the money supply that resulted. In fact, 1896 is generally viewed as the beginning of a heyday in American agriculture that lasted until 1920.

Typical Bank, 100 Years Ago

BANKS TODAY certainly are different from their turn-of-the-century predecessors. Here is a description of the way things were 100 years ago at one major Southern institution:

Employees of the 1890s reported for work each day in rather formal attire, including, for the men, long-tailed coats and stiffly starched shirts with bat-wing collars. Women's hemlines swept the floor. Hats were in vogue for both men and women.

There were no automobiles, of course, so employees and customers alike arrived at the bank by streetcar, by carriage, or on foot.

Inside the bank, lobby furnishings reflected the technology and lifestyle of the era. Overhead ceiling fans rotated slowly, providing some relief from both the heat of summer and smoke from the highly popular cigar. Brass spittoons stood at discreet distances from each other around the room.

The forerunner of the sleek teller counters we know was a wire cage, designed to separate petty cash from the reach of nimble fingers. Tellers — primarily men until well into the 1930s — could enter and exit from a door in the rear.

Although women were allowed to use the main lobby of the bank in those early years, it was felt that many of them would be uncomfortable in such a man's world. For several decades, beginning about 1911, most banking offices maintained a department exclusively for women customers. There they could conduct banking transactions with their own special teller (a man), write business letters, or simply relax.

Turn-of-the-century lighting consisted of "three lamps of 16 candlepower each," according to the archives of one office. Later, 24-watt bulbs hung by a long cord over each desk.

"Bankers' hours," a term that today has little meaning for banks that provide all-day service, does have some historical basis.

In decades past, banks traditionally were open from 9 a.m. to 1 p.m. during the week, and 9 a.m. to noon on Saturday. Flexibility, however, was the order of the day and, as one former bank employee recalls, "If a customer came and knocked on the back door after we'd closed, we'd go open it and he'd come strolling in to make his deposit."

Flexibility was the norm for staff members, too. At the end of the month when statements were due, virtually the entire bank would pitch in, working until 7 or 8 p.m. to prepare and mail the statements. That completed, employees would return to their regular duties — until the end of the month rolled around once more.

OVIA LOAN AN

Leonardo DaVinci was one of the greatest artists of the Italian Renaissance. His portrait *Mona Lisa* and religious scene *The Last Supper* are among the most famous paintings in the history of art. But . . .

look a little further.

A single talent applied to a specific category can be so broadly accepted and universally acclaimed that accomplishments in other areas may get overlooked.

Often we're pleasantly surprised to discover that the same imagination necessary to achieve recognition in one area has so frequently contributed to a wide variety of other successful endeavors.

Leonardo DaVinci is a classic example. It would be easy to acknowledge him only for his profound talent as an artist. His achievements in painting are a convincing argument that DaVinci dedicated his life and energy to the oil canvas.

But when we look a little further we discover Leonardo DaVinci was so much more.

He was among the first astronomers to proclaim that the earth revolves around a stationary sun. Perhaps this same interest in stars and space lead Leonardo to explore the reality of flight.

Some 500 years before the Wright Brothers made their mark in history, DaVinci completed drawings and plans for flying machines. His notebook drawings even reveal the first serious considerations for parachute design.

And as we look a little further, we discover Leonardo DaVinci was a remarkable scientist and prolific inventor. He made significant discoveries and contributions in the fields of medicine, botany, geology and jet propulsion.

Thomas Cook is another classic example of creative versatility. The pioneer in global travel services over a century ago, he also invented the Circular Note, the forerunner of the modern travelers cheque. Today, Thomas Cook Financial Services remains one of the largest issuers of travelers cheques.

But if you look a little further you'll learn that Thomas Cook Financial Services is the source of a unique variety of innovative wholesale services for financial institutions.

Leonardo DaVinci and Thomas Cook are two examples of the valuable knowledge and rich rewards that can be realized when we resist the temptation to take something for granted and take the initiative to look a little further.

Have a closer look at Thomas Cook.

Thomas Cook Financial Services

Premium Services. A unique card enhancement program.
Foreign Money. A complete international bank note service.
International GiftBond. Gift certificates in four currencies.
ChequeMate. A computerized travelers cheque point-of-sale system.
Remit. Worldwide wire transfers and currency drafts.
PostCheque. Travelers cheques by mail for credit cardholders.
Travelers Cheques. Available in 12 currencies.

High-Water Mark for Banking

The period ending about 1913 was, at least in one respect, the high-water mark for American banking. By 1912, 88.2% of private citizens' available funds were held in commercial banks, up from 55.5% in 1867 and 81.3% in 1900. One study concluded that banks never again held such a high percentage of all fiduciaries' funds.

The high water came from many sources. In 1900, three-fourths of all banks were operating in small towns, often cheek-by-jowl with others of similar size. Half of all earning assets of commercial banks were in the form of short-term business loans to small and medium-size firms; long-term business credits, such as corporate bond holdings, were less than a fifth the total of short-term loans.

The small-bank phenomenon continued to blossom in the early years of the new century. In 1900, Congress amended the law to permit national banks to be formed in small towns with only $25,000 in capital, not $50,000, as it had been. But demand for banking services in rural areas played a larger role in the expansion. Oklahoma added an astounding 810 banks in the 1900-1914 period, and North Dakota added 613.

Competition stimulated innovation. Branch banking had been largely denigrated in the late 1800s; it was considered unwieldy, and, perhaps worse, a threat to the pioneer spirit that induced businessmen to form their own banks. Moreover, a network of correspondent banks, which offered services such as check-clearing, asset management, and stock trading to smaller-city cousins, continued to grow, mitigating the appeal of branches.

But the barriers began to erode. An 1898 law permitted branching in five New York counties, and California adopted a branching law in 1908. Chain banking — the development of banks owned by one "chain," or common owner — began to develop, particularly in the Midwest, West, and South.

Commercial paper, which had been in existence as far back as 1860, beckoned to many larger banks in the early 1900s. They began to buy this short-term debt, issued directly by corporations as a means of raising money, in the interest of diversification and liquidity. Much of their money, after all, was still invested in railroad bonds; by 1912, banks held $900 million in railroad paper.

Growth of Credit Analysis

It was in this period that credit analysis, the process of investigating existing and potential borrowers to determine their creditworthiness, became an important adjunct at many larger banks.

Ignoble Managers Corrupted a Noble Notion In the Destruction of a Reconstruction Bank

GREED AND GRAFT — the two Gs that played an outsized role in Reconstruction — figured prominently in post-mortems of the Freedmen's Savings Bank, liquidated in 1874 after nine years of life. Like many Reconstruction-era efforts to help freed slaves, it began with noble aims and noble pronouncements and ended with that nobility in tatters, having been subverted by privateers who saw in government or quasi-government services for blacks a chance to line their own pockets.

The Freedmen's Savings Bank, chartered in March 1865 after Abraham Lincoln signed legislation authorizing its formation, was designed, as its name implied, to provide a place for freed slaves and other blacks to put their savings. Interest of 6% was to be paid on deposits, and principal targeted customers were the former soldiers who had mustered out with cash but had no history of saving or using banks.

Officially chartered as the Freedmen's Savings Bank & Trust Co., it aimed to improve the lot of blacks, according to its statement of purpose, by "fostering habits of thrift and economy, by encouraging them to save their earnings, and thus secure a safe, economic position in society."

Leading the drive for the bank was John W. Alvord, a Congregationalist minister who had traveled with Gen. William T. Sherman's army in the final weeks of the Civil War. Seeing first-hand the difficulties black soldiers experienced with military banks, he envisioned a network of branches across the South that would collect deposits and invest them largely in U.S. government securities. Attesting to its high purpose was a clause affirming that interest on deposits uncollected for two years after the death of a depositor would be set aside for the education of blacks.

From the outset, however, powerful ambiguities swirled around the bank. In the months after the war ended, Alvord himself was attached to the Freedmen's Bureau Educational Department, a government-sponsored entity under Gen. O.O. Howard that aimed to help blacks through education. Branches of the bank tended to be established in the same building where the department had its offices, and bank officials often wore uniforms — and frequently solicited deposits. Yet the bank never had any official ties to the government.

Moreover, Alvord, who was traveling through the South for the Freedmen's Bureau educational arm, apparently represented as an order a recommendation from Gen. Howard that blacks deposit their money with the Freedmen's Savings Bank.

Limits Ignored or Unknown

Another ambiguity centered around the bank's permissible activities. In passing the bill authorizing the bank, Congress intended that it be chartered in — and its activities limited to — the District of Columbia. The charter was made effective for the District, but Alvord and his colleagues never proposed to limit business to Washington; a network of branches across the South was their goal from the outset. Later accounts indicate that the founders either did not know or flaunted the charter's limits.

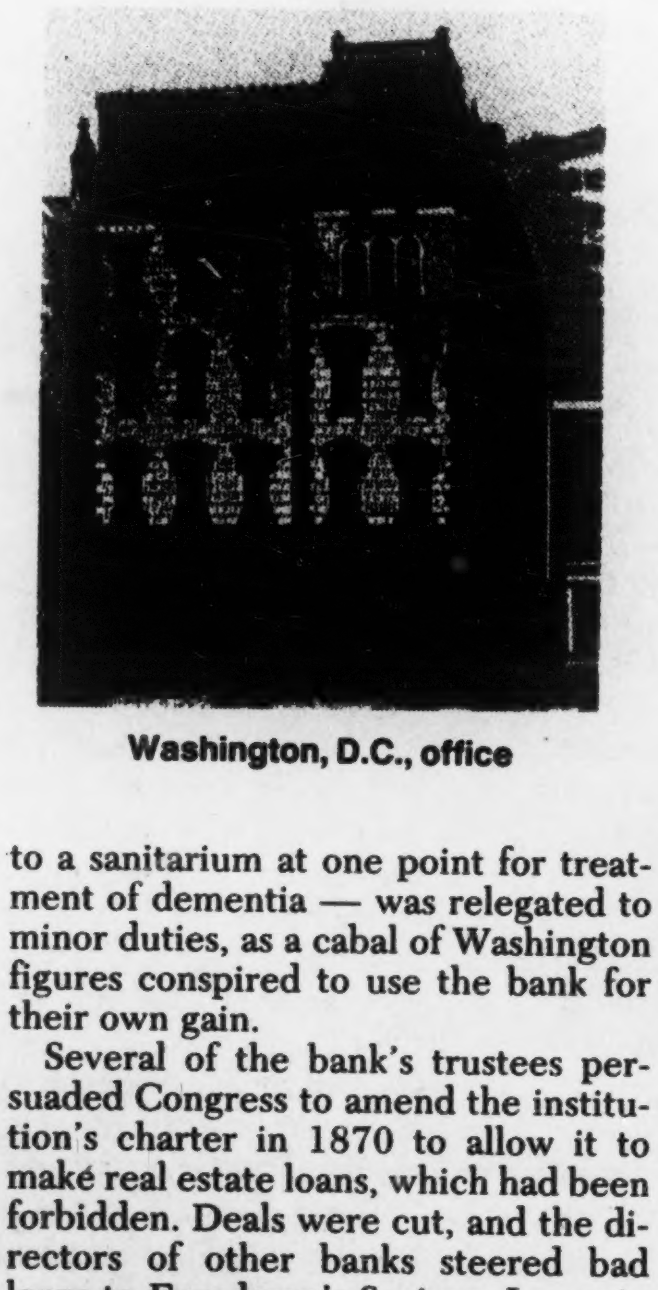
In any event, the Freedmen's Savings Bank set up headquarters in New York City in April 1865 and began accepting deposits. By May 16, a mere $700 had come in. The District of Columbia branch was set up in July, and, thanks to Alvord's efforts, the bank began adding branches in scattered locations around the South.

Military banks in Norfolk, Va., and Beaufort, S.C., were then absorbed, swelling deposits, and the bank had 10 branches by the end of 1865 and 10 more by the end of 1866. From then on, the pattern fluctuated sharply. No branches were opened in 1867, but three were in 1868, one in 1869, and eight in 1870. The addition of two more in 1871-72 gave the system its final total of 34, the vast majority in the Deep South.

Deposits grew apace with the opening of the branches. By the end of 1866, they stood at $305,167, rising to $12.6 million in 1870 and $57 million in 1874. Still, the average deposit was tiny; over the life of the bank, the average in any account at any one time was $50.

Alvord, who began as the Freedmen's Savings Bank's recording secretary, became its president in 1868, and its headquarters were moved from New York to what was described as "a fine building erected especially for it, opposite the United States Treasury."

The move to the capital was to play a large part in the bank's downfall. Alvord, who was aging and apparently somewhat addled — he was committed to a sanitarium at one point for treatment of dementia — was relegated to minor duties, as a cabal of Washington figures conspired to use the bank for their own gain.



Washington, D.C., office

Several of the bank's trustees persuaded Congress to amend the institution's charter in 1870 to allow it to make real estate loans, which had been forbidden. Deals were cut, and the directors of other banks steered bad loans to Freedmen's Savings. Loans in real estate proliferated after the charter change allowed half of all the original provisions for U.S. securities — initially, they represented two-thirds of the bank's portfolio — to be invested in real estate or bonds.

Misplaced Decimal Points

While the headquarters office was robbing the store, the branches were having problems of their own. Most were still merely collecting deposits and paying interest on them, but incompetence and fraud were rampant. Records showed that some entries were improperly recorded, often because decimal places were wrongly positioned; a draft of $31.60, for instance, was recorded as $3,160. Bookkeepers were often poorly qualified, particularly in smaller rural branches.

Regulatory laxity contributed to other problems. Overdrafts were frequently permitted to more prominent borrowers, and central authority was almost nonexistent. Nor were regular inspections carried out.

Corruption apparently became a province of those who would be least suspected of it — the clergy. "The white clergymen who were cashiers proved to be quite unable to withstand the pressure of cash in the vaults," wrote Walter L. Fleming in *The Yale Review* in 1914.

One such cashier, the Rev. Philip Cory of the Atlanta branch, tried to discourage black depositors, an obvious breach of the bank's mission. When he was removed, his black successor found that the Rev. Cory had embezzled $10,000. He was eventually convicted and sentenced to four years in prison; as it turned out, he was the only person connected with Freedmen's Savings ever to be prosecuted.

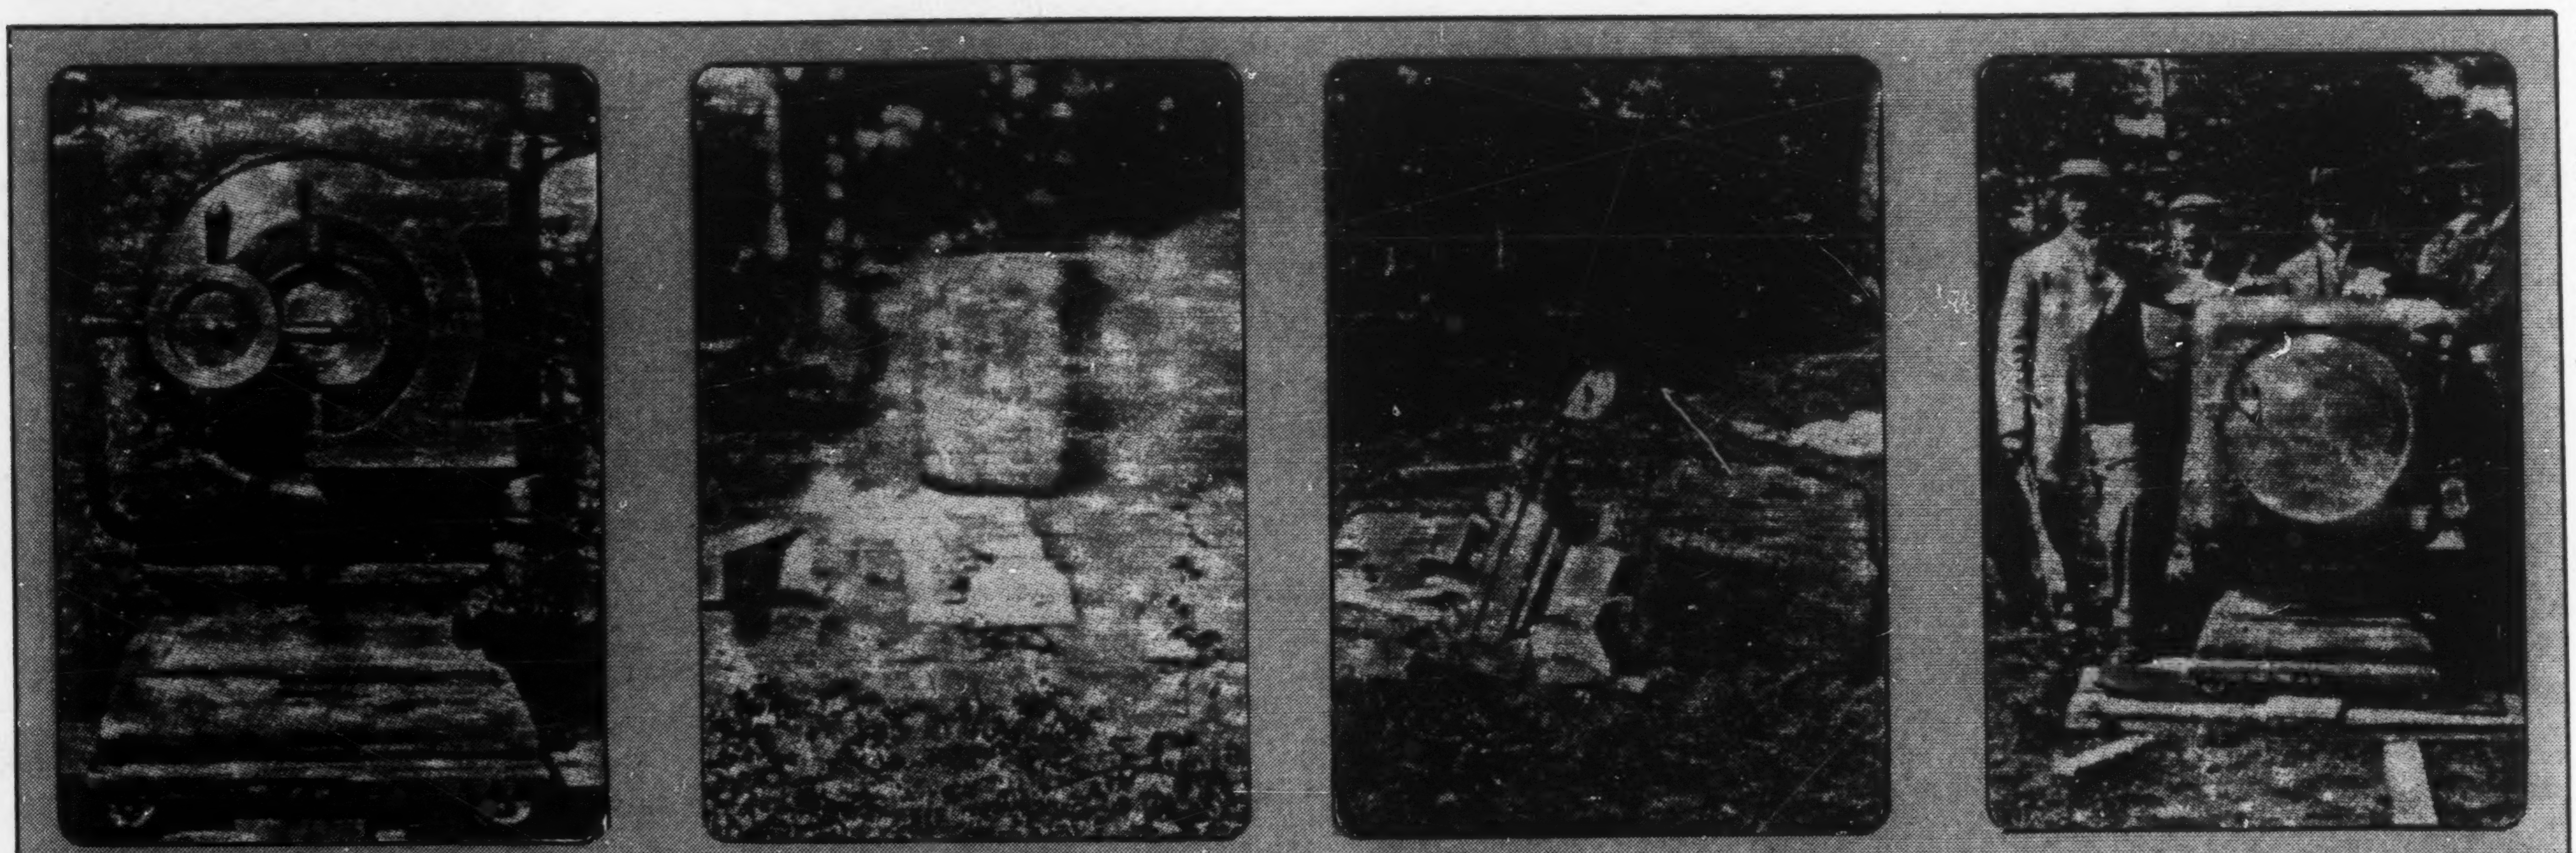
As the real estate market turned down in the early 1870s and the bank's real estate woes mounted, runs began. Three beginning in 1873 took $1.8 million out of the bank in 18 months. Trustees decreed in 1873 that withdrawals could be made only with 60 days' notice; the effect was to dry new deposits to a trickle. The Comptroller of the Currency that year reported serious mismanagement at the bank, and a report in February 1874 showed it had been insolvent for almost a year.

The string was played out slowly. Trustees were still trying to lure deposits, even after they had prudently pulled out their own funds. But Frederick Douglass, the black leader, blew the whistle. Elected president of the bank early in 1874 in an attempt to shore up the bank's credibility, he knew nothing of the insolvency for some time. But his suspicions grew, and by late spring he had gone to Congress to report his worries. After an investigation, officials decided in June to liquidate the bank.

The postscript for Freedmen's Savings was not a happy one. Commissioners were appointed in July 1874 to bring order to the books — losses were put at $280,000 — and to pay dividends to depositors. Three such dividends, all meager, were paid by 1880. A clamor went up from blacks, who pointed to the bank's professed congressional mandate and government connections and argued that Uncle Sam should make them whole.

But it never happened. Despite congressional investigations in 1876 and 1880 that uncovered widespread fraud and mismanagement, and recommendations by several comptrollers in the 1880s and 1890s that the government offer relief to depositors, Congress never responded. A bill for depositor relief did clear the Senate in 1888, but it died in the House, and no more dividends were ever declared.

— ***Jeffrey Marshall***



Field testing of safes in the late 1800s included attempts to blow them up to demonstrate their invulnerability, as Diebold did in this sequence. Bankers chose the safes for testing from a stockpile. Then the safes were transported to nearby farmland where they were blasted with explosives and inspected by the onlookers.

From fewer than 10 such departments in 1899, the credit analysis movement had spread to most major banks by 1911.

"Department store banking," the forerunner of today's "financial supermarkets," emerged as banks diversified to compete more effectively with trust companies, private banks, and savings institutions. Though barred from lending on real estate, commercial banks found ways to sidestep that ban. Frequently, they formed mortgage and trust companies, often in the same building as the bank. By 1913, banks held almost $700 million in farm mortgages, out of a total of $4.7 billion.

Bankers Trust Co., New York, was formed in 1903 as a specific reply by commercial bank opponents of the trust companies, many of which, bankers felt, were operating imprudently. That same year, the New York Clearing House began to demand a 10% reserve from trust companies to use the clearing house services; some trust companies proceeded to drop out of the clearing house network.

But it was another clearing house, in Boston, that provided a processing breakthrough. In 1899-1900, the Boston facility began a uniform clearing procedure for clearing the checks of all New England banks. Remittances would be at par, and any banks that refused to pay at par would be subject to an exchange charge.

The insistence on a standardized payment process enabled the Boston Clearing House to lower clearing charges dramatically — from $1.25 per check to 7 cents within a year, according to one study. The Boston experiment was soon emulated in St. Louis, Kansas City, and Detroit, and eventually by New York, and it later became a model for the Federal Reserve System.

Technology began to improve. Until the late 1890s, almost all entries were made by hand; gradually, however, practical adding machines came into general use, as did typewriters, punched card tabulators, and check-writing equipment.

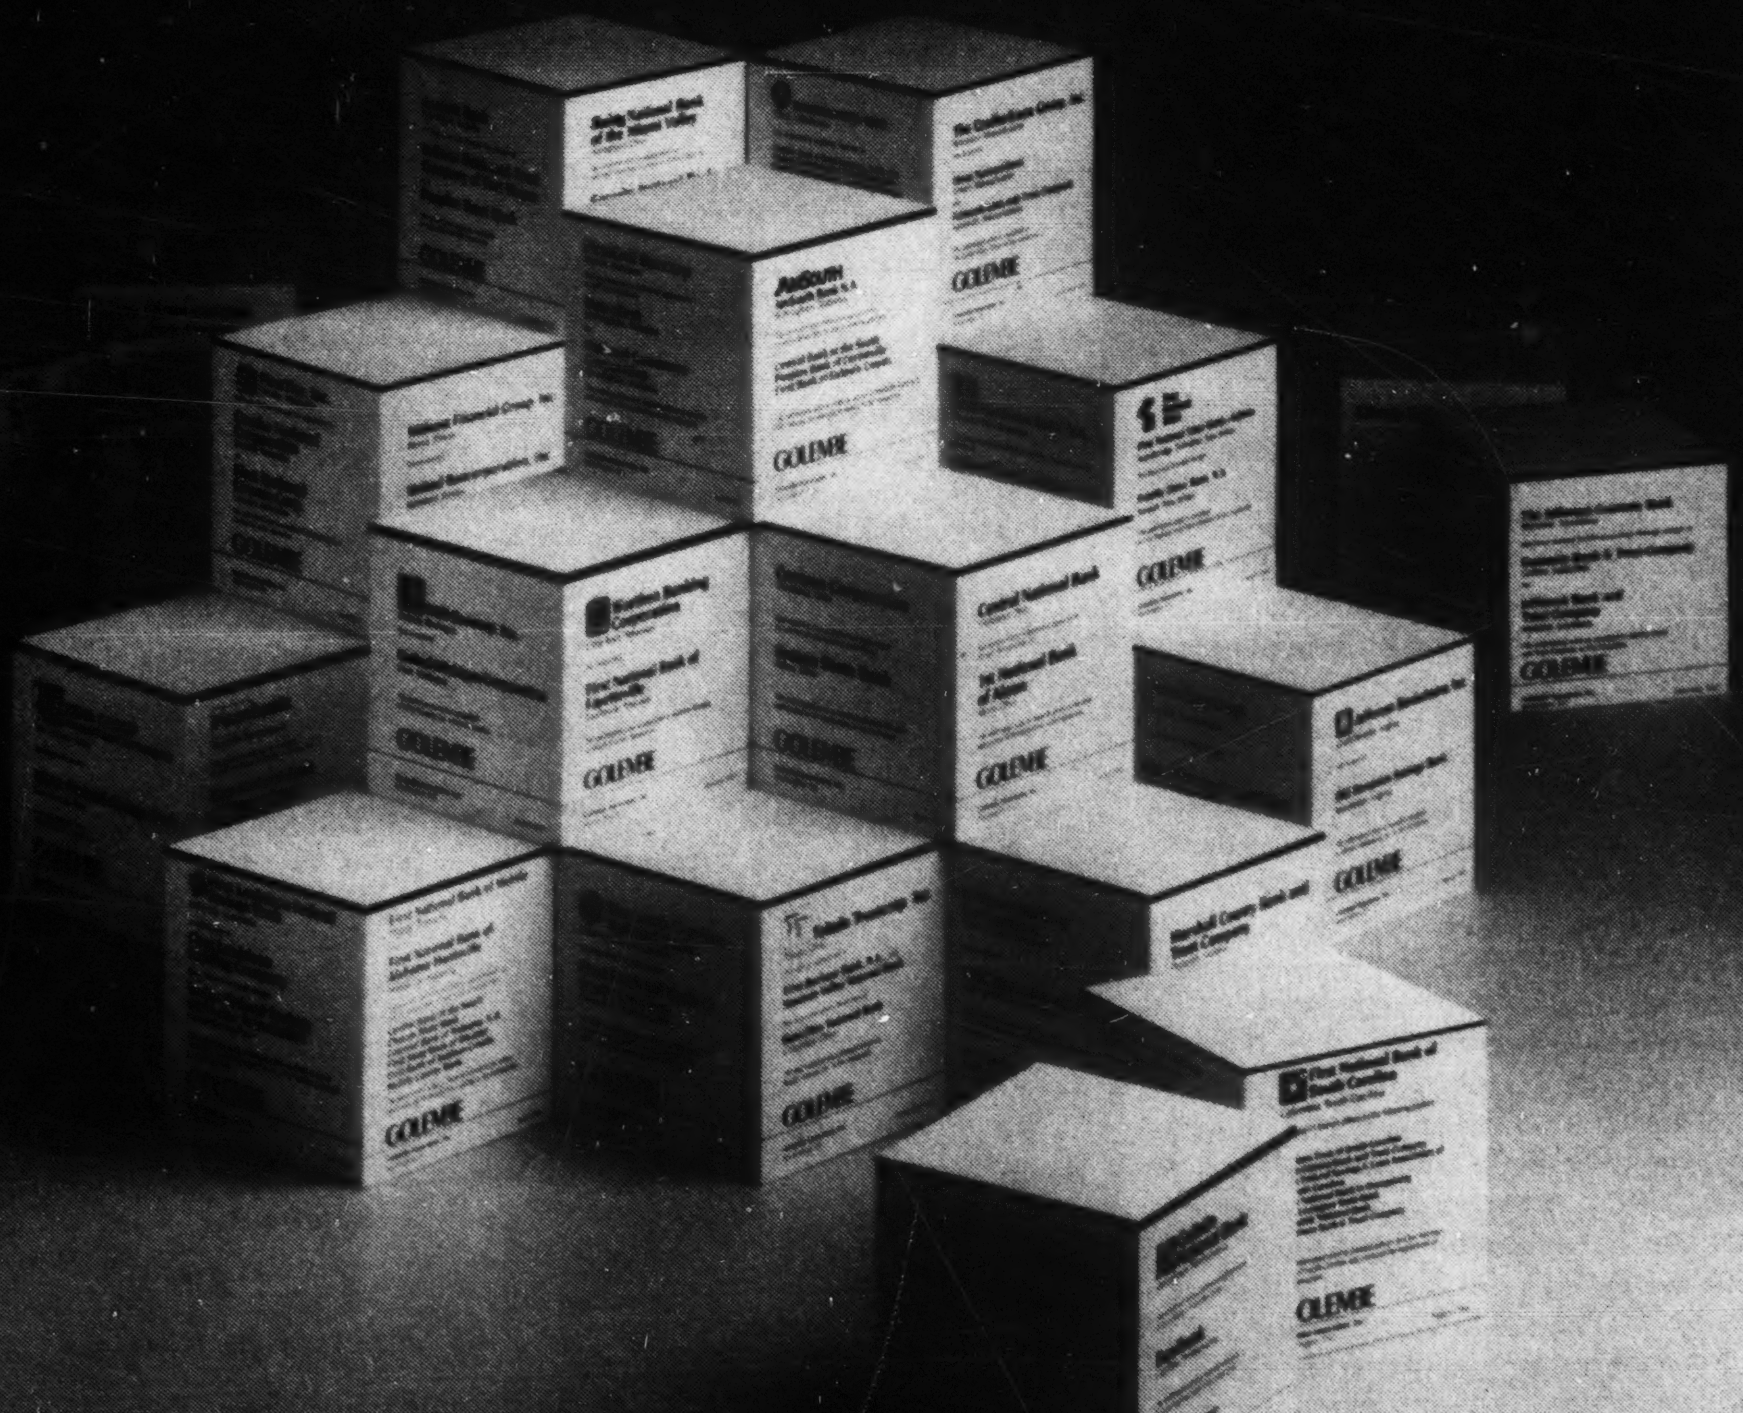
Bank loans helped build railroads.

Golembe Associates does more than deals...



We do

- MANAGEMENT CONSULTING
  STRATEGIC PLANNING
  MARKET RESEARCH
  PAYMENT SYSTEMS
- REGULATORY CONSULTING
  BUSINESS PLANS
  CAPITAL PLANS
  GOVERNMENT AFFAIRS CONSULTING
  CLIENT REPRESENTATION

For almost twenty years, Golembe Associates, Inc. has been providing a wide range of professional consulting services to the financial industry. Pricing and structuring acquisitions, assisting in negotiations on behalf of buyers and sellers, preparing fairness opinions and regulatory applications are among the firm's service offerings. But they are by no means all.

From offices in Washington and Boston, our specialists in strategic planning, organization and structure, and market research assist clients to respond to the rapidly changing environment and to achieve the economic benefits of mergers and acquisitions. We are also well-known for our expertise in the areas of core deposit appraisals and payment systems. And, Golembe Associates maintains a government affairs office which provides current advice on legislative and regulatory developments and represents clients' interest before Congress and its committees.

Our Annual Report contains a full description of the firm's services, clients, and staff. Write to us for a copy or call Greg Golembe in Washington at 202-337-5550 or John Neely in Boston at 617-350-7880.

> **"The number of banks grew at a rate five times that of population in 1863-1913; farm towns, even if mere crossroads in a checkerboard of fields, sprouted banks like spring seedlings."**

Team of horses and a confident farmer attest to importance of agriculture. Farm banks multiplied in late 1880s.

Continued from Previous Page

Bank fees are not a modern-day phenomenon. By the early 1900s, some banks required a minimum checking balance of $100 to $200, and some charged as much as $2 a month in fees. Nor was deposit insurance a product of the 1930s. A crude insurance system began in Oklahoma in 1907, and similar systems started in other Farm Belt states. The forerunners of private insurance systems in Ohio and Maryland that collapsed in 1985, these early deposit insurance schemes were small and poorly capitalized.

Rockefeller Millions in 1907

While banking was becoming increasingly dynamic, currency remained relatively rigid, and liquidity was minimal. Given that situation, the panic of 1907 was not surprising. But it was severe, prompting help from J.P. Morgan and John D. Rockefeller; Rockefeller loaned millions to keep the stock exchange running. One economist called the 1907 crisis "probably the most extensive and prolonged breakdown of the country's credit mechanism since the establishment of the national banking system."

The crisis pointed out in graphic terms just how vulnerable the banking system was to hoarded money. The *American Banker* noted in late October that "many brokers were unable to supply themselves with funds at any rate"; with the demands for cash mounting, mere collateral was scorned.

"One of the trust companies that closed its doors had in its possession live assets amounting to over $50 million, but all of this credit was dead," the *American Banker* wrote. "It could not do the work of a single dollar in the paying teller's cage."

Through the leadership of Morgan, and with a generous dollop of government aid, the crisis passed. But it required 60 clearing houses to issue pooled loan certificates worth $256 million, 2.5 times the volume of those issued in 1893.

The next year, the Aldrich-Vreeland Act established the National Monetary Commission to study the country's monetary system and make recommendations for reform. It also authorized a national currency association of at least 10 national banks to make note issues in emergencies, and eliminated the reserve requirement for federal deposits.

Woodrow Wilson's election in 1912 was to become a major force for currency reform, which Wilson supported. By the summer of 1913, led by Rep. Carter Glass of Virginia, the movement for a government reserve system began gathering steam as part of a larger currency bill.

Legislation was drafted calling for a reserve system comprised of locally controlled reserve banks that could put high-powered government money to work in situations where banks had previously had to step in. These reserve banks would pay a 6% dividend and do for banks what banks did for their customers — hold surplus funds, handle deposits, and offer remittance facilities.

Unlike the First and Second Banks of the United States, the reserve banks would not deal directly with the public — thus avoiding the apparent impropriety of the government becoming engaged in a profit-making venture.

Compromise on 12 Banks

As the legislation began to take shape, a compromise emerged. Some had argued for reserve banks in each state, but most believed that would be too unwieldy. And creating just three or four, others felt, would take away some of the local control the system was intended to provide. So a compromise was reached on 12 district banks.

Not everyone was happy with the plan. Rep. George McClean of Connecticut complained that "the present haste to organize the banking system of this country is purely political. There is not one man in ten thousand who cares anything about the subject . . . and his ignorance in this regard is as natural and excusable as his ignorance of the Chinese language."

But the legislation passed by healthy margins in both houses. In addition to providing an unprecedented level of reserves, the Federal Reserve Act gave national banks the right to make real estate loans and exercise trust powers. And by establishing a career system for salaried examiners — providing a path for promotion and expanded responsibilities — it attracted better people and gave the banking system more effective supervision.

The *American Banker* championed the plan, saying in March that the prospect that it would be passed was "almost too good to be true." When it was eventually signed, the *American Banker* hailed it as "the second great revolution in the financial history of the United States," creating "a new system that is at once stable and flexible, and thus removes all the evils from which the country has suffered during the past 40 years." ■

How a 'One-Man Federal Reserve' Rescued The Financial Markets in the Crisis of 1907

RETURNING TO HIS palatial home on New York's Madison Avenue on Sunday, Oct. 20, 1907, J.P. Morgan soon discovered that the financial crisis that had been festering before his departure earlier that month for the Episcopal Triennial in Richmond, Va., had become worse. United Copper stock had essentially collapsed in frenetic trading the previous Friday, and rumors of overextension by the Knickerbocker Trust Co., a big New York institution, were giving Wall Street a bad case of the jitters.

A tall, stout man of 70 with a huge nose that flushed red when he was ill or angry, John Pierpont Morgan had long been a titan. His firm, J.P. Morgan & Co., founded 12 years earlier, was a major force on Wall Street, and Morgan himself had amassed an immense fortune. Like other hugely wealthy men of the Edwardian era, Mr. Morgan — a staunch Anglophile — lived lavishly, buying estates in Britain, yachts, and European art treasures for his mansion.

Mr. Morgan, who had fashioned his empire by financing the industrialization of America, saw the deteriorating financial markets of that autumn as a threat to everything he had built. For his role in the next few days, some would brand him an opportunist, others a patriot. But whatever his motives, Mr. Morgan is credited with personally saving New York's trust companies and Wall Street's major brokerage houses from going under. In the days before the Federal Reserve System, he acted, said historian Frederick Lewis Allen, "like a one-man Federal Reserve."

Mr. Morgan's influence was widely recognized. On Aug. 24, when a bearish market was growing more restive and traders increasingly perturbed, the *American Banker* noted that "the arrival of J.P. Morgan from his trip to Europe sooner than has been expected gave the hope that interests with which he was connected would receive assistance from this banker and financier."

But an upturn in September offered "a more cheerful tone," *American Banker* reported Sept. 14. Two weeks later, the newspaper deemed the financial markets "dull and featureless but essentially cheerful" — presumably on the premise that anything short of catastrophe offered some hope. A month later, however, any lingering optimism had evaporated.

Summoned to Red Room

On Monday, Oct. 21, Mr. Morgan summoned several leading New York bank presidents to the Red Room of his library. Florentine masterpieces from the Renaissance served as backdrop for the likes of George Baker of First National and James Stillman of National City as they discussed the heavy withdrawals that started at the Trust Company of America in New York and were spreading to other banks in other cities and to brokerages as well. Mr. Morgan and the bank executives broached the idea of some collective action.

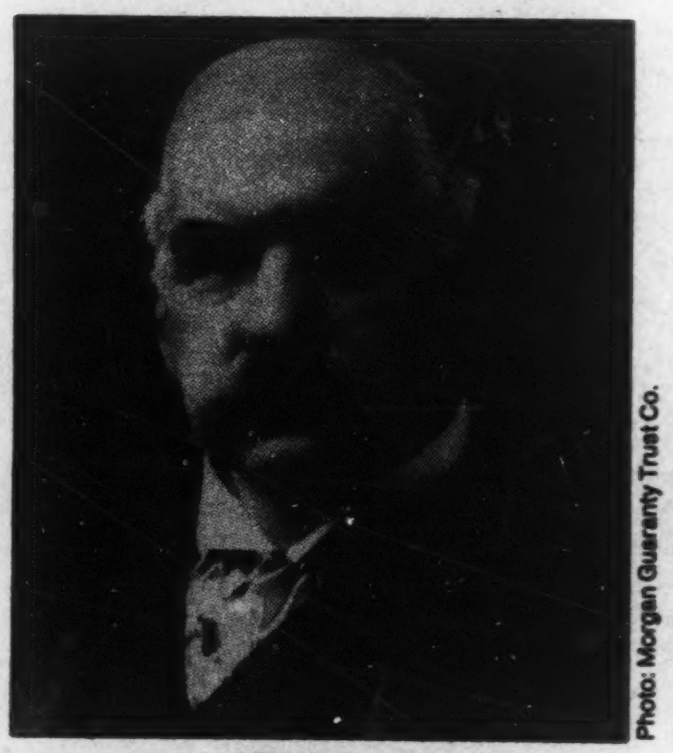

Photo: Morgan Guaranty Trust Co.

J.P. Morgan

Mr. Morgan monitored events from his office at 23 Wall Street through that day and the next. The Knickerbocker Trust Co., with about $40 million in assets, closed its doors at 12:30 Tuesday, sparking rumors that besides Trust Company of America, other trust companies — subject to fewer regulations than banks and closely tied to stock trading — were also on thin ice.

On Wednesday, Oct. 23, Mr. Morgan had decided to form a salvage fund to bolster the troubled institutions and prevent a wider run. His firm and the two big banks, First National and National City, would be the main contributors to a fund of pooled clearing house certificates, instruments that had been used to stem runs during earlier financial crises.

Then, Mr. Morgan called Treasury Secretary George B. Cortelyou, already in New York, to go over the pool plan and to ask for government help. Mr. Cortelyou told him that the problems besetting Trust Company of America were outside the government's jurisdiction, but he offered a promise of government help "through the national banks and private financial institutions, when they are united."

Meanwhile, the run on Trust Company of America continued. A frantic Oakleigh Thorne, president of Trust Company, told Mr. Morgan that the vaults would be empty by the close of business that day if withdrawals did not slacken. Mr. Morgan then convened an emergency meeting with Mr. Baker; Mr. Stillman; E.C. Converse, president of Bankers Trust; and Edwin S. Marston, head of Farmers Loan and Trust.

Mr. Morgan pledged J.P. Morgan & Co. assets to bolster Trust Company, and demanded that the others follow suit. But the bankers pleaded for time, and Mr. Morgan had to call on his bluster and his power to win them over. Trust Company was given an immediate credit of $10 million, which arrived just before the institution's assets were gone.

Exchange Needed Cash

Though suffering from a cold, Mr. Morgan worked through the night on the details of the salvage fund. The next noon, he was told by the president of the New York Stock Exchange that the exchange, battered by the panic selling of steel and railroad issues in recent days, was in danger of suspending operations. An immediate injection of cash was needed, the exchange executive told him.

Mr. Morgan sprang into action again, calling Secretary Cortelyou and getting a pledge of government aid to distribute as needed. He then summoned the bankers again and hammered out an agreement to put up a $25 million loan of pool money, using some of the federal guarantee funds, to the exchange at 10% interest. When news of the loan was telephoned to the trading floor, the interest rate on call money dropped from 100% to 6%, and a cheering pandemonium broke loose.

A Thrift Is Not Just A Thrift, as Time Goes By

The mutual institution created for benefit of depositors evolved into full-service operation of the 1980s.

By Mark Basch

"TRUTH TO SAY, savings banks exercise much of the same influence upon a community that sunbeams do upon the earth, dispelling gloom and despair and giving in their place hope and happiness."

In 1916, the savings bank was celebrating its 100th birthday in the United States when James Hilton Manning, a former president of the Savings Bank Association of the State of New York, waxed poetic about the industry in a book titled "Century of American Savings Banks." And no one would argue back then that the Philadelphia Saving Fund Society, the oldest thrift institution in the country, did not exercise a strong influence on the Philadelphia community.

But today, as the American savings bank turns 170, it is unlikely that thrift industry observers still harbor those romantic notions. After all, when was the last time you saw "Meritor Financial Group" (the recently formed holding company for PSFS) and "sunbeams" in the same sentence?

Consider this passage from the *American Banker's* 100th anniversary edition in 1936:

"Continuously since its founding, the Philadelphia Saving Fund Society has been operated entirely for the benefit of its depositors. It was established for the sole purpose of receiving and investing such small sums of money as might be saved from the earnings of thrifty and industrious persons of modest means and of affording such persons the advantage of security and of interest."

Compare that to the comments of Frederick S. Hammer, chairman and chief executive officer of Meritor at the company's 1986 annual meeting:

"Our future began five years ago. In 1981, interest rates rose so significantly that PSFS incurred the first major loss in its long and distinguished history. This provided an unmistakable and dramatic signal that we could no longer remain a one-product company. At that critical juncture we had two alternatives — to be a strong niche player or become a full-service institution."

New workers helped banks grow.

PSFS opted for the full-service strategy. And that, in a nutshell, is the history of the thrift industry — beginning in the 19th century as mutual institutions operating for the benefit of their depositors and evolving into deregulated full-service financial institutions in the 1980s.

PSFS opened its doors on Dec. 2, 1816, as the first thrift institution in the United States. But the savings bank idea originated in Europe more than 200 years earlier. A Frenchman named Hugues Delestre is credited with being the first man to propose the general idea of a savings bank around 1610.

Another early advocate of the savings bank idea was English author Daniel Defoe, who suggested the organization of a savings bank in the late 17th century.

The earliest savings bank-type institution was formed in Germany in 1765, but historians recognize a "savings and friendly society" formed in Scotland in 1810 as the world's first actual savings bank. It was formed by the Rev. Henry Duncan in Ruthwell, Scotland, and opened on May 10, 1810.

By the time the first U.S. savings banks got off the ground, almost seven years later, there were 78 savings banks similar to Rev. Duncan's institution in the United Kingdom, according to Mr. Manning's book.

Three savings banks were formed in the United States in the fall of 1816, but PSFS got the jump on the other two and opened its doors first. The Bank for Savings in New York was actually formed a few days earlier, on Nov. 29, but slow legislative action prevented its opening for almost three years. The Bank for Savings finally received its charter from the state Legislature in March 1819, and opened on July 3, 1819. It was eventually acquired by the predecessor of Goldome FSB, Buffalo, N.Y.

PSFS opened without a charter in 1816, and was incorporated in 1819 under a special charter granted to it by the Pennsylvania legislature.

The first savings bank to receive a charter was the Provident Institution for Savings in Boston, which was incorporated on Dec. 13, 1816. The Provident opened for business in February 1817. It is now a subsidiary of Hartford National Corp. in Connecticut.

The first savings banks did not make mortgage loans, the principal activity of thrift institutions today. They were permitted to invest only in government bonds and bonds of their own states during their first few years of operation. It wasn't until 1830 that the Bank for Savings in New York became the first savings bank to receive authorization to make mortgage loans. It wasn't until the 1870s that the industry's investment in mortgages approached 50% of total assets.

In the 1980s, the differences between savings and loan associations and savings banks have been all but obliterated by regulatory and legislative changes. In fact, many savings and loans have converted to savings banks for no other reason than to put the word "bank" in their name as a marketing ploy. The name has nothing to do with the thrift institution's operations.

However, savings and loans and savings banks took two different evolutionary tracks before they merged into the modern thrift industry of today.

Mark Basch is an American Banker staff reporter.

IMPORTANT DATES 1610-1982

1610 — Hugues Delestre, a Frenchman, first proposes the idea of a savings bank.

1765 — World's first savings bank-type institution is formed in Germany.

1781 — First building society is formed in Birmingham, England.

1810 — Rev. Henry Duncan forms first "modern" savings bank in Scotland.

1816 — Philadelphia Saving Fund Society, on Dec. 2, becomes first U.S. savings bank to open for business. On Dec. 13, Provident Institution for Savings in Boston becomes first savings bank to receive a charter.

1830 — Bank for Savings in New York becomes first savings bank to receive authorization to make mortgage loans.

1831 — Oxford Provident Building Association of Philadelphia County, Frankford, Pa., opens as the first U.S. savings and loan.

1843 — Charleston Savings Association in South Carolina becomes the first "permanent" savings and loan.

1851 — Oriental Building Association, oldest continuously operating S&L in the country, is formed in Washington, D.C.

1880 — Mutual Home and Savings Association, Dayton, Ohio, is formed and becomes the model for future "permanent" S&Ls.

1887 — National Building and Loan Protective Union in Minnesota is formed as the first "national" savings and loan.

1897 — Collapse of Southern Building and Loan Association, Knoxville, Tenn., leads to collapse of the "national" movement.

1919 — Federal Home Loan Bank System is proposed for the first time.

1931 — President Hoover formally proposes the Federal Home Loan Bank System.

1932 — Home Loan Bank Bill passes Congress.

1933 — Home Owners' Loan Act creates Home Owners' Loan Corp. and authorizes chartering of federal S&Ls.

1934 — Federal Deposit Insurance Corp. is formed in January with 236 mutual savings banks as members, but most drop out by June. Also in June, National Housing Act creates Federal Savings and Loan Insurance Corp.

1938 — Federal National Mortgage Association is created.

1939 — U.S. Building and Loan League becomes U.S. Savings and Loan League.

1944 — Servicemen's Readjustment Act authorizes Veterans Administration-guaranteed mortgages.

1966 — Interest Rate Adjustment Act sets federal limits on deposit interest rates.

1968 — Housing and Urban Development Act broadens S&L powers and splits Fannie Mae into two agencies — one to be called Government National Mortgage Association.

1970 — Emergency Home Finance Act creates Federal Home Loan Mortgage Corp.

1972 — Negotiated order of withdrawal, or NOW, accounts are offered for the first time, in Massachusetts and New Hampshire.

1974 — Congress allows limited number of conversions of mutual S&Ls to stock S&Ls.

1978 — Financial Institutions Regulatory and Interest Rate Control Act authorizes federal charters for savings banks.

1980 — Depository Institutions Deregulation and Monetary Control Act.

1982 — Garn-St Germain Depository Institutions Act ends most distinctions between savings and loans and savings banks.

PSFS, First US Savings Bank, Inspired by British Examples

"TO PROMOTE economy and the practice of saving amongst the poor and laboring classes of the community — to assist them in the accumulation of property that they may possess the means of support during sickness or old age — and to render them in a great degree independent of the bounty of others — is a duty incumbent upon all, who by their services or advice have it in their power to effect so desirable an end," according to an address to the public by the Philadelphia Saving Fund Society in December 1816.

"Of the charitable institutions that have had for their object the amelioration of the human condition, none perhaps deserve higher commendation than those which, under the title of Provident Societies or Savings Banks, have lately been established throughout the kingdom of Great Britain."

The first directors of the United State's first savings bank prepared this address as a sort of preamble to PSFS' articles of association to explain the savings bank principle to the people of Philadelphia "in the confident expectation that its motives may be properly estimated and that it may meet with the general support of the community.

"The office of the Society, which first commenced its operations by the receipt of deposits on Monday the 2nd, will be open every Monday morning from 9 to 11 o'clock for the deposit of money, and on every Thursday during the same hours, for the payment of such sums as may be withdrawn, at No. 22 Sixth Street, between Market and Chestnut Streets."

Twelve Philadelphians, under the direction of Condy Raguet, met in late November 1816 to form a "society" based on the savings banks that had been recently established in Great Britain. Although it did not have a charter (it wasn't incorporated until 1819), PSFS opened for business on Dec. 2, 1816, the first savings bank in the U.S. to open its doors.

According to the articles of association, "The Philadelphia Saving Fund Society is established for the sole purpose of receiving and investing in government securities, or other substantial public stock, such small sums as may be saved from the earnings of tradesmen, mechanics, laborers, servants, and others; and of affording to industrious persons the two-fold advantage of security and interest."

Deposits would bear an interest rate of 4.8%, but "no sum less than one dollar shall be received as a deposit; and no interest shall be allowed on any payments, until they amount to the sum of five dollars."

The first depositor in PSFS (and the first U.S. thrift depositor) was a man named Curtis Roberts, whose listed address was the same as Mr. Raguet's. Mr. Roberts was described as a waiter and a laborer in PSFS directories of the period. "The natural inference is that at the time of opening the account, he was a domestic in Mr. Raguet's home," according to a 1916 book titled "A History of the Philadelphia Saving Fund Society," by James M. Willcox.

Mr. Roberts' passbook shows that he deposited $5 in the Society on Dec. 2, deposited another $5 on April 21, 1817, and was credited with his first 40 cents interest in January 1818.

Few people need to be told today how successful the first U.S. savings bank became. From that first $5 in 1816, PSFS grew to $64,263 in deposits by 1820, passed the $1 million mark in the mid-1830s, and reached $130.9 million by its 100th anniversary in 1916.

Today, as it has been throughout the history of the thrift industry, PSFS is still one of the largest thrifts in the nation with about $13 billion in deposits.

— ***Mark Basch***

Continued from Previous Page

While savings banks were formed to encourage thrift among depositors, savings and loans began as "building societies" that were established to help members build homes.

Like savings banks, savings and loans trace their origin to Europe. The first building society was formed in Birmingham, England, in 1781.

In these building societies, the members would contribute a certain amount of money to the society every month. When enough money was collected for one of the members to build a house, a loan was made. In some cases, a monthly drawing would be held to determine which member would get the loan.

The process would be repeated until every member received a loan and repaid it. Then the society would go out of existence.

There were already 36 savings banks in the U.S. by the time the first American savings and loan was formed on Jan. 3, 1831 — the Oxford Provident Building Association of Philadelphia County, Frankford, Pa.

The Oxford Provident operated in a similar manner as the English building society. It was a terminating society, meaning that it would disappear when all its members had received and paid back a loan.

The spread of building and loans (early savings and loans were called building and loans) started slowly — the second institution was not formed until five years later in Brooklyn, N.Y. But the movement spread rapidly across the country in the middle of the 19th century.

The term "savings and loan" came into use in 1850 by an act of the Connecticut state government. And by 1890, every state in the nation had at least one savings and loan association. The savings banks were confined mainly to the Northeast.

As the savings and loan movement grew, two other types of savings and loans had developed in addition to the terminating society. One was the serial plan, which was developed in the 1850s. Under the serial plan, an association issued several series of shares at regular intervals, rather than issuing one series when the association was organized. With this method, new members could be brought in to the association when a new series of shares was issued. Each series was itself a terminating unit, however.

The serial societies lasted well into the 20th century. In fact, it was the most common type of savings and loan in states like New Jersey, Pennsylvania, and Massachusetts up until the Great Depression.

The third type of savings and loan society was the permanent plan, which originated with the Charleston Savings Association in South Carolina in 1843. But the idea of a permanent association

Who's the ATM

"We looked at all of them and

"We were introducing a new debit card that we wanted to tie into a national ATM system," cites William C. Nelson, executive vice president of InterFirst Bank of Dallas.

"It was critical for us to be able to issue these new cards to our customers as soon as possible. The Plus System® network's technology and expertise proved to be what we needed to meet our objectives.

"Another important factor in our decision was the international scope of Plus System, Inc. which is unique among ATM networks," reports Mr. Nelson. "InterFirst customers like to travel and now with Plus

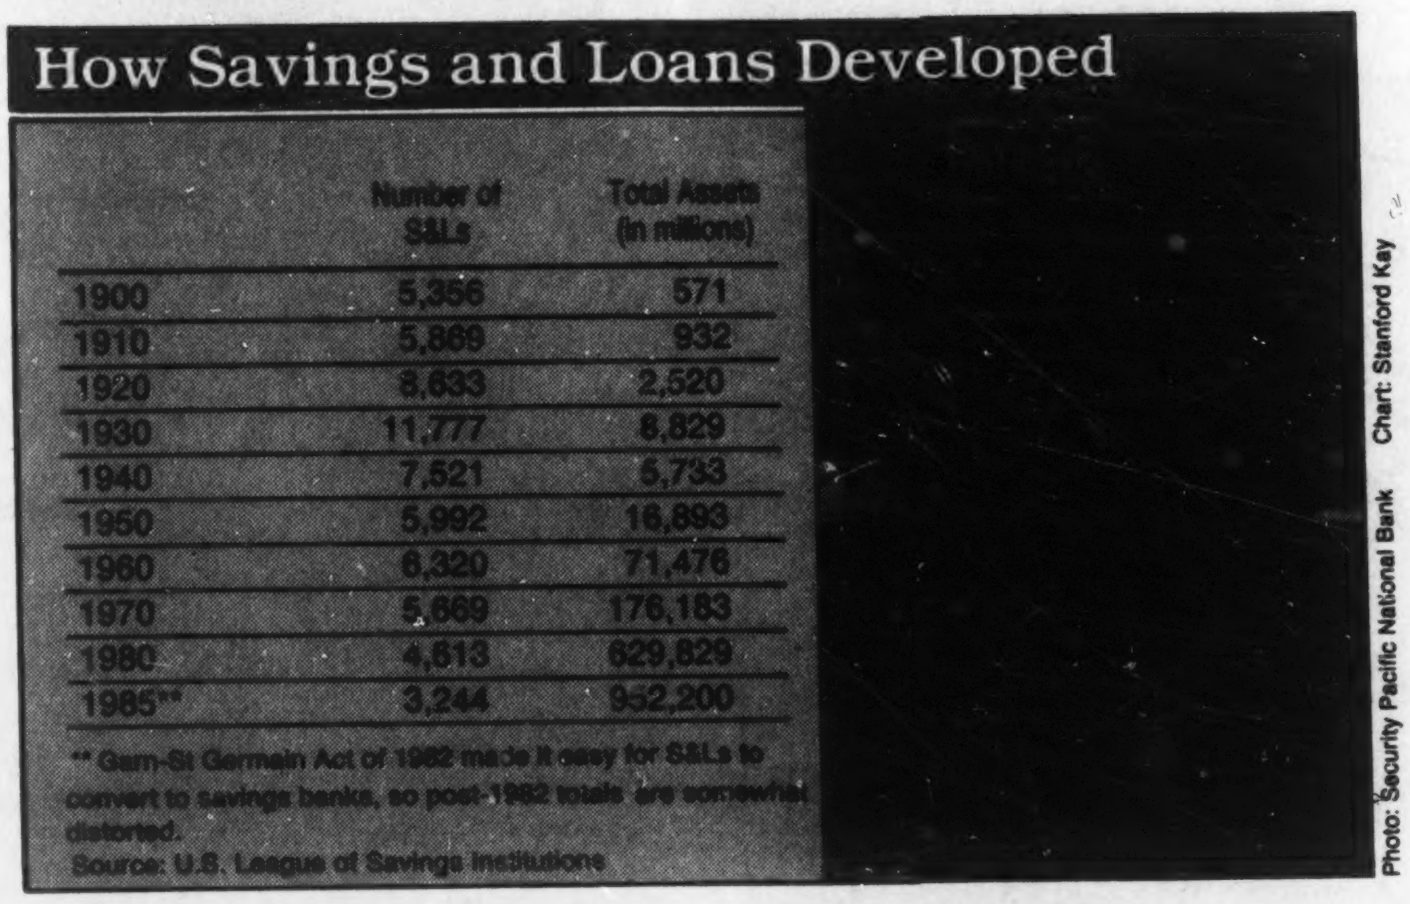
was not popularized until the formation of the Mutual Home and Savings Association of Dayton, Ohio, around 1880. For that reason, the permanent plan is also known as the "Dayton Plan."

The major feature of the Dayton Plan was the issuance of shares at any time, meaning that members could deposit or borrow money at any time instead of at the intervals prescribed by the association. They could also withdraw their money without the penalties imposed by the terminating and serial societies.

As the building and loan industry grew in the 19th century, it was not considered a serious threat to the savings bank business. "From 1816 to about 1890, no competitor of any consequence was disturbing the savings bank," wrote Frank P. Bennett Jr. in a 1924 book called "The Story of the Mutual Savings Bank."

The mutual savings bank was easily the dominant type of financial institution in terms of savings deposits held during that time period. In 1880, 87.5% of all U.S. savings deposits were in savings banks, compared with only 0.8% in savings and loans. Commercial banks held 11.7%.

Over the next 10 years, those patterns shifted somewhat. Savings banks still had most of the savings deposits, with 73.7% in 1890, but savings and loans made a big gain to 10%. Commercial banks' share rose to 16.4%.



How Savings and Loans Developed

	Number of S&Ls	Total Assets (in millions)
1900	5,356	571
1910	5,869	932
1920	8,633	2,520
1930	11,777	8,829
1940	7,521	5,733
1950	5,992	16,893
1960	6,320	71,476
1970	5,669	176,183
1980	4,613	629,829
1985**	3,244	952,200

The earliest figures compiled by the U.S. League of Savings Institutions, organized as the United States League of Building and Loan Associations in 1892, show that there were 5,598 savings and loans in the country in 1893 with assets of about $473 million. Figures from Federal Reserve Board research show that there were 638 mutual savings banks in the U.S. in 1896 with $1.9 billion in assets.

The savings and loan figures do not include the so-called "nationals," savings and loans that were organized in the 1880s mostly as speculative ventures. There were about 240 nationals in 1893.

The movement began in Minnesota in 1887 with the formation of the National Building and Loan Protective Union. These associations solicited deposits on a national basis through newspaper advertisements, offering depositors a high return on their investment. In many cases (but not all), these were fraudulent schemes and most of them disappeared by the depression of 1893 to 1897.

The final downfall of the nationals was sparked by the 1897 collapse of the Southern Building and Loan Association, a large national in Knoxville, Tenn. It led to the failure of other southern nationals, and the nationals just about disappeared altogether by the end of that year.

The period from the 1890s to the Great Depression was one of strong growth for both segments of the thrift industry. Assets of savings banks grew from $1.9 billion in 1896 to $10.2 billion by 1930. Assets of savings and loans rose from $473 million in 1893 to $8.8 billion in 1930.

On the eve of the stock market crash in October 1929, the biggest concern of the savings banks was competition from building and loans. A survey by the savings bank division of the American Bankers Association revealed that 129 of 274 savings banks regarded the building and loan association as the most serious competition in the future development of the savings business.

"No doubt, the building and loan associations are being used as depositories for savings by many individuals who would ordinarily lodge their accumulations in a regular savings bank," the *American Banker* reported on Oct. 9, 1929. "Many such do not contemplate becoming borrowers. They are attracted by the comparatively high security which they [building and loans] offer, and the prospect of a higher return on deposits.

"Perhaps the day may come when the savings bank will be enabled to offer a service to home builders and so meet the building and loan associations on their own terms."

Surviving the Depression

The savings bank industry did not suffer the large number of failures that commercial banks did during the Great Depression, as the public retained its confidence in those institutions.

"The mutual savings banks are governed by wise laws and guided by a great tradition, which are good reasons why the savings entrusted to their care remain secure," wrote Philip A. Benson, president of the National Association of Mutual Savings Banks, in 1934.

But the Depression's effect on the housing industry produced potential problems for the savings and loan industry, so the idea of a central bank for housing lenders, first discussed in 1919, was revived in the early 1930s. The plan had been tabled by the housing boom of the 1920s.

President Herbert Hoover formally proposed the creation of 12 home loan discount banks in November 1931 as a way to stimulate home construction. These banks, under the direction of a Federal Home Loan Board, would "make no initial or direct mortgages," the President said, but would "loan only upon the obligations of the loaning institutions secured by mortgage loans as collateral so as to assure and

Goldome

He swept her off her feet with his savvy savings sense. Let the wedding bells ring.

How Mr. Rich Bought a House

THE OLDEST monument to the American savings and loan industry is a little two-story house that still stands in Philadelphia about 160 years after it was built. The house, which was bought by a man named Comly Rich in 1831, was the first house to be purchased with a mortgage loan from a savings and loan institution.

Mr. Rich purchased the home with the first loan made by the nation's first savings and loan — the Oxford Provident Building Association of Philadelphia County, in Frankford, Pa. (Frankford has since become a part of the city of Philadelphia.)

Oxford Provident was formed by 37 citizens of Frankford on Jan. 3, 1831. The association was modeled after the British building societies, in which members made monthly payments to the society, and when enough money was accumulated to purchase a home, a loan was made to one of the members. When all members had received and paid back a loan, the society would terminate.

Portions of the Oxford Provident's constitution show how the early U.S. building and loans were organized:

- "Each member to pay $5 per share of stock at the beginning of the month and $3 a month thereafter;"
- "Trustees to give notice at a stated meeting the month before there is enough money for a loan of $500. Loans to be used to buy or build dwelling house only. Members, wishing to borrow, to write on a ballot their names and premium they are willing to give. Highest premium gets the loan;"
- "Members can withdraw from association on one month's notice. The amount due them would consist of initiation fee and contributions paid in minus 5%;"
- "No member to hold more than five shares;"
- "No loan on a property farther than five miles from the Frankford markethouse;"
- "Association to stay in existence until every member has had chance to get one house for each share of stock held in the association; balance in treasury to be divided equally among the members, according to number of shares held."

The original bylaws were amended later in the year to allow members to sell their shares and to let new members in if the existing members voted them in.

Oxford Provident received bids for its first home loan in April 1831. Comly Rich, described in various sources as a comb maker or a lamplighter, offered a $10 premium and was awarded the loan to purchase a house that had been built several years earlier. He actually received the first part of his loan, $375, in February of the following year. He was given an additional $125 two years later to complete the loan.

Ironically, the first man to receive a mortgage from a savings and loan was also the first delinquent borrower. Mr. Rich had trouble keeping up the payments almost from the start, and he gave up the house in 1836.

Oxford Provident terminated 10 years after its formation, but a second Oxford Provident Building Association was formed in its place with 79 members, including eight women. A third Oxford Provident was organized in 1852, but unlike the first two terminating societies, the third one was a serial association, issuing several series of shares.

The eventual fate of the third Oxford Provident is unclear. Some thrift industry officials believe it may have been merged into another institution, but the only thing known for sure is that it no longer exists today.

The oldest continuously operating savings and loan in the country is the OBA Federal Savings and Loan Association, Washington, D.C. It was organized as the Oriental Building Association on April 3, 1861.

The Oriental Building Association was organized as a serial association, and it was still operating as a serial association during World War II. With the swelling of savings during the war and the resulting large amount of funds available for the post-war housing boom, the *sixth Oriental Building* Association became a permanent association at the end of World War II.

The 125-year-old institution, which converted to a federal charter and changed its name in 1975, has remained a relatively small, community-oriented savings and loan. It has grown from a $151,198-asset thrift in 1886 to a $29.4 million-asset thrift at its 100th anniversary and to $92.5 million in assets in the spring of 1986.

Current OBA chairman W.B. Tascher said that the thrift hasn't had a foreclosure since 1970. "We put the emphasis on high quality," he said. "We've been very, very careful."

expand the functioning of such institutions."

Mr. Hoover outlined four purposes for the home loan banks:

- "Relieving the financial strain upon sound building and loan associations, savings banks, deposit banks, and farm loan banks that have been giving credit through the medium of small mortgage loans upon urban and farm mortgages."
- "To put the various types of institutions loaning on mortgages in a position to assist in the revival of home construction in many parts of the country and with its resultant increase in employment."
- "To safeguard against the repetition of such experiences [the drying up of the housing market] in the future."
- "For the long-view purpose of strengthening such institutions in the promotion of home ownership."

The President reiterated the need for a home loan bank system in his State of the Union address a month later. "I recommend the establishment of a system of home loan discount banks as the necessary companion in our financial structure of the Federal Reserve banks and the Federal Land banks," he said.

The Home Loan Bank Bill

The Home Loan Bank Bill was passed by Congress in July 1933. It called for the creation of eight to 12 regional banks under the supervision of the Federal Home Loan Bank Board. Membership would be open to building and loans, savings banks, cooperative banks, homestead associations, trust companies, state banks, and national banks having savings deposits.

Members would have to purchase shares in the Federal Home Loan Bank up to 1% of the amount of home mortgages they held. Members could borrow from the bank by depositing mortgages for collateral, with no mortgage of more than $20,000 accepted and no loan by the Federal Home Loan Bank exceeding 40% of the value of property behind the mortgage deposited.

The 12 district banks were first placed in cities that did not have Federal Reserve district banks. For example, instead of New York, the second district bank was placed in Newark, N.J., and instead of Chicago, the seventh district bank was placed in Evanston, Ill.

The thrift industry did not exactly embrace the Federal Home Loan Bank system with open arms. Both mutual savings banks and savings and loans in New York expressed strong opposition.

"The mutuals object particularly to the provisions of the Home Loan Bank Act which make each Home Loan Bank jointly liable for the liabilities of all the Home Loan Banks in the system," the *American Banker* reported. "The local mutual savings banks will not participate with their funds in any bank which is liable for losses outside of the state."

The New York mutuals had set up a mortgage liquidity fund to assist each other in times of trouble, and also had access to the Reconstruction Finance Corp. if necessary, the *American Banker* said. "Under the circumstances, the savings banks do not need the Home Loan Bank and they will not be inclined to become members so long as the assets they must post for membership are liable to be used outside of the state in making good on the losses of other proposed home loan banks."

In addition to the objections of the savings banks, savings and loans added their view that "the Home Loan Bank System is absolutely unsound in principle," the *American Banker* reported.

Membership grew slowly, with only 118 institutions joining by January 1933. But membership jumped to 3,500 by 1936, according to a statement of purpose made by the Federal Home Loan Bank Board in May 1936.

"Although savings banks and life insurance companies are eligible for membership in the Federal Home Loan Bank System, as well as building and loan associations, the membership at present is mostly of the building and loan type, which includes building and loan associations, cooperative banks, homestead associations and savings and loan associations," the document said.

The mutual savings banks did not join the Federal Home Loan Bank System, but many of them did join the Federal Deposit Insurance Corp. when the bank deposit insurance agency was formed as a temporary fund in January 1934.

The issue of whether or not to join the FDIC sparked great debate among savings banks in the fall of 1933. Some savings bankers felt they would be forced to join the insurance agency as part of a Roosevelt administration plan to create a unified federal banking system. Mr. Benson, the president of the National Association of Mutual Savings Banks, said in October 1933 that a majority of mutual savings banks were opposed to membership in the FDIC and were waiting to see if they would be forced to join.

States with large numbers of savings banks — like New York, Massachusetts, and Connecticut — already had in place or had plans for some form of state insurance fund for savings banks.

"Hence the mutual bankers from these states ask why they should place themselves under federal control when they have themselves insured their own deposits probably just as effectually as the federal government could

hope to do," the *American Banker* reported. "And especially since they have done it under non-political auspices, and without liability for losses in less maturely banked states."

But by November, the New York savings banks decided to join the FDIC with the hope that changes would be made in legislation to make the FDIC better serve the mutuals.

"The consensus of opinion among the savings bankers is still strongly against the principle of deposit insurance as a permanent solution to the nation's banking problems," said Henry R. Kinsey, president of the Savings Banks Association of New York, on Nov. 4, 1933. "We are planning to cooperate with the recovery program of the government along the only lines now open to us, but we are dead against deposit insurance as a permanent policy and hope to cooperate with the Administration and with leaders in Congress in working out a better plan.

"Mutual savings banks differ from other types of banks in nature and structure and our status calls for special methods of treatment," he said. "The necessary haste with which the Banking Act of 1933 was framed made such consideration impracticable and we have every confidence that mature attention will enable Congress to take cognizance of our distinctive position."

Elevated trains, rumbling past the Bowery Savings Bank, New York, circa 1903

Photo: Bowery Savings Bank

On Jan. 1, 1934, 236 mutual savings banks joined the FDIC, but none of the savings banks from Connecticut, Massachusetts, New Hampshire, and Rhode Island joined.

A Fund for Mutuals

But six months later, after Congress had passed an extension for the FDIC, only 66 savings banks remained in the fund, representing 11.6% of the country's savings banks. With about 13,700 commercial banks in the fund, the savings bank total represented only one-half of 1% of all institutions in the FDIC.

James D. Garrett, president of the Central Savings Bank of Baltimore, explained why his institution and other savings banks dropped out of the FDIC in July 1934:

"The associated mutual savings banks of Baltimore entered the temporary fund of the Federal Deposit Insurance Corp. last January in order to help stabilize the general banking situation. That purpose has been accomplished, and as temporary membership only was contemplated, they are now voluntarily withdrawing from the insurance fund."

The FDIC extension act passed in June 1934 included a provision that the FDIC directors could set up a separate "fund for mutuals" that would keep the savings banks in the FDIC, albeit with a fund separate from the one for commercial banks. The major difference between the two funds would be that the mutuals' fund would insure deposits up to $2,500, while the commercial bank fund would insure deposits up to $5,000.

The *American Banker* reported that some Washington officials felt that through the FDIC, "a new nationwide solidarity of the mutual savings bank idea can be created which will even bring the Massachusetts and New Hampshire mutuals into the one fold [and] could serve as a springboard from which a national mutual savings bank system can be developed."

"The mutuals on the other hand appear somewhat chafed under the prospect of FDIC regulation and eventual mandatory Federal Reserve Bank membership and regulation," it said. "That this regulation may be dictated by the interests of commercial banks rather than by their special interests seems a reasonable apprehension, and it may be that much more recognition of their special case will be necessary by Congress before they can be persuaded that their participation in federal banking unification will not mean serious subordination of their form of banking service."

Some people pointed out that, during the Depression, many depositors shifted their money from commercial banks to savings banks because savings banks were not failing, but that competitive advantage for savings banks was lost after the FDIC was organized.

"In the next depression, since deposits in commercials will be insured under the auspices of the FDIC, there is not likely to be the same shift of deposits from commercials to mutuals which there was during 1930-32," the *American Banker* said.

The savings banks basically stayed away from the FDIC until the middle of World War II. In the second half of 1943, 122 mutuals joined the FDIC to increase savings bank membership in the insurance fund to 184.

Federal Regulation of S&Ls

While the mutual savings bank industry managed to avoid federal regulation during the 1930s, more federal legislation affecting savings and loans was passed in the two years following the establishment of the Federal Home Loan Bank System.

The first piece of legislation, passed June 13, 1933, was the Home Owners' Loan Act. The act's main purpose was the establishment of "a mortgage distress relief agency to halt the ruinous deflation of real estate and irretriev-

If you're planning to do business in Germany, you should look for a bank that understands a bit more than just German business.

You need an international bank that's at home in Germany. A bank that can not only help you with the complexities of the German market, its laws and regulations, but can also appreciate the implications for your international business. A bank that's large enough to offer you all the financial services you need, yet flexible enough to produce detailed solutions to specific national problems. We are Germany's second largest bank, with 1,000 domestic branches, and over eighty offices worldwide. After being in international business for more than a century we work for about 100,000 companies. We can offer you a profound knowledge of German business – and a bit more.

able loss of their properties for hundreds of thousands of helpless families through foreclosure or tax sale," the Bank Board said.

The Home Owners' Loan Corp. refinanced about $3.5 billion in mortgages during the 1930s, doing most of its work in its first three years of existence. "The task of the Home Owners' Loan Corporation has now been practically completed throughout the United States," the Bank Board said in 1936, "paving the way for private thrift and home finance to resume their traditional function more safely than ever before."

The Home Owners' Loan Corp. was liquidated in May 1951.

Another provision hidden in the Home Owners' Loan Act resulted in the creation of federal savings and loan associations chartered by the Bank Board. The Bank Board noted that only 1,016 of the 3,072 counties in the country were served by mortgage lending institutions at the time. "Federal associations were authorized both to serve neglected communities and to incorporate in their purposes and operations the best methods, organization and practices of existing lending institutions both in this country and in Europe," according to the Bank Board.

The first savings and loan chartered by the Bank Board was First Federal of Miami, which received its charter on July 31, 1933. That S&L was renamed AmeriFirst Federal Savings & Loan Association in 1979.

The final major legislative development in the 1930s was the establishment of the Federal Savings and Loan Insurance Corp. in June 1934 to insure savings and loan deposits in the same way the FDIC insured bank deposits. The FSLIC originally insured deposits up to $5,000 at member S&Ls.

A more subtle change during the Depression was the name change of *building* and loans to *savings* and loans. The building and loan was still the prevalent name for these institutions in the 1920s, but the best indication that things changed during the 1930s is the fact that the U.S. *Building* and Loan League changed its name to the U.S. *Savings* and Loan League in 1939.

S&Ls Go to War

The savings and loan business changed dramatically during World War II. On the deposit side, consumers were finding few consumer goods to spend money on, so instead they saved their money, resulting in large increases in deposits at savings institutions. But on the lending side, the mortgage lending business was stopped by the lack of new home construction.

The Bank Board also underwent wartime changes. Under the War Powers Act of 1941, the Bank Board was reduced to one member for the duration

of the war. It was returned to its present three-member board in 1947.

There was one significant piece of legislation passed during the war. The Servicemen's Readjustment Act, more commonly known as the G.I. Bill of Rights, was passed in June 1944.

It established a program under which lenders could make mortgage loans to veterans with guarantees from the Veteran's Administration. And with the surplus of funds taken in by savings institutions during World War II, lenders were more than ready to help fund the nation's postwar housing boom.

Little regulatory change occurred from the postwar years until the 1960s. The thrift industry began to shrink in terms of number of institutions, but total assets in the industry skyrocketed. The number of S&Ls fell from 7,521 in 1940 to 6,320 in 1960, but total assets jumped from $5.7 billion to $71.5 billion during that time. Savings banks fell slightly from 542 in 1940 to 515 in 1960, but assets nearly quadrupled from $11.9 billion to $40.6 billion.

The next big change in the industry came in 1966, when the Interest Rate Adjustment Act was passed by Congress. The new law put federal interest rate controls on savings and loans and savings banks for the first time.

The Federal Reserve's tight monetary policy in 1966 created high competition for funds between commercial banks and thrifts, with banks generally winning the battle. Banks were offering certificates of deposit at higher interest rates than thrifts could afford to pay and in smaller denominations to bring in a broader range of savers. The Interest Rate Adjustment Act was intended to return some of the competitive advantage for savings to thrifts.

Interest Rate Ceilings

The bill gave the Bank Board, the Fed, and the FDIC authority to establish interest rate ceilings for institutions under their jurisdictions. And within two hours after the bill was signed by President Lyndon Johnson on Sept. 21, the three agencies announced a joint plan for interest rate restrictions.

The ceiling on savings accounts at thrift institutions was set at 4¾%, with some exceptions, while the passbook rate at banks was set at 4%. Commercial banks were also limited to paying 5% on time deposits of less than $100,000.

Bank Board Chairman John E. Horne said that day that the new regulations would "give the savings and loan a better competitive opportunity as far as new deposits are concerned" and would "prevent a further shrinking of funds available to housing and provide more relief to the home builders."

From the late 1960s until the two major deregulation bills of the 1980s, Congress passed several pieces of legislation that helped shape the modern thrift industry. The Housing and Urban Development Act of 1968 included a relatively minor provision that helped modernize S&Ls — it allowed savings and loans to use the term "deposits" instead of shares and "interest rate" instead of "dividend rate."

"It comes so naturally to the lips," said Rep. Richard T. Hanna, D-Calif. "Why shouldn't the terminology be updated?"

The HUD Act also broadened the lending authority of federal savings and loans and gave them the authority to raise capital through the issue of notes, bonds, and debentures.

Another provision of that legislation divided the Federal National Mortgage Association (which had been created in 1938) into two entities — a privately owned corporation retaining the Fannie Mae name and a corporation within HUD called the Government National Mortgage Association.

The Emergency Home Finance Act

Interiors have changed since the days of free-standing safes and teller cages.

It's not banking as usual anymore.

Times were tough enough when competition came from banks alone. Now it seems that everybody's getting into the act.

We at IBM don't presume to offer solutions to all the problems of modern banking. What we can do is help almost any bank or thrift become more competitive.

Know your customer.

Gone are the days when the banker knew every customer by name and net worth.

Yet, as corporate customers lower their balances and turn to non-bank sources for financing, the retail market becomes ever more important.

The challenge is to identify the most likely retail prospects. And to know which products and services to offer.

Many bankers are meeting this challenge with the IBM 4700 Finance Communication System. Which provides platform officers with an up-to-the-second financial profile of retail customers.

The 4700 can be the beginning of a meaningful banking relationship. And the beginning of true relationship banking.

The future belongs to the cost-effective.

Any smart banker knows it isn't enough merely to cut costs—if the result is reduced

> “The spread of building and loans started slowly.”

Donna Reed hands movie husband Jimmy Stewart their personal savings, hoping to stop a run on his building and loan, in “It's a Wonderful Life.”

of 1970 created a third mortgage corporation called the Federal Home Loan Mortgage Corp., which was organized to provide a secondary market for Federal Housing Administration, Veterans Administration, and conventional mortgages.

NOWs and Stock Conversions

State-chartered savings banks in Massachusetts and New Hampshire were given permission in 1972 to offer negotiable orders of withdrawal — or NOW — accounts. This was a product that worked basically as an interest-bearing checking account and became a hot issue during the 1970s as only a few states authorized institutions to offer NOWs. It wasn't until the Depository Institutions Deregulation and Monetary Control Act of 1980 that every institution nationwide was allowed to offer NOWs.

The 1970s also saw the spread of stock conversions by S&Ls. Some savings and loans had been organized as stock associations, but Congress gave limited authority to the Bank Board in 1974 to allow mutual S&Ls to convert for a period of two years. The Bank Board could allow 1% of the industry, or 43 institutions, to convert during that time.

Only six associations received Bank Board approval to convert in 1975, but Congress extended the Bank Board's authority to approve conversions in 1976 and the number of stock institutions has nearly doubled since the early 1970s. There were 616 stock S&Ls in 1975, 789 in 1980, and 1,129 in 1985 (including stock savings banks), according to figures compiled by Keefe, Bruyette & Woods Inc., a securities firm specializing in the banking industry.

After several attempts since the 1930s to establish a system of federal savings banks, the Bank Board was finally authorized to charter savings banks through the Financial Institutions Regulatory and Interest Rate Control Act of 1978. The Garn-St Germain Depository Institutions Act of 1982 greatly increased the number of federal savings banks by making it easier for savings and loans to convert to savings banks.

One Industry

The Depository Institutions Deregulation Act of 1980 and the Garn-St Germain act of 1982 basically completed the deregulation of the thrift industry to the point where savings and loans and savings banks merged into one industry.

The *American Banker* noted the change in its midyear ranking of the top thrifts in 1983 when it combined the ranking of savings and loans and savings banks into a ranking of one single thrift industry.

“The new listing was devised to reflect the dramatic changes that have occurred in the thrift industry since enactment of the Depository Institutions Act of 1982, which permitted changes in charter from a savings and loan association to a federal savings bank,” it said. “Passage of the '82 act and other recent regulatory changes have resulted in the elimination of most of the differences between savings banks and savings and loans. For that reason, the *American Banker* believes that a consolidated thrift listing more accurately reflects the industry today.”

The early 1980s were hard times for the thrift industry, as high interest rates resulted in heavy losses for much of the industry and put many institutions in danger of failing.

And just when the industry was beginning to recover and turn profitable in 1985, thrift crises in Ohio and Maryland caused the collapse of private deposit insurance and threatened the public's confidence in the nation's thrift institutions.

But the industry survived, recording profits totaling $3.8 billion in 1985, according to the Bank Board. And despite the large number of problem institutions, regulators and legislators have assured the survival of thrifts by pledging their support for maintaining a thrift industry separate from other financial services organizations.

“Savings institutions have been here during tough times and good times,” said Gerald J. Levy, 1985-86 chairman of the U.S. League of Savings Institutions. “And we always will be.” ■

services. The question is how to deliver products and services cost-effectively.

The answer? Automated delivery systems.

IBM offers a number of such systems—from walk-up cash issuers and drive-up automated teller machines to sophisticated Personal Banking Machines for in-lobby and off-premises locations.

IBM Banking Systems. A total solution.

The fact is IBM provides a full range of products for banking. All supported by specialized software and service.

But of equal importance are our marketing representatives and authorized remarketers who know the business of banking. And are ready to help you integrate your retail, administrative and back-office operations into an efficient and responsive system. Today, rather than tomorrow.

For more information on our systems for competing in banking's changing climate, contact your IBM marketing representative. For literature or the names of your IBM representative or authorized remarketers, call 1 800 IBM-2468, Ext. 249/CA. Or write IBM, Dept. 249/CA-DRM, 101 Paragon Dr., Montvale, NJ 07645.

The IBM Banking Systems.

Because banking as usual doesn't work in unusual times like these.

ing to restimulate economic growth with low interest rates.

Interest-Sensitive Funds

Shifts of interest-sensitive funds between major markets has been an important feature of international financial markets ever since, especially since the de facto shift to floating exchange rates in 1971 (the fiction of fixed rates was kept up a while longer, until 1973).

Other developments helped stimulate international financial markets and the greater participation in them by U.S. banks. The Interest Equalization Tax of 1963 shut many foreign borrowers out of the New York market and so helped stimulate the issue of Eurobonds on a regular basis.

In 1965, further measures were taken with the aim of "protecting" the U.S. balance of payments and the dollar. They included the Voluntary Credit Restraint Program and the Office for Foreign Direct Investment. Among other things, those "voluntary" programs required U.S. corporations to finance new direct investment outside the United States by borrowing abroad.

Meanwhile, Federal Reserve regulations at that time did not permit banks to pay interest on deposits of less than 30 days and limited the returns they could offer on time deposits of more than 30 days.

In effect, a set of controls and regulations seriously distorted domestic capital and money markets in dollars. Their net effect, therefore, was to export a large part of that business to offshore centers.

Although the controls on exports of capital from the United States were lifted in 1974, and although Federal Reserve regulations have been amended to loosen constraints on the domestic dollar markets, the offshore money and capital markets in Eurodollars have continued to expand under their own momentum, almost unchecked.

What, then, are the techniques that U.S. bankers brought into the international markets? In the Eurodollar bond markets they adapted the pricing, underwriting, and distribution techniques that had been evolving in the United States for more than a century.

The Eurobond primary and secondary markets, despite many improvements, remain less efficient than domestic bond markets in New York, Tokyo, and London, especially in their failure to provide newly issued bonds on equal terms to all investors. But that is being remedied now that investment in Eurobonds has become more dominated than in the past by large institutional investors.

In the international syndicated medium-term bank loan market, or the Eurocredits market, the approach was derived partly from the old technique of bankers' acceptances issued by banks in Britain, and partly from the loan participations that have been a feature of the fragmented American banking market for more than a century.

Note issuance and other back-up facilities, which have become part of the "securitization" of debt in the international markets since 1983, likewise trace their origins partly to U.S. domestic practices. So does the more recent evolution of Eurocommercial paper.

Even the restructuring of debt is handled in international markets on lines that have been commonplace in the United States for a very long time. Because the fragmentation of American banking lends itself to the syndication of medium-term bank facilities, restructuring those facilities is usually negotiated by banks that led the lending in the first place.

American banks are now playing their part in the global integration of financial markets. If that integration succeeds, as its proponents hope, then the distinction of banks by their nationality of ownership and their geographic location may come to lose even more meaning. ■

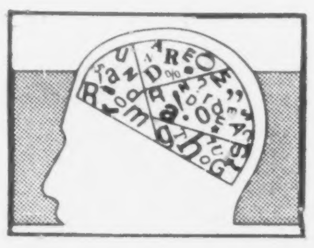
Random Thoughts



By SANFORD ROSE

Senior credit officers, once among the most complacent people in banks, are now impressed with the need to change and improve performance. Responding to a survey prepared by the First Manhattan Consulting Group of New York, officers at some 30 banks, most of which have assets of over $10 billion, express keen dissatisfaction with their current approach to risk management.

About two-thirds of the respondents are unhappy with their overall approach to characterizing risk — e.g., credit risk, liquidity risk, interest rate risk, operating risk, etc. More than 80% feel their banks could do a more comprehensive job in identifying risks in each product — e.g., swaps, standbys, committed lines, etc. Nearly 50% of these credit executives think it is "very important" to improve methods of quantifying the levels of risk in lending.

Some 95% see deficiencies in the quantification of risk for off-balance-sheet activities. And three-quarters of the executives want to do a better job in applying the tools of investment managers to the loan

NY Banking Chief Calls New Ruling 'Nudge, Not a Challenge' to the Fed

By JED HOROWITZ

NEW YORK — The New York banking department has a better grasp of how to expand powers for state-chartered banks than many congressmen and some federal regulators, said Jill M. Considine, state superintendent of banks.

Her department gained national attention last week when it announced liberalized rules for the underwriting activities of securities firms affiliated with state-chartered banks.

"So many of the leading institutions are located here that we are more sensitive than a lot of congressmen to their needs," Ms. Considine said in a telephone interview Monday. "I hope this will be the spark to get some national legislation going."

The state regulator, who has led the banking department since May 1985, noted that New York frequently has taken the lead in carving out new territory for banks. In one sense, she said, her department "was forced into a leadership role" because the changes affecting financial institutions worldwide "are happening in our own back yard."

Jill M. Considine

In a cover statement to her department's interpetive ruling on banks' underwriting and dealing powers, issued on Dec. 23, Ms. Considine aimed directly at influencing national policy.

"In light of the liberalization of global capital markets, the United States is now at a distinct competitive disadvantage due to the Glass-Steagall Act, and the focal point of the financial services

Reagan Budget Predicts FDIC, FSLIC Losses

High Number of Bank Failures Strains System

By BARTLETT NAYLOR and JIM McTAGUE
Washington Bureau

WASHINGTON — Bank and thrift failures will deplete federal insurance funds faster than expected, according to figures released Monday as part of President Reagan's proposed federal budget.

"Outlays by the major deposit insurance funds are estimated to exceed previously planned levels by $5.8 billion in 1987 and $4 billion in 1988," explained James Miller, director of the White House's Office of Management and Budget.

Mr. Miller's explanation came in 350-page volume that proposes an overall federal budget of $1.024 trillion, with a deficit of $107 billion.

The budget office estimated that the Federal Deposit Insurance Corp. will spend $4 billion in 1987, and $1.5 billion in 1988.

FDIC representative Steve Katsanos said the increase in insurance expense comes from higher-than-expected bank failures. "At one point, we thought failures in 1987 would be about the same as 1986," Mr. Katsanos said. "Now, it looks like there'll be a higher number." In 1986, 138 FDIC-insured banks failed.

However, the cost to the FDIC of closing banks has also increased, ac-

First Nationwide Expanding Centers In K mart Stores

Special to the American Banker

DEARBORN, Mich. — First Nationwide Bank, a unit of the Ford Motor Co., will open "at least" 100 convenience branches in K mart stores this year, senior officials from both companies disclosed on Monday.

The expansion will give First Nationwide a network of 403 branches and reaffirms the San Francisco-based thrift's commitment to becoming a national financial institution.

First Nationwide, with assets of $15 billion, presently operates in eight states and recently was granted rights to expand into six other states. Anthony M. Frank, chairman of First Nationwide, said in an interview that he hoped to make acquisitions in all the states in which First Nationwide is authorized to do business.

At a joint news conference held at Ford's international headquarters here, K mart Corp. chairman and chief executive officer Bernard M. Fauber said the retailer expects First Nationwide eventually to have 1,000 branches in K mart stores throughout the country. The expansion will take place during the next several years, but

Merchants Acquires Bank in Ohio Valley

Special to the American Banker

INDIANAPOLIS — Merchants National Corp. here has announced plans to acquire the Ohio Valley Bancorp., the holding company for the $155 million-asset Madison Bank & Trust Co. in Jefferson County, along the Ohio River in southeastern Indiana.

The acquisition is Merchants' 12th since Indiana adopted multibank holding company rules and its first outside of central Indiana. Merchants chairman Otto N. Frenzel 3d said it begins the second phase of the bank holding company's acquisition strategy. He said Merchants will be looking at banks in the northern and southern thirds of the state for future acquisitions.

The agreement calls for Ohio Valley shareholders to receive two shares of Merchants stock for each share of Ohio Valley stock. ■

Former Directors of Tampa Thrift Enter Guilty Pleas

Special to the American Banker

TAMPA, Fla. — Two former directors of Community Federal Savings and Loan Association, Tampa, have pleaded guilty to bank fraud.

In exchange for agreeing to cooperate with the government in its case against several other former Community Federal officials, the men were each allowed to plead guilty to two counts of the indictment.

Before U.S. District Court Judge Elizabeth Kovachevich, Robert Bowes Jr. and Joseph V. Coppola pleaded guilty to charges of conspiracy to misapply bank funds and making a false statement in a Community Federal report.

A 20-count federal indictment was returned on Nov. 6 against seven men, including former Community Federal chief executive officer Leonard C. Garrett. The defendants are accused of bank fraud, including misapplying the funds of a $3 million loan to the now defunct State Capital Corp.

A federal trial is scheduled for early January, but assistant state attorney Judy Hoyer said it probably will be delayed because of trial conflicts.

Under the agreement, Ms. Hoyer said, each man could receive up to five years in prison and a $10,000 fine for pleading guilty to misapplication of bank funds.

On the second count, they could receive up to five years' probation, which would run consecutively after the first sentence, Ms. Hoyer said.

Ms. Kovachevich scheduled sentencing for March 27.

Ms. Hoyer said that since the two men agreed to cooperate with her office in the case against the other defendants, six counts against Mr. Coppola and two against Mr. Bowes were dropped.

In the original 10-count indictment returned on May 29, only four former directors of Community Federal — Mr. Coppola, Mr. Bowes, Mr. Garrett, and Tracy J. Harris Jr. — were charged.

The indictment said they defrauded Community Federal, a small Tampa savings and loan that caters almost exclusively to the local black community.

The thrift, which has had financial trouble in the past two years, is one of the most undercapitalized in the nation, according to published bank documents.

Mr. Coppola, Mr. Bowes, and Mr. Harris also were associated with Top Cat Commercial Builders Inc., an area construction company. The indictment said the men withheld information concerning a $3 million loan from Community Federal to State Capital.

In the second indictment, Steven P. Bazsuly, Michael E. Bazsuly, and Ralph M. Hansen were added as defendants.

Regulators . . .

rities powers for banks, and check-hold practices.

Mr. Ely said, however, that if the bills grow these "barnacles," it may be summer or fall before a bill passes both houses.

"Legislators may begin to feel that if they aren't on board this boat, they might as well forget about 1987 and tack on other banking items," he said.

Mr. McLean said that he did not expect passage to take until summer. He also said he did not feel that the probe into Chairman Gray's expenses would slow things down. ■

FDIC-Insured Banks that Have Failed or Been Rescued in 1986

Washington Bureau

WASHINGTON — The following is a list of U.S. banks insured by the Federal Deposit Insurance Corp. that have failed or that the FDIC has given financial assistance because they were deemed in danger of failing in 1986. A bullet (•) preceding an item denotes a collapsed agricultural bank, defined by the FDIC as having agricultural loans exceeding 25% of its total loans.

The number of insolvent banks that were either liquidated or merged into other companies was 138. Seven others received financial help from the FDIC to keep them from failing. Fifty-nine were agricultural banks.

The total number of bank closings in 1985 was 120.

The number of permanent bank closings that resulted in insured deposit payoffs was 21 in 1986. That's also down proportionately from 1985, when there were 22 deposit payoffs.

□

• 1. **National Bank of White City**, White City, Kan. Closed Jan. 10. Deposits of $9.1 million. Cash advance of $2.9 million. Assumed by the Bank of White City, White City, a newly chartered subsidiary of Herington Bancshares Inc., Herington, Kan.

2. **First State Bank**, Cache, Okla. Closed Jan. 10. Deposits of $17.9 million. Cash advance of $11.3 million. Assumed by the American National Bank of Lawton, Lawton, Okla.

3. **Bank of Dixie**, Lake Providence, La. Closed Jan. 10. Deposits of $36.2 million. Cash advance of $8.9 million. Assumed by the Louisiana Delta Bank, a newly chartered subsidiary of Central Louisiana Bancorp., Ferriday, La.

4. **First Progressive Bank**, Metairie, La. Closed Jan. 17. Deposits of $37.2 million. Cash advance of $19.7 million. Assumed by First Industrial Bank & Trust Co., Metairie, a newly chartered subsidiary of First National Corp., Covington, La.

• 19. **The Citizens Bank of Winigan**, Winigan, Mo. Closed March 7. Deposits of $5.9 million. Payoff.

• 20. **Farmers and Merchants State Bank of Lamberton**, Lamberton, Minn. Closed March 14. Insured deposits of $16.2 million transferred to American Bank of Mankato, Mankato, Minn.

• 21. **Williams Savings Bank**, Williams, Iowa. Closed March 20. Deposits of $10.7 million. Assumed by Iowa Falls State Bank, Iowa Falls, Iowa.

• 22. **First State Bank**, White Cloud, Kan. Closed March 27. Deposits of $5.1 million. Assumed by Silver Lake Bank, Silver Lake, Kan.

• 23. **First State Bank**, Memphis. Closed March 27. Deposits of $15.3 million. Assumed by Memphis State Bank, a newly chartered subsidiary of North Central Texas Bancshares Inc., Iowa Park, Tex.

• 24. **Stockholm State Bank**, Stockholm, S.D. Closed March 27. Deposits of $6.3 million. Assumed by Community State Bank of Stockholm, a newly chartered state bank.

• 25. **Farmers and Merchants State Bank of Huntsville**, Huntsville, Mo. Closed March 28. Insured deposits of $18.2 million transferred to City Bank and Trust Co., Moberly, Mo.

26. **Family Bank**, Ogden, Utah. Closed March 28. Deposits of $20 million. Assumed by Commercial Security Bank, Ogden.

27. **Industrial National Bank of East Chicago**, East Chicago, Ind. Closed April 3. Deposits of $8 million. Assumed by Mercantile National Bank of Indiana, Hammond, Ind.

28. **Eddy County National Bank**, Carlsbad, N.M. Closed April 3. Deposits of $23.1 million. Assumed by United New Mexico Bank at Carlsbad, Carlsbad.

• 29. **The National Bank**, Dyersville, Iowa. Closed April 10. Deposits of $38.2 million. Assumed by American Trust & Savings Bank, Dubuque, Iowa.

• 30. **The Peoples Bank of Mercer**, Mercer, Mo. Closed April 10. Deposits of $9.3 million (all insured). Payoff.

31. **The First National Bank of Ruston**, Ruston, La. Closed April 10. Deposits of $29.8 million. Assumed by Security First National Bank, Alexandria, La.

32. **Center National Bank**, Los Angeles. Closed April 11. Deposits of $36.7 million. Assumed by Independence Bank, Los Angeles.

• 33. **The Talmage State Bank**, Talmage, Kan. Failed April 16. In an assistance transaction, the Federal Deposit Insurance Corp. made a $1.7 million loan to the bank to keep it open.

34. **Florida Center Bank**, Orlando, Fla. Closed April 18. Deposits of $69.4 million. Assumed by American National Bank of Florida, Jacksonville, Fla.

35. **Union County Bank**, Maynardsville, Tenn. Failed April 22. On April 23, $30.1 million in insured deposits was transferred to Commercial Bank of Claiborne County, Harrogate, Tenn. Three offices of Union County Bank opened on April 23 as branches of Commercial Bank.

36. **First National Bank of Irving**, Irving, Tex. Closed April 24. Deposits of $33.5 million. Assumed by City National Bank of Irving, Irving. The failed bank's only office reopened April 25 as City National Bank of Irving.

37. **First National Bank of Bandera**, Bandera, Tex. Closed April 24. Deposits of $14.1 million. Assumed by Bandera Bank, Bandera, a newly chartered subsidiary of Bandera Bancshares Inc., Dallas. The failed bank's only office reopened April 25 as Bandera Bank.

• 38. **The Bank of Nortonville**, Nortonville, Kan. Closed May 1. About $6.4 million in 2,200 deposit accounts were assumed by Kendall State Bank, Valley Falls, Kan. The failed bank reopened as a branch of Kendall.

• 39. **The Bedford National Bank**, Bedford, Iowa. Closed May 1. Insured deposits of $16.5 million. Assumed by American National Bank, Bedford, a newly chartered subsidiary of Thurman State Corp., Thurman, Iowa.

40. **The First National Bank of Carter**, Carter, Okla. Closed May 1. All but about $74,000 of the bank's $6.5 million in deposits were insured and were approved for a payoff by the FDIC. Owners of uninsured deposits will share proportionately with the FDIC in the proceeds from liquidation of the bank's assets.

41. **Bank of Commerce and Trust Co.**, Tulsa, Okla. Closed May 8. Deposits of $126 million. Assumed by the First National Bank and Trust Co., Tulsa.

42. **Rainsville Bank**, Rainsville, Ala. Closed May 9. Its $15.6 million in deposit liabilities were assumed by Jacobs Bank, Scottsboro, Ala.

• 43. **First Bank and Trust of Idaho**, Malad City, Idaho. Closed May 9. Deposits of $54.7 million. Assumed by the Idaho First National Bank, Boise, Idaho.

• 44. **Citizens State Bank of St. Francis**, St. Francis, Kan. Closed May 15. Deposits of $22 million. Assumed by St. Francis State Bank and Trust Co., a newly chartered subsidiary of G.S. Bancshares Inc., Goodland, Kan.

45. **Saddleback National Bank**, Laguna Hills, Calif. Closed May 15. Had about $12.9 million in deposits, of which about $140,000 exceeded the federal insurance limit. Insured deposits were transferred to Landmark Bank, La Habra, Calif., while uninsured depositors and nondeposit creditors will share proportionately with the FDIC in the proceeds of asset liquidations.

• 46. **First State Bank & Trust Co.**, Edinburg, Tex. Closed May 23. Deposits of $118.8 million, of which $1.8 million exceeded the $100,000 insurance limit. After first deciding to pay off insured deposits, the FDIC on May 28 changed this to have the deposits assumed by NBC Bank-Edinburg, Edinburg, Tex., a newly formed subsidiary of National Bancshares Corp. of Texas, San Antonio.

47. **Centennial State Bank of Colorado**, Englewood, Colo. Closed May 23. Deposits of $18.9 million. Assumed by First Interstate Bank of Centennial NA, Centennial, Colo., a newly chartered national bank subsidiary of First Golden Bancorp., Golden, Colo.

48. **Sunshine State Bank**, South Miami, Fla. Closed May 23. Deposits of $97 million, of which $3.7 million exceeded the $100,000 insurance limit. A payoff of insured deposits was arranged, and uninsured depositors will share with the FDIC in the proceeds of asset sales.

• 49. **Roseland State Bank**, Roseland, Neb. Closed May 28. Deposits of $10.1 million. Assumed by Hastings State Bank, Hastings, Neb.

• 50. **Lone Rock Bank**, Lone Rock, Iowa. Closed May 29. Deposits of $7.1

million. Assumed by Swea City State Bank of Swea City, Iowa.

51. **First National Bank and Trust Co. of Norman,** Norman, Okla. Closed May 29. Deposits of $68.9 million. All but $512,000 federally insured. No acceptable bids received. Bank's insured deposits were transferred to the Liberty National Bank and Trust Co. of Oklahoma City, Okla., for a purchase premium of $250,000.

52. **Bank of Columbia Falls,** Columbia Falls, Mont. Closed May 30. Deposits of $40.5 million assumed by First Citizens Bank, Columbia Falls, Mont. Failed bank's sole office reopened as First Citizens Bank.

53. **Banco de Ahorro,** Mayaguez, P.R. Closed May 30. Failed bank's five offices reopened as branches of Banco Popular de Puerto Rico of San Juan. Banco Popular assumed $28.2 million in deposits from the failed bank and agreed to a purchase premium of $412,000.

• 54. **The Citizens State Bank,** McCracken, Kan. Closed June 5. Payoff of insured deposits. All but $5,000 of $10.3 million in deposits were insured.

55. **Security Bank,** Glenrock, Wyo., closed June 6. Payoff of insured deposits. All but $1,600 of $5.8 million in total deposits were insured.

56. **PetroBank NA,** Houston. Closed June 12. Payoff of insured deposits and an advance payment to uninsured depositors equal to 45% of their uninsured claims. All but $2.6 million of $36.8 million in total deposits were insured.

57. **Bossier Bank and Trust Co.,** Bossier City, La. Closed June 13. Assets purchased and deposits of $199.7 million assumed by the First National Bank of Shreveport, Shreveport, La. Premium of $1.673 million paid.

58. **The Bank of Commerce,** Shreveport, La. Closed June 13. Assets purchased and deposits of $69 million assumed by People's Bank & Trust Co., Natchitoches, La. Premium of $600,000 paid.

• 59. **First National Bank of Borger,** Borger, Tex. Closed June 19. Assets purchased and deposits of $68.1 million assumed by the newly-chartered First National Bank of Borger. Premium of $200,000 paid.

60. **The First National Bank of Chanute,** Chanute, Kan. Closed June 19. Payoff of insured deposits. All but $40,000 of $44.9 million in deposits were insured.

61. **The American Bank,** Alma, Wis. Closed June 20. Insured deposits transferred to Bank of Alma, a newly chartered subsidiary of La Farge Bancorp Inc., La Farge, Wis. Deposits totalled $34.8 million, including $1.8 million in accounts over the insured limit.

• 62. **Union Deposit Bank,** Union, Ky. Closed June 26. Insured deposits transferred to the Central Trust Co., Boone County, Ky., a newly chartered state bank. Deposits totalled $6.5 million, with all but $24,000 within the insurance limit.

63. **Continental National Bank of Kentucky,** Louisville. Closed June 26. Deposits of $9.7 million assumed by River City Bank Inc., a newly chartered subsidiary of First Breckenridge Bancshares Inc., Irvington, Ky.

• 64. **Commercial State Bank,** Pocahontas, Iowa. Closed June 27. Deposits of $42.5 million assumed by Citizens State Bank, Pocahontas, a newly chartered subsidiary of Carroll County Bancshares Inc., Carroll, Iowa. This was the first time the FDIC gave a note receivable in lieu of a cash advance to the assuming bank.

• 65. **The Home State Bank,** Rochester, Tex. Closed June 27. Deposits of $8.5 million assumed by Home State Bank, Rochester, a newly chartered subsidiary of Rochester Financial Corp.

66. **Orange Coast Thrift and Loan Association,** Los Alamitos, Calif. Closed June 27. Deposits of $11 million assumed by Capitol Thrift and Loan Association, Napa, Calif.

67. **National Bank of Texas,** Austin. Closed July 2. Payoff of insured deposits. All but $1.3 million of the total $30.6 million in deposits were insured.

• 68. **Farmers State Bank of Clarissa,** Clarissa, Minn. Closed July 11. Deposits of $15.9 million assumed by First State Bank, Rush City, Minn., an affiliate of Kimberly Leasing Corp., Rush City. The FDIC gave a note receivable in lieu of a cash advance.

69. **The First National Bank and Trust Co. of Oklahoma City,** Oklahoma City, Okla. Closed July 14. Deposits of $1.5 billion assumed by First Interstate Bank of Oklahoma City NA, a newly chartered subsidiary of First Interstate Bancorp, Los Angeles.

• 70. **The Bank of Kiowa,** Kiowa, Kan. Closed July 17. Payoff of insured deposits. All but $19,000 of total $10.9 million were insured.

• 71. **Fillmore County Bank,** Geneva, Neb. Closed July 17. Deposits of $11.5 million assumed by York State Bank and Trust Co., York, Neb. The FDIC provided a note receivable in lieu of a cash advance.

72. **Callao Community Bank,** Callao, Mo. Closed July 17. Deposits of $5.1 million assumed by Lafayette County Bank of Lexington/Wellington, Lexington, Mo.

• 73. **The First National Bank of Sheridan,** Sheridan, Wyo. Closed July 17. Payoff of insured deposits. All but about $2.5 million of $59.7 million in deposits were insured.

74. **New Mexico National Bank,** Albuquerque. Closed July 17. Deposits of $146.3 million assumed by First Interstate Bank of Albuquerque. The FDIC provided a note receivable in lieu of a cash advance.

• 75. **Farmer's Bank,** Trimble, Tenn. Closed July 18. Deposits of $17.9 million assumed by First Tennessee Bank NA, Memphis.

76. **Permian Bank,** Odessa, Tex. Closed July 18. Payoff of insured deposits. All but about $152,000 of total $33.8 million in deposits were insured.

• 77. **McCune State Bank,** McCune, Kan. Closed July 24. Deposits of $7.8 million assumed by City National Bank, Pittsburg, Kan.

• 78. **The First National Bank of Prairie City,** Prairie City, Iowa. Closed July 24. Deposits of $18.3 million assumed by Security Bank, Marshalltown, Iowa.

79. **The Bank of Park County,** Bailey, Colo. Closed July 25. Insured deposits transferred to Bank of Mountain Valley NA, Conifer, Colo., a newly chartered subsidiary of Mountain Parks Financial Corp., Minneapolis. Deposits totalled $4.8 million, of which about $18,000 exceeded the insurance limit.

80. **Mountain Valley Bank,** Conifer, Colo. Closed July 25. Deposits of $7.7 million assumed by Bank of Mountain Valley NA, Conifer.

• 81. **First National Bank in Cordell,** Cordell, Okla. Closed July 31. Payoff of insured deposits. All but $99,000 of total $22.6 million were insured.

• 82. **Eden State Bank,** Eden, Tex. Closed July 31. Deposits of $12.4 million assumed by the Eden State Bank, a newly chartered subsidiary of Eden Financial Corp., San Angelo, Tex.

• 83. **Citizens State Bank,** Iowa Falls, Iowa. Closed July 31. Deposits of $50.9 million assumed by Green Belt Bank & Trust, a newly chartered subsidiary of Green Belt Bankcorp., Iowa Falls.

• 84. **The Gering National Bank and Trust Co.,** Gering, Neb. Closed July 31. Deposits of $67 million assumed by Scottsbluff National Bank & Trust Co., Scottsbluff, Neb.

• 85. **The Easton State Bank,** Easton, Kan., closed Aug. 7. Deposits of $15.9 million assumed by Fort National Bank, Easton, Kan.

• 86.**The First National Bank and Trust Co. of El Reno,** El Reno, Okla., closed Aug. 7. Deposits of $43.4 million assumed by the American National Bank of Lawton, Lawton, Okla.

87. **First Citizens Bank,** Dallas. Closed Aug. 7. Deposits of $88.9 million assumed by Grand Bank Northeast, a newly-chartered subsidiary of Grand Bancshares, Inc., Dallas.

• 88. **Graettinger State Bank,** Graettinger, Iowa, closed Aug. 7. Deposits of $11.4 million assumed by Swea City State Bank, Swea City, Iowa.

89. **Medicine Bow State Bank,** Medicine Bow, Wyo., closed Aug 8. Payoff of insured deposits. All but about $4,000 of total $4 million in total deposits were insured.

• 90. **The State Exchange Bank,** Yates Center, Kan., closed Aug. 14, assumed by the Girard National Bank, Girard, Kan. Total deposits $24.8 million.

91. **Citizens National Bank and Trust Co.,** Oklahoma City, closed Aug 14. Deposits of $157.5 million, including $3.7 million in accounts above the federal insurance limit, were transferred to the Liberty National Bank and Trust Company of Oklahoma City.

92. **Bank of Oklahoma, Oklahoma City NA,** with assets of more than $500 million, was in danger of failing but the FDIC announced a conditional $130 million assistance package. As one condition of the assistance program, the bank is to be merged into the $1.6 billion Bank of Oklahoma, Tulsa NA. Both are subsidiaries of BancOklahoma Corp. The FDIC's assistance package, announced Aug. 15, includes $90 million of nonvoting convertible preferred stock in the bank. Also, bank creditors of the holding company have agreed to substantial concessions in the terms of their loans.

• 93. **State Bank of Westphalia,** Westphalia, Kan., was deemed in danger of failing, but the FDIC on Aug. 15 announced that it granted financial assistance to facilitate the acquisition of the bank by Kansas State Bank, Garnett, Kan. The FDIC's assistance package consists of a guaranty to Kansas State Bank against potential losses of approximately $277,000.

• 94. **Mendon State Bank,** Mendon, Ill., closed Aug. 20. Deposits of $18.8 million assumed by First Midwest Bank/Quincy NA, Quincy, Ill.

• 95. **United Bank of Minneapolis,** Minneapolis, Kan., closed July 21. Deposits of $21.6 million assumed by the Bennington State Bank, Bennington, Kan.

96. **Danbury Bank,** Danbury, Tex., closed Aug. 21. Deposits of $9.1 million assumed by Danbury State Bank, a newly chartered subsidiary of P.J.D. Bancshares Inc., Louise, Texas.

97. **The First National Bank in Rifle,** Rifle, Colo., closed Aug. 21. Pay off of insured deposits. All but about $299,000 of the total of $17.1 million in deposits were within the federal insurance limit.

• 98. **Albany State Bank,** Albany, Mo., closed Aug. 28. Deposits of $4.7 million assumed by United Missouri Bank of St. Joseph, St. Joseph, Mo. The FDIC provided a note receivable in lieu of a cash advance.

99. **Buena Vista Bank and Trust Co.,** Buena Vista, Colo., closed Aug. 28. Pay off of insured deposits. All but about $900,000 of the total of $29.7 million in deposits were within the federal insurance limit.

100. **American National Bank of Eastridge,** Casper, Wyo., closed Aug. 28. Pay off of insured deposits. All but about $5,000 of the total of $3.7 million in deposits were within the federal insurance limit.

101. **Mid Valley Bank,** Omak, Wash., was deemed in danger of failing, but the FDIC on Aug. 30 announced that it granted financial assistance to facilitate the acquisition of the bank by First Bank System Inc., Minneapolis. As a result, First Bank System established a new state-chartered bank, First Bank Washington, Omak, to purchase the assets and assume the liabilities of Mid Valley Bank. The FDIC's financial assistance consisted of a guaranty to First Bank Washington against potential losses to a maximum of $3.5 million.

• 102. **Fairview State Bank,** Fairview, Okla., closed Sept. 4. Deposits of $22.7 million assumed by Community National Bank of Okarche, Okarche, Okla. The FDIC provided a note receivable in lieu of a cash advance.

103. **Western Bank,** Midland, Tex., closed Sept. 4. Deposits of $68 million assumed by United Bank NA, Midland. The FDIC provided a note receivable in lieu of a cash advance.

104. **Central Bank and Trust of Tulsa,** Tulsa, Okla., closed Sept. 10. Deposits of $54.5 million assumed by the F&M Bank and Trust Co., Tulsa. The FDIC provided a note receivable in lieu of a

112. **Frontier National Bank**, Vista, Calif., closed Oct. 2. Deposits of $9.6 million were assumed by Vista National Bank.

113. **Columbia Community Bank**, Hermiston, Ore., closed Oct. 3. Deposits of $4.2 million were assumed by Inland Empire Bank, Hermiston.

114. **Independent National Bank**, Covina, Calif., closed Oct. 9. Insured deposits transferred to Chino Valley Bank, Chino, Calif. All but $927,000 of total deposits of total of $27.8 million were within the federal insurance limit.

115. **Valley State Bank**, Baggs, Wyo., closed Oct. 17. Pay off of insured deposits. All but $2,300 of the total of $4 million in deposits were within the federal insurance limit.

• 116. **Bank of Gering**, Gering, Neb., closed Oct. 23. Deposits of $20.4 million assumed by First State Bank, Scottsbluff, Neb.

117. **Stillwater Community Bank**, Stillwater, Okla., closed Oct. 23. Deposits of $18.6 million assumed by the Bank NA, McAlester, Okla.

118. **Security National Bank**, Anchorage, Alaska, closed Oct. 23. Deposits of $38.8 million assumed by Rainier Bank Alaska NA, Anchorage.

119. **Republic Bank**, Blanchard, La., closed Oct. 31. Deposits of $39.3 million assumed by American Bank & Trust Company in Monroe, Monroe, La.

• 120. **Sedgwick County Bank**, Julesburg, Colo., closed Nov. 5. Insured deposits were transferred to the First National Bank of Julesburg. All but $500 of the total of $3.7 million in deposits were within the federal insurance limit.

• 121. **First Stock Yards Bank**, St. Joseph, Mo., closed Nov. 6. Deposits of estimated $32.1 million assumed by the Bank of St. Joseph.

• 122. **The Home Bank**, Savannah, Mo., closed Nov. 6. Deposits of estimated $40.7 million were assumed by United Missouri Bank of St. Joseph, St. Joseph, Mo.

123. **The First National Bank and Trust Company of Enid**, Enid, Okla., closed Nov. 6. Pay off of insured deposits. All but $1.4 million of the total of estimated $91.2 million in deposits were within the federal insurance limit.

124. **The Citizens State Bank**, Donna, Tex., closed Nov. 6. Deposits estimated at $27.6 million assumed by Raymondville State Bank, Raymondville, Tex.

125. **Metropolitan Bank & Trust Co.**, Baton Rouge, La., closed Nov. 7. Deposits estimated at $65.4 million assumed by the Whitney National Bank of New Orleans.

• 126. **Chokio State Bank**, Chokio, Minn., closed Nov. 7. Deposits estimated at $11 million assumed by First Bank of Chokio, a newly chartered subsidiary of Barron Bancshares Inc., Chokio.

127. **The Hoxie State Bank**, Hoxie, Kan., closed Nov 13. Deposits of $32.1 million assumed by Prairie Bank, Hoxie, a newly chartered subsidiary of Prairie Bancshares Inc., Oakley, Kan.

• 128. **First National Bank of Temple**, Temple, Okla., closed Nov. 14. Deposits estimated at $6.6 million, including $7,000 that exceeded the federal insurance limit, have been transferred to Union National Bank of Oklahoma, a newly chartered subsidiary of the Union of Arkansas Corp., Oklahoma City.

129. **The Bank of Northern California**, San Jose, closed Nov. 14. Deposits of $14.1 million assumed Pacific Valley Bank, San Jose.

130. **Texana National Bank of College Station**, College Station, Tex., closed Nov. 20. Deposits estimated at $11.1 million assumed by First State Bank in Caldwell, Caldwell, Tex.

131. **Norman Bank of Commerce**, Norman, Okla., closed Nov. 20. Deposits estimated at $38.8 million assumed by First Interstate Bank of Oklahoma NA, Oklahoma City.

132. **First National Bank**, Willows, Calif., closed Nov. 20. Deposits estimated at $61.3 million assumed by First Interstate Central Bank, Willows, a newly chartered subsidiary of First Interstate Bancorp, Los Angeles, Calif.

133. **Bank of Commerce**, Morristown, Tenn., was deemed in danger of failing, but the FDIC announced Nov. 26 that it granted financial assistance to keep the $66 million-deposit institution from failing. The FDIC's financial assistance consisted of a purchase of assets for $13 million. It was the fifth "open bank" rescue by the FDIC this year.

134. **Hays State Bank**, Hays, Kan., closed Dec. 4. Deposits of $31.2 million transferred to Farmers State Bank and Trust Co. of Hays.

135. **Panhandle Bank and Trust Co.**, Borger, Tex., closed Dec. 4. Deposits of $96 million assumed by Amarillo National Bank, Amarillo, Tex.

• 136. **First National Bank of Stewartville**, in Stewartville, Minn., closed Dec. 4. Deposits of $17.9 million transferred to Marquette Bank Rochester, of Rochester, Minn.

• 137. **Cordell National Bank**, Cordell, Okla., closed Dec. 5. All but $146,000 of the total of $71.3 million in deposits were within the federal insurance limit. Insured deposits were transferred to City National Bank of Weatherford, Weatherford, Okla.

• 138. **The Citizens Bank of Windsor**, Windsor, Mo., closed Dec. 9. Deposits of $23.3 million assumed by United Missouri Bank of Warrensburg, Warrensburg, Mo.

139. **First Bank & Trust Co.**, Booker, Tex., closed Dec. 18. All but $1.8 million of the total of $78.4 million in deposits were within the federal insurance limit. Insured deposits were transferred to First National Bank of Perryton, Perryton, Tex.

140. **Landmark National Bank**, Denver, closed Dec. 18. Deposits of $9.1 million assumed by Omnibank Leetsdale, Denver, a newly chartered subsidiary of Omnibancorp, Denver.

141. **Lago Vista National Bank**, Lago Vista, Tex., closed Dec. 18. All but $34,700 of the total of $10.6 million in deposits were within the federal insurance limit. Insured deposits were transferred to Greater Texas Bank Leander, Leander, Tex.

142. **Farmers State Bank**, Lueders, Tex., closed Dec. 19. Deposits of $8.4 million were assumed by Farmers and Merchants National Bank of Merkel, Merkel, Tex.

143. **Lakeland State Bank**, Pequot Lakes, Minn., closed Dec. 19. Deposits of $46.5 million assumed by the Northern National Bank, Bemidji, Minn.

144. **Bank of Kansas City**, Kansas City, Mo., was deemed in danger of failing, but the FDIC announced on Dec. 29 that to keep the $108.2 million institution from failing it granted financial assistance of $1 million in cash plus other guarantees. This resulted in the bank merging with the Merchants Bank, Kansas City, Mo. It was the sixth open bank rescue by the FDIC in 1986.

145. **Citizens Bank & Trust Co.**, Arcadia, La., was deemed in danger of failing by the FDIC. The agency on Dec. 31 announced that it granted financial assistance to keep the $10.7 million-deposit bank from failing. The assistance consisted of the purchase of $377,000 of poor-quality assets. As a result, the bank's one office became a branch of the First National Bank of Bienville Parish, Arcadia. It was the seventh open bank rescue by the FDIC in 1986. ■

Bank Automation Group Names 18 to Hall of Fame

PHILADELPHIA — The Bank Automation Association of the Delaware Valley has designated 18 people as charter members of its hall of fame, including former officers of the association and outsiders who made significant contributions to its seminars and other programs.

The charter members were inducted on Dec. 4 at a dinner here commemorating the regional group's 25th anniversary.

Former association officers in the hall of fame are J. Thomas Conley of Thomson McKinnon Securities; John F. Diener, formerly of Provident National Bank; John K. Easton Jr., Provident National Bank; George F. Hall, Philadelphia National Bank; Robert B. Muller, formerly of Boardwalk National Bank; William H. Robinson Sr., Electronic Check Services Inc.; Frederick E. Ruccius Jr., Bank of Pennsylvania; George Sims (retired), Land Title Bank & Trust Co.; and Walter E. Trabbold (retired), Bank of Delaware.

Also named were: Barry I. Deutsch, senior vice president, Mellon Bank, Pittsburgh; John F. Fisher, senior vice president, Banc One Corp., Columbus, Ohio; Jeffrey Kutler, staff writer, the *American Banker*, New York; Wayne B. Lewin, president, First Financial Marketing Corp., Schaumburg, Ill.; Robert H. Long, executive vice president, Sendero Corp., Phoenix.

Others included Dale L. Reistad, president, Electronic Funds Transfer Association, Washington; George C. White, president, White Papers Inc., Upper Montclair, N.J.; William E. Whitesell, chairman, department of economics, Franklin & Marshall College, Lancaster, Pa.; and Linda Fenner Zimmer, payment services correspondent, Marlborough, Conn. ■

Comptroller to Study Bank Earnings Problems

By JAY ROSENSTEIN
Washington Bureau

WASHINGTON — Robert L. Clarke, the nation's regulator of federally chartered banks, said here Wednesday that he plans to take a close look at the problems bankers might be having with earnings and the rise in consumer debt.

Mr. Clarke, the comptroller of the currency, said in an interview that he has been told by many bankers, including some from well-run institutions, that they have "no operating earnings," meaning earnings from traditional sources such as service fees and loan income. Instead, he said, banks say they are getting earnings from securities trades, an activity that could encounter tough times if interest rates change. He said the agency will review 1986 financial information that will be coming in from banks, and if this earnings pattern proves to be widespread, "that is troublesome."

Credit card debt as well as the anticipated surge in home equity loans — the latter primarily due to changes in the new tax law — could be other sources of problems that banks need to guard against, the comptroller said.

Robert L. Clarke

Mr. Clarke made these comments in a wide-ranging interview with the Washington bureau of the *American Banker.*

He also said holding companies that last week were given authority by his agency to operate banks in the District of Columbia under a turn-of-the-century law are mistaken if they think the action means they are free to engage in a host of securities activities and other practices that banks are not normally allowed to engage in.

Beseiged Bankers Hold Their Ground Despite Push by Nonfinancial Firms

Interest by Auto Firms, Others Shows the Value of Banking Franchise

By JEFFREY KUTLER

'86 review

A Series of Articles Looking Back and Ahead At Issues Facing the Financial Services Industry

NEW YORK — Nonfinancial corporations in 1986 continued their assault on banking and other segments of the financial services industry, but the picture is not as bleak as many besieged bankers seem to believe.

While deregulation-minded bankers complained, as they had for years, about a "playing field" tilted in favor of powerful new entrants, those very legalities kept the likes of General Motors Corp. and Sears, Roebuck and Co. from completing their invasion. For all their flexibility, they are unable to acquire full-service commercial banks.

Despite its alleged obsolescence, commercial banking demonstrated its value as a franchise worth defending.

Thwarted by those protections, nonbank attackers concentrated their forces where barriers to entry were lowest, primarily the mortgage banking and thrift industries.

There is some justice in corporate takeovers of thrift institutions, where capital needs have been most critical.

On the other hand, few bankers take comfort in knowing that just before 1986 began, Ford Motor Credit Corp. acquired First Nationwide Bank, the nation's eighth largest thrift, with operations in eight states.

Fuqua Industries, an Atlanta-based consumer products conglomerate, last summer took over Georgia Federal Bank, the 68th biggest savings institution in the United States.

Mortgage banking, a historically fragmented sector that is rapidly con-

Washington Bureau

WASHINGTON — Lee Henkel, under fire from members of Congress after little more than a month on the Federal Home Loan Bank Board, met with reporters on Wednesday to rebut charges of favoritism.

"In 35 years . . . my integrity has never been called into question," he declared.

Mr. Henkel, who was appointed to his post by the White House in November, presented data to show that his Dec. 18 proposal to liberalize direct investment restrictions did not contain a provision exclusively for the benefit of the Lincoln Savings and Loan Association, Irvine, Calif.

Mr. Henkel's motion to adopt his plan died for want of another motion to second it.

Lincoln Savings' parent company is controlled by Charles Keating, who has waged an energetic campaign against limitations the Bank Board proposes to set on direct investments.

Press reports have quoted unnamed sources at the Bank Board who say that Lincoln Savings would have been the only institution in the country to benefit from a provision in Mr. Henkel's proposal to allow the grandfathering of direct investments inadvertently exceeding the Bank Board's 1985 limits.

According to *The Wall Street Journal*, if Mr. Henkel's proposal had been adopted, it could have ended a dispute with the Bank Board over $615.4 million in such investments.

Mr. Henkel's Atlanta law firm has done work for Lincoln Savings in the past, and Lincoln has granted loans to certain business interests that Mr. Henkel controls. Mr. Henkel said that he has put all business interests into a blind trust and that he plans to avoid votes that would affect Lincoln or any other thrift with which he has had dealings.

Sen. William Proxmire, D-Wis., the chairman of the Senate Banking Committee, fired off a letter to the Justice Department after the press reports, re-

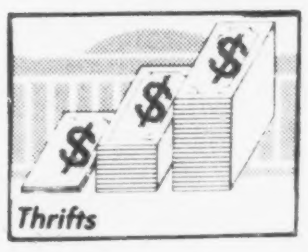
83 Thrift Institutions Required Action by Bank Board in 1986

Washington Bureau

WASHINGTON — A total of 83 federally insured thrifts got into enough financial hot water in 1986 to require drastic action on the part of the industry's chief regulator, the Federal Home Loan Bank Board.



The Bank Board estimates that another 500 institutions may require similar actions. However, the regulators say they lack sufficient money to take care of the problems, and currently they are asking Congress for legislative authority to raise funds.

During 1986, 21 thrift institutions were closed, another 22 were taken over by healthy institutions with the assistance of the Federal Savings and Loan Insurance Corp., and 43 were placed in a management consignment program. Under that program, outside experts are brought in to attempt to reverse the financial fortunes of the troubled institutions.

Three of the thrifts in the management consignment program are de novo institutions, chartered to assume the performing assets of some of the closed thrifts. The new institutions are not included in the following list:

□

1. **Manhattan Beach Savings and Loan Association**, Manhattan Beach, Calif. Jan. 10. Assets of $53 million. Management contract.
2. **Bohemian Savings and Loan Association**, St. Louis. Jan. 30. Assets of $244 million. Management contract.
3. **Great West Savings and Loan Association**, Las Vegas. Jan. 31. Assets of $53 million. Assisted acquisition.
4. **Intercapital Savings Bank**, Jacksonville Beach, Fla. Feb. 7. Assets of $74.8 million. Closed.
5. **American Federal Savings and Loan Association**, Anadarko, Okla. Assets of $147 million. Feb. 7. New board.
6. **Coronado Federal Savings and Loan Association**, Kansas City, Kan. Feb. 7. Assets of $12.9 million. Conservatorship.
7. **Mount Whitney Savings and Loan Association**, Exeter, Calif. Feb. 12. Assets of $82 million. Conservatorship by FSLIC.
8. **American Diversified Savings Bank**, Costa Mesa, Calif. Feb. 14. Assets of $977 million. Management contract.
9. **Capitol Savings and Loan Association**, Mount Pleasant, Iowa. Feb. 21. Assets of $199.6 million. New board, new federal mutual fund charter.
10. **Sierra Federal Savings and Loan Association**, Denver. Feb. 28. Assets of $42.3 million. Closed.
11. **Mercury Savings Association of Texas**, Wichita Falls, Tex. March 14. Assets of $631.8 million. Management contract.
12. **Ben Milam Savings and Loan Association**, Cameron, Tex. March 14. Assets of $308.2 million. Management contract.
13. **Southern Federal Banc Savings and Loan** (the former Lancaster First Federal Savings and Loan Association), Lancaster, Tex. March 18. Asset data not furnished. Indemnification of current officers and directors.
14. **First Federal Savings and Loan Association of Redding**, Redding, Calif. March 20. Assets of $38.5 million. Assisted merger.
15. **Hacienda Federal Savings and Loan Association**, Oxnard, Calif. March 20. Assets of $33.4 million. Assisted merger.
16. **Guaranty Savings and Loan Association**, Longview, Wash. March 21. Assets of $23.4 million. Closed.
17. **Westwood Savings and Loan Association**, Los Angeles. March 27. Assets of $554.2 million. Management contract.
18. **United Savings Bank**, San Francisco. March 28. Assets of $603.9 million. Assisted merger.
19. **Mainland Savings Association**, Houston. April 4. Assets of $1 billion. Closed.
20. **First American Savings and Loan Association**, Oak Brook, Ill. April 14. Assets of $81.3 million. Management contract.
21. **Summit Savings and Loan Association**, Park City, Utah. April 14. Assets of $210.2 million. Management contract.
22. **Columbus Savings and Loan Association**, San Rafael, Calif. April 14. Assets of $280.8 million. Management contract.
23. **Gateway Savings Bank**, San Francisco. April 14. Assets of $163.3 million. Management contract.
24. **Independent American Savings Association**, Irving, Tex. April 22. Asset data not furnished. New officers indemnified.
25. **Flushing Federal Savings and Loan Association**, Flushing, N.Y. April 29. Assets of $467.5 million. Assisted merger.
26. **Washington First Federal Savings and Loan Association of Greater St. Louis**, Normandy, Mo. April 30. Assets of $58.1 million. Assisted merger.
27. **Sun Belt Federal FSB**, Lake Providence, La. May 2. Assets of $196.3 million. Closed.
28. **Mariner Federal Savings and Loan Association**, Seattle. May 9. Assets of $341.9 million. Assisted merger.
29. **Consolidated Savings Bank**, Irvine, Calif. May 22. Assets of $84.3 million. Management contract.
30. **First Federal of Maryland FSA**, Hagerstown, Md. May 23. Assets of $152.7 million. Management contract.
31. **Seapointe Savings and Loan Association**, Carlsbad, Calif. May 30. Assets of $17.3 million. Closed.
32. **Mountain Security Savings Bank**, Wytheville, Va. June 9. Assets of $119.7 million. Assisted merger.
33. **First Federal Savings and Loan of Montgomery County**, Blacksburg, Va. $14.5 million in assets. Assisted merger.
34. **National Permanent Bank FSB**, Washington. June 16. Assets of $100 million. Assisted merger.
35. **Audubon Federal Savings and Loan Association**, New Orleans. June 20. Assets of $223 million. Closed.
36. **New Orleans Federal Savings and Loan Association**, New Orleans. June 20. Assets of $115.3 million. Closed.
37. **Northlake Federal Savings and Loan Association**, Covington, La. June 20. Assets of $100 million. Closed.
38. **Crescent Federal Savings Bank**, New Orleans. June 20. Assets of $87.2 million. Closed.
39. **Community Savings and Loan Association**, Baton Rouge, La. June 20. Assets of $38.5 million. Closed.
40. **American Federal Savings and Loan Association**, Lynchburg, Va. June 26. Assets of $332.6 million. New board.
41. **State Savings and Loan Co.**, South Euclid, Ohio. June 27. Assets of $392 million. Assisted merger.
42. **Citizens Home Savings Co.**, Lorain, Ohio. June 27. Assets of $165.1 million. Assisted merger.
43. **Equitable Federal Savings Bank**, Lancaster, Ohio. July 8. Assets of $708.7 million. Assisted merger.
44. **Lincoln Savings and Loan Association**, Portland, Ore. July 14. Assets of $262.9 million. Assisted merger.

Counselor's Corner

Lender Liability Cases Add New Considerations to the Game of High Finance

→ Continued from Page 7

Provisions in a loan agreement that give the lender the right to choose the borrower's management, and control of cash disbursements and other financial decisions may lead a court to conclude that the lender has exercised excess control. Additionally, taking possession of the borrower's facilities or having the power to elect directors or management may be tantamount to control. This was the finding of the court in Farah.

Assessing the Risk

Lenders can respond to the challenge of lender liability by taking stock of their existing lending practices and implementing changes where needed. A close look at existing loan procedures may reveal on-going practices with the potential for devastating consequences. Immediate action may be required.

As a general rule, you should seek to establish standards for dealing with borrowers that reflect both objectivity and good faith. Additionally, you should adhere to the following specific guidelines:

1. Do not threaten the borrower with action that you do not intend to take.

2. Do not utilize advantage or leverage over the borrower's business to usurp the borrower's decision-making authority or to control the borrower's operations.

3. Even if not expressly required under the terms of the loan agreement, give the borrower advance notice if you are calling the loan due or taking other action to enforce repayment.

4. Exercise good judgment in refusing to fund or continuing to fund a loan, particularly where the circumstances reflect that the ability of the borrower to remain in business is wholly or substantially dependent upon the funding or continued funding of the loan. Provide ample notice to the borrower before refusing to advance or continuing to advance funds.

5. Make certain that the written loan agreement accurately reflects the loan transaction. Attempt to limit oral promises or representations concerning the extension of credit. Don't get caught making oral promises for additional lines of credit or loans that you do not intend to make.

6. Assess your exposure to liability with respect to existing loans. Adopt lending conduct as appropriate for future loans.

7. Make use of committees in deciding whether to continue or to terminate a loan. Structure the committee's decision-making process so as to ensure that lending decisions are not made solely on the basis of subjective or emotional relationships that have developed between the borrower and lending officers.

8. Be discrete in documenting the borrower's credit history. Record only relevant, objective facts, avoiding statements that may be inflammatory or potentially libelous.

9. Involve attorneys in problem loans and loan work-outs to know what you can or cannot do. ■

The Bond Buyer Municipal Bond Index was designed by the Chicago Board of Trade to serve as the basis for trading Long-Term Municipal Bond futures contracts when approved by the Commodity Futures Trading Commission. The Index represents an average of the figures obtained when the price of each of 40 select term bonds is divided by a figure derived from the amount at which the bond would be priced to yield 8%. In all computations, the maturity of a bond is represented by its first call at par. The Index is computed daily and is quoted in points and 32nds.

Remics Provide a Note of Optimism To the Bond Market

By RICHARD GOTCHER
The Bond Buyer

WASHINGTON — There are some worrisome signs for bond markets in general as the new year begins: The dollar is slumping, oil prices are set to gain ground, and strong economic indicators dampen hopes that the Federal Reserve Board will push interest rates down.

For the mortgage-backed securities market, however, a new vehicle structured to bring attractive mortgage debt obligations to capital markets should increase the supply of credit to the residential and commercial mortgage markets.

Real estate mortgage investment conduits, also known as Remics, are a new mortgage-security vehicle created by the Tax Reform Act of 1986. They open a wide variety of investment opportunities, and they probably will encourage many institutions to reevaluate basic investment and business strategies.

According to a report prepared by the research department of Salomon Brothers Inc., real estate mortgage investment conduits "will facilitate the creation of residential and commercial mortgage investments that better meet the needs of traditional capital market investors."

Moreover, the Salomon report adds, Remics may produce "an increase in the supply of funds available to mortgage borrowers."

The provisions that created these new mortgage-security vehicles eliminate the need for issuers to balloon their balance sheets and also may eliminate the need to establish special-purpose finance subsidiaries to issue collateralized mortgage obligations. Remics are multiple-class mortgage securities that qualify as asset sales for federal income tax purposes, eliminating the need for a variety of structural inefficiencies that are required for CMOs.

The Salomon report notes other advantages that real estate mortgage investment conduits offer investors over collateralized mortgage obligations:

- They are qualified mortgage investments for thrifts and are eligible for investment by real estate investment trusts under certain guidelines.
- Foreign investors in regular interests of real estate mortgage investment conduits are not subject to the 30% withholding tax, regardless of the issue date of the underlying mortgage collateral.
- Remic multiclass pass-throughs could register higher credit ratings than traditional collateralized mortgage obligations because investors would own a share of the collateral rather than a bond secured by the mortgages.
- Investors can expect the secondary market in real estate mortgage investment conduit residuals to be more liquid than for collateralized mortgage obligation residuals because constraints imposed by unlimited liability and accompanying restrictions on transfers do not apply to Remics.

The attractiveness of Remics could be enhanced even further if a pending regulatory change takes effect, the report adds.

Now under consideration is a rule that would make most collateralized mortgage obligations and real estate mortgage investment conduits eligible for repurchase agreements at a 5% margin, and also would make qualified private pass-throughs eligible as repurchase agreement collateral.

If that change is adopted, the report says, then Remics and qualified pass-throughs will be available for only a few basis points above the rate for similar agency securities.

On Friday, the Labor Department is scheduled to issue December figures for unemployment and the producer price index. Tom Megan, an economist with Evans Economics Inc., predicted that seasonal factors should produce a 6.9% unemployment rate, down slightly from 7% the previous month. Payroll additions will total only 150,000, he estimated, compared with 249,000 in November.

Mr. Megan cited bad conditions in the automotive and lumber industries as the main reasons for the sluggish employment picture. He predicted that producer prices will remain about the same as in November, when that index rose 0.2%. ■

The Battle Lines In the Fight Over Those Card Rates

Levels Are Justified, Banks Say; Consumer Groups Cry Greed

By PHILIP T. SUDO

News Analysis

NEW YORK — The argument over interest rates on bank credit cards — specifically, whether they are too high — has divided consumers and bankers ever since states began deregulating their usury ceilings.

Up until now, the debate has been sporadic. Last Thursday, however, a coalition of the country's largest consumer groups announced the launching of a nationwide campaign to bring down rates, catching the attention of both bankers and legislators.

Ironically, the "fight and switch" campaign begins at a time when many banks have begun voluntarily to inch their rates downward. Nonetheless, the group said, it will encourage card holders to shop for better prices and services, and seek legislative remedies in the area of disclosure and possibly rate ceilings.

What follows is a look at some of the key questions in the debate:

- **Are banks making an unreasonable profit?** There is no doubt that the high rates have been profitable. In 1985, credit card earnings delivered a 5% return on assets, when a 1% ROA was considered good for a bank's entire operations.

As a result, representatives from the consumer coalition argue that banks are "gouging" consumers with annual fees and rates that are exorbitantly high. A 19.8% rate today is typical at most major banks, and the figure runs as high as 21% at firms such as the First Interstate Bank of California — despite the fact that the cost of funds has plummeted during the last few years to

US Banks Seek Equal Treatment As Capital Talks Move to Japan

By GORDON MATTHEWS and BARTLETT NAYLOR

Bankers and financial industry observers greeted the proposed joint capital guidelines of the Federal Reserve Board and the Bank of England as a positive step, but other banks and nonbanking competitors, they said, must be within the same framework to insure competitive equality.

Meanwhile, E. Gerald Corrigan, president of the Federal Reserve Bank of New York, was reportedly discussing capital adequacy ratios with central banking officials in Japan, whose major banks have long operated with lower capital levels than those of many of the their international competitors.

"It's a step in the right direction," said Donald B. Riefler, chairman of the sources and uses of funds committee of the Morgan Guaranty Trust Co., New York. "We're very much in favor of risk-based capital [regulation] as an alternative to the current method."

The Fed proposed guidelines last Thursday that would for the first time require the off-balance-sheet items of banks to be backed by capital. It was joined by the Bank of England in proposing that bank capital be gauged by the risks against it and by a standard definition of primary capital.

"If applied flexibly, this can't help but be beneficial," said Robert P. Shay, professor of finance at Columbia University's school of business. "But I think it's essential that the Japanese be brought in as well."

Much Ado About British Deregulation

Some Question Whether '87 Profits Will Justify the Big Bang Hoopla

By JOHN J. DUFFY
London Bureau

LONDON — The sweeping Big Bang deregulation of Britain's securities markets, plus another surge in Eurobond activity, made London the most active of the world's financial centers in 1986.

At yearend, however, many bankers and market experts here were questioning whether profits from such activity in 1987 will justify all the hoopla.

Big Bang, of course, was the most visible international financial event of 1986. The Oct. 27 abolition of fixed commissions on the London Stock Exchange and the elimination of the barrier between brokers and market makers brought a huge number of new players onto the international scene.

Merrill Lynch & Co. became a member of the stock exchange. Morgan Guaranty Trust Co. of New York and Bankers Trust Co., as well as other U.S. banks, became primary dealers in British government bonds, or gilts.

'86 preview '87

A Series of Articles Looking Back and Ahead At Issues Facing the Financial Services Industry

However, the sharp increase in competition in the aftermath of Big Bang has not left the smaller players by the wayside yet as several analysts had predicted that it would.

In fact, the only catastrophe so far

He noted that the effort "doesn't mean common requirements, but a common approach. I wouldn't want to see the standards get too detailed or [see] too much of straitjacket placed on banks, because I think there are differences in management that can tolerate different degrees of risk."

He expressed some concern that the requirements, even if flexible, might put banks at some disadvantage vis-a-vis their nonbanking competitors. That was a principal concern of Mr. Riefler at Morgan Guaranty and of other bankers as well.

"The whole procedure has difficulties," said Mr. Riefler, "because a lot of institutions have not come under these rules. We're glad to see British banks brought in, but you could look beyond them to the German, French, and Japanese banks, and then to the investment bankers, the insurance firms, the securities firms, and the nonbank banks."

A banking analyst, Thomas K. Brown of Smith Barney, Harris Upham & Co., agreed that "all banks applaud the move to more risk-adjusted capital but then ask when do you start regulating the securities firms. A lot of their business is the same, and there are no capital requirements per se on brokerage firms."

Mr. Brown said he felt the coordination between different countries in matters of capital is a major breakthrough. "It would be significant even without Japan, but with the Japanese it would be a very powerful move indeed," he emphasized.

Anthony Saunders, associate professor of finance at New York University, said the "long overdue" move by the two central banks addresses "the big question of bringing the risk of the off-balance-sheet business under control with sufficient bank capital to meet losses on those activities."

"The whole idea of risk-related capital adequacy is very good concept," he said, "and if the regulators now move toward risk-related deposit insurance premiums, we will have gone a long way to controlling risk in banking."

Jonathan H. Francis of Wharton Econometrics Associates, Philadelphia, said the move amounted to recognition that "banking has become a global industry," and that more information about its activities is needed.

"In other circumstances, such as the Latin debt crisis, the fact that we didn't have enough information on the exposure of the banks was one of the big factors that precipitated a crisis and made it worse."

He applauded moves toward "a general regulatory framework where we will have a consistent picture of banks' balance sheets and the risks associated with those balances sheets. There have been many banking developments, particularly relating to off-balance-sheet items that have a risk profile that is largely unknown. ■

Corrections

An *American Banker* article on Jan. 6 ("NY Banking Chief Calls New Ruling 'Nudge, Not a Challenge' to the Fed," page 1) incorrectly characterized the New York State Banking Department's stand on the Hongkong and Shanghai Banking Corp.'s 1979 investment in Marine Midland Banks Inc. The New York banking department opposed the takeover, causing Marine Midland to seek a national charter for its principal bank.

□

Also on Jan. 6, First Hawaiian Creditcorp was identified incorrectly as the parent of First Hawaiian Bank ("In the News," page 3). First Hawaiian Inc. is the parent of the First Hawaiian Bank, the second largest financial institution in Hawaii. ■

How Big Was the 1986 Bang in British Finance?

→ Continued from Page 1

has been the exchange's own computerized quotation system, the Stock Exchange Automated Quotation System, or SEAQ, which has crashed repeatedly under the weight of rising trading volumes.

The effect of Big Bang on trading was generally as expected. Trading volume rose by nearly 30% in stocks and nearly doubled in gilts, while the costs of transactions plunged 30%, to 50%.

'86 review preview '87

A Series of Articles Looking Back and Ahead At Issues Facing the Financial Services Industry

The most dramatic illustration of the change wrought in the markets by Big Bang was the exchange floor itself on the day before Christmas Eve.

Where in previous years traders stood shoulder to shoulder conducting business and holiday celebrations at the same time, this year the floor was deserted. Trading had moved "upstairs" to the dealers' own high-technology trading rooms, leaving only a few old-timers on the floor to exchange shares and Christmas greetings.

The effect of Big Bang on profits has been more difficult to gauge, and many firms admit that it will be years before they can recoup totally the huge amounts spent on people and systems.

"People have not yet begun to focus completely on the bottom line," one dealer said. "That will come in 1987 or later."

For the Eurobond market, the other major market centered in London, 1986 was also a vintage year. Total funds raised in the market last year surged to a record $183.8 billion, up 36% from $133 billion in 1985 and more than double $80 billion in 1984.

In 1986, Eurobond market volume topped international syndicated loan volume for the first time. Such loans last year totaled $174.7 billion.

Despite the astounding numbers, many market experts are cautious about the future of the Eurobond market.

"The volume in 1986 probably represents a cyclical high," said Ben Weston, the managing director and head of capital markets at Bankers Trust International. Because of a slackening in demand for funds and a probable halt in the decline in interest rates, volume in 1987 could fall to around $150 billion or so, Mr. Weston said.

In addition, U.S. banks and securities firms are facing greater competitive pressure because of a decline in the amount of financing done in U.S. dollars.

In 1986, because of the year-long decline in the value of the U.S. dollar, that currency's share of the Eurobond market dropped from 70% to 63%, while the market share of the yen doubled from 5% to 10%. This trend is expected to continue in 1987.

The shift to the yen helped to push five Japanese banks and securities firms into the top 20 major Eurobond underwriters — and to push U.S. banks, such as Bankers Trust, out of the top 20.

"It's critical that U.S. banks get more involved in foreign currency markets," said Mr. Weston.

In 1986, Morgan Guaranty remained the only U.S. commercial bank to figure prominently in the Eurobond market. According to the *International Financing Review*, a weekly Euromarket magazine, Morgan ranked fourth among all underwriters last year, with a 5.35% market share.

The leader was Credit Suisse First Boston, with a 10.68% share; followed by Nomura Securities, with 7.97%; and Deutsche Bank, with 6.75%. The only other U.S. bank near the top was Bankers Trust, which came in 22d, with a 1.36% market share.

The Eurobond market grew intensely competitive in 1986, and, as opposed to the British securities market following Big Bang, competition did cause several smaller operators, such as First Interstate Capital Markets, to pull out completely. Experts say that more small and medium-size firms will come to the same decision in 1987.

"There are too many people trying to do too many things," said David Band, a managing director at Morgan Guaranty.

In 1987, Mr. Band said, more business will be concentrated among the top firms, particularly those that are strong in nondollar markets. Those without a particular niche to fill probably will pack up and go home, he said.

Still Holding in Short-Term Credit

While U.S. banks continued to have little success in Eurobonds in 1986, most continued to show their prowess with short-term credit instruments and traditional syndicated lending.

In Eurocommercial paper, for example, five U.S. banks — Citibank, Chase Manhattan, Bankers Trust, Bank of America, and Manufacturers Hanover — rank among the top 20 dealers. In international syndicated loans, U.S.

PNC to Open Bank Subsidiary in Paris

By A. JOSEPH NEWMAN JR.

PHILADELPHIA — The PNC International Bank, a unit of the $21 billion-asset PNC Financial Corp., Pittsburgh, is planning to open a subsidiary bank in Paris, subject to approval of the Bank of France and the Federal Reserve.

The new bank, PNC International Bank France, would be PNC International's first subsidiary bank in Europe. PNC has a merchant banking unit in Australia, PNC International Financial Services Ltd., and its PNC International Finance (Asia) Ltd. is a deposit-taking company in Hong Kong.

Top officials of the new Paris bank have not been named yet. The institution will do a wholesale business only.

PNC International Bank now operates finance company subsidiaries in Italy under the name of PNC International Italy SpA, Milan, and it also has companies in Argentina and Brazil.

Edward J. Casselle, vice president and general manager of the Philadelphia office of PNC International, said the Pittsburgh National Bank branch and the European representative office of PNC International in Paris would continue to operate.

Mr. Casselle said that a full banking license in France would enable PNC International to diversify funding there through the French and Eurobank markets. A bank, he added, also offers tax advantages. In addition, PNC International plans to open a leasing company subsidiary in Paris.

The proposed new bank in Paris was announced at a press briefing by PNC International in Philadelphia. PNC International is 75% owned by Pittsburgh National Bank and 25% owned by the Provident National Bank, Philadelphia, both units of PNC Financial Corp.

PNC International also announced that it has named Carol Groeschel, vice president and deputy manager of its finance company unit in Milan, vice president and manager of the European representative office in Paris. She succeeds Constance Bentzen, who becomes the manager of the Los Angeles office of PNC International. ■

Death Knell Rang Often for Banks, Thrifts in '86

The Grim Reaper paid 138 house calls for the Federal Deposit Insurance Corp. last year as a record number of federally insured banks were closed. The Federal Savings and Loan Insurance Corp. also had need of the sinister gentleman's services, because thrifts were not spared their own toll in 1986.

Last year, the FDIC spent an estimated $2.7 billion, or 14%, of its $18.8 billion fund to close 138 insolvent banks and provide merger assistance to seven other failing institutions. It spent another $1.5 billion to settle the accounts of banks that failed before 1986.

The FSLIC began 1986 with an estimated $6.1 billion in reserves and ended it with about $2.2 billion after closing 21 insolvent institutions, providing merger assistance for 22, and placing 43 others in the management consignment program. Under that program, outside experts are brought in to attempt to reverse the financial fortunes of the troubled institutions.

The problems in the agricultural industry and the energy industry showed up clearly for banks in 1986, with most of the closed banks concentrated in the nation's midsection. Fifty-nine of the 138 closed banks were classified by the FDIC as farm banks, meaning that more than 25% of their total loans were agricultural loans.

The FDIC added the open-bank assistance option to its two main methods of dealing with a failure — arranging a merger by another bank or, more drastically, paying off depositors outright. If the agency determines that it would be less costly than a merger or payoff, it has the authority to provide assistance to an open bank. The FDIC used that authority seven times last year.

Although the FSLIC continued to use the management consignment program as a less-costly alternative in dealing with troubled thrifts, it still needs additional funding. New premiums this year from the S&L industry will bring reserves back above $4 billion, but regulators such as Federal Home Loan Bank Board Chairman Edwin J. Gray have claimed that this is hardly enough money to deal with some 500 troubled institutions. Closing troubled institutions in California alone could bankrupt the fund.

The recapitalization plan that failed in the last session of Congress would tap healthy institutions to raise about $25 billion long-term to cover closing costs for the sick ones.

How will 1987 look a year from now? Some regulators were predicting that this year probably would see a similar number of failures, but that forecast is not universal.

"At one point, we thought failures in 1987 would be about the same as 1986," FDIC spokesman Steve Katsanos said. "Now, it looks like there'll be a higher number." ■

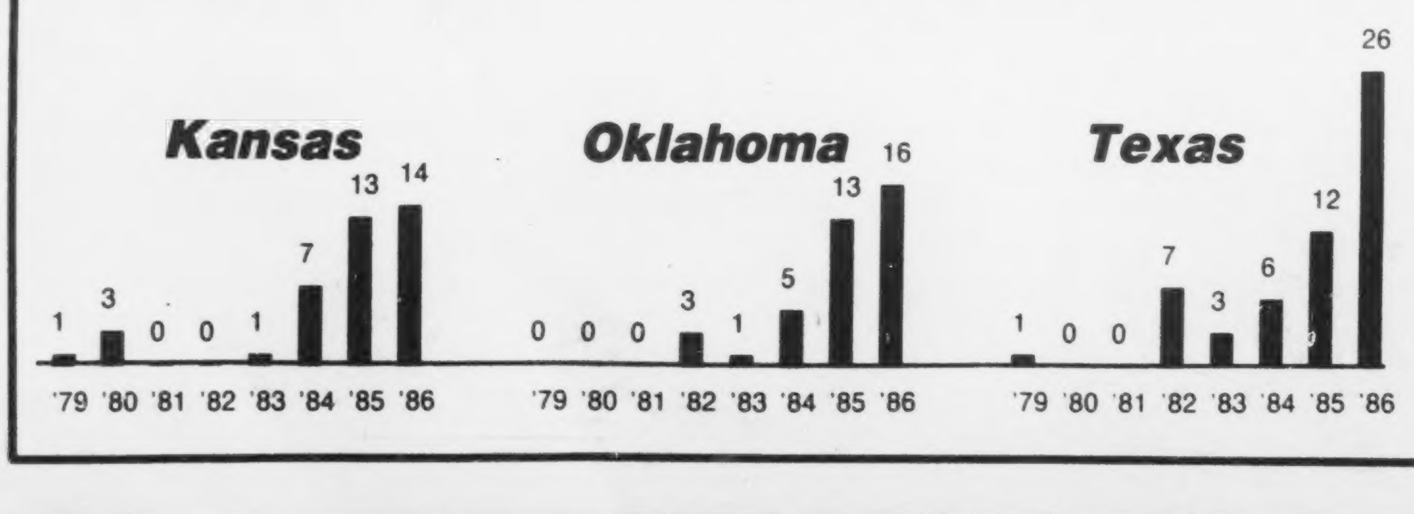
Failures Mount for Three Hard-Hit States



Joint Proposal On Capital Rules

➻ Continued from Page 9

als penalize American banks but do not affect U.S. thrifts or foreign banks, with the exception of British institutions.

"If risk-based capital standards make sense," he added, "then banks taking little asset risk should be allowed to go below the existing capital requirements." The Fed wants the risk-based measure to supplement, rather than replace, the existing capital requirement.

Among the top 50 bank holding companies, according to a Federal Reserve staff memorandum, the primary capital-to-assets ratio ranges from 6.1% to 9.2% and averages 7.2%. The staff's estimate of the proposed risk-asset measure ranges from 6.1% to 11.2% and averages 8.1%.

The proposed agreement between the U.S. and England also would aim at a common definition of what constitutes primary capital. In the U.S. the new definition would add preferred stock with a life of more than 25 years to primary capital, for example.

However, goodwill added to a bank's balance sheet could no longer be counted as capital. Existing goodwill would be grandfathered under the proposal.

Although the proposed agreement between the U.S. and Britain contemplates uniform standards, the Fed staff noted in its memo to the board some areas of differing treatment that have not been resolved.

Britain requires, for example, that 100% of a bank's net open foreign exchange position be supported with capital. While Thursday's proposal did not address foreign exchange positions held by U.S. banks, it stressed that "U.S. authorities are committed to developing an approach to incorporating foreign exchange risk into the proposed risk-asset measure."

Smaller Banks, Lower Risks

A risk-based measure of the kind now being proposed would likely affect the nation's big banks, which have large off-balance-sheet exposures and huge credit card portfolios, more than the small banks.

Indeed, since the risk-based measure assigns a lower weight to the kinds of assets that smaller banks are most likely to hold — obligations of the U.S. government, state and municipal debt, and claims on other banks, for example — than it does for commercial and industrial loans, financial guarantees, and claims on foreign borrowers, the risk-based measure could well mean a lower level of capital, in dollar terms, for those institutions.

In its memorandum to the board, the Fed staff declined to set a percentage level for the risk-based measure, although it said it would almost certainly be higher than the current standards of 5.5% for primary and 6% for total capital.

Instead, the board said it will wait until it has some experience in using both measures "in tandem" before deciding upon the appropriate risk-based capital ratio.

Mr. Volcker said that he expects to see comment from banks about the appropriate ratio over the next 90 days — the comment period for the proposal released Thursday — and added that the board is unlikely to seek additional comment when it decides what the ratio should be.

As a practical matter, most small banks maintain capital well in excess of what is required now or would probably be required under a risk-based system. Larger banks have been building capital to levels above the 5.5% requirement, though many banks would likely find themselves below the new standard.

Mr. Volcker said adoption of the risk-based measure would likely change bank behavior, and he suggested that many of the banks that would be affected most would welcome the change.

"Banks are giving away these kinds of services because they feel the market forces them to," he said referring to some of the off-balance-sheet risks, such as letters of credit and interest rate swaps.

Once they are required to back those risks with capital, he said, "I would hope they would implement more rational pricing." ■

Freddie Mac Will Move To New Headquarters

Washington Bureau

WASHINGTON — The Federal Home Loan Mortgage Corp. will break ground later this year for a new headquarters in nearby Tysons Corner, Va., to make room for a burgeoning employee population.

"Our present office space in downtown Washington simply can't accommodate our staffing requirements any longer," said J. David Robinson, vice president of administration and corporate properties.

Mr. Robinson said Freddie Mac increased its work force by 50% to 1,500 in 1986 to handle increased mortgage activity. Nearly 1,050 employees work at the headquarters, and half of them live in northern Virginia, Mr. Robinson said. By the middle of this year, Freddie Mac projects that its staff will reach a total of 1,700 nationwide, with more than 1,200 working at headquarters.

Under the terms of a real estate agreement, Freddie Mac can develop up to 44.5 acres of land near Dulles airport. ■

London Review . . .

➧ Continued from Page 2

banks dominate the league tables, or business rankings, accounting for nine of the top 16 lead managers.

The unchallenged leader in both areas was Citibank, which arranged loans and note issuance facilities to the tune of $42.7 billion in 1986 and managed 64 Eurocommercial paper dealerships.

Unfortunately for the banks, commercial paper, syndicated loans, and Eurobonds are not where the profits are these days. The most profitable area in the Euromarkets currently, experts say, is equity and equity-related issues — and here U.S. banks have no presence at all.

A major impediment is the Glass-Steagall Act, which prohibits American banks from underwriting more than $2 million, or 10%, of any international equity issue.

Other important market developments last year included the crash in the market for perpetual floating rate notes. One of the fastest-growing sectors of the market in recent years, this source of primary capital for banks is now all but shut down.

Many investors that have turned away from floating rate notes have turned toward another American import: mortgage securities. The international mortgage market continued to develop in 1986, with U.S. houses such as Salomon Brothers introducing European investors to such exotica as collateralized mortgage obligations. The Euromarkets last year also saw the first securities backed by auto loans and credit card receivables.

Such "set-backed" securities will be a major growth area of the Euromarkets in 1987, experts said.

Thus, the Euromarkets will see growth in 1987, but in selected areas.

Profitability in commercial paper, Eurobonds, and British government gilts will be thin and will depend largely on the skill of the traders. Fatter profit margins will continue to exist in swaps, where U.S. banks are strong, and in equities, where U.S. banks are very weak.

Overall, however, the markets here should remain vitally important to the international financial system in 1987, and large banks, lacking opportunities in traditional lending, should continue to maintain a strong presence here.

"The securitization process that is driving the markets is irreversible, but the growth rates of the business will slow down," said Mr. Band of Morgan Guaranty.

After all, he said, "you can't grow by 50% a year forever." ■

Noninterest Income Still Key to Earnings Growth

➧ Continued from Page 1

rate paid on 90-day Treasury bills showed a decline of 145 basis points from the beginning to the end of the year, while federal funds, which are overnight loans between banks, and 30-year Treasury bond rates both fell 135 basis points.

The prime rate, however, dropped a full 200 basis points during the year. The prime has traditionally been the interest rate charged on large commercial loans to a bank's best corporate customers. While it is no longer the rate most widely used by banks to price loans, it is an important measure of how much a bank is earning on its interest-bearing assets.

Banks have traditionally made money on the spread between the interest rates on these funding instruments and the rate they receive on loans made with these funds. Because the lending rate, as shown by the prime, fell more quickly in 1986 than the funding rate, as shown by the rates on T-bills, fed funds, and T-bonds, net interest spreads were squeezed.

Banks might be able to combat these narrower interest rate spreads if lending volume picked up, but that does not seem to be in the cards. Cheryl Swaim, an analyst at Oppenheimer & Co., estimated in a recent report that loan growth would remain steady at 8% in 1987.

But the news may actually be worse than that for many banks. Ms. Swaim says that real estate loan growth has made up for subpar growth in commercial and industrial loan growth in 1986 in many areas.

Because of the overbuilt real estate market in many major metropolitan areas, this growth should peak in 1987. However, Ms. Swaim says, "the continued growth in real estate loans in light of market conditions has negative implications for credit quality."

Also, consumer loans, which have been strong and which offer banks the highest spreads above their funding costs, have shown signs of slower growth recently.

Inflation Outlook

Money center banks can take some consolation from analysts' predictions that 1987 should bring little, if any, worsening of their funding picture. Most economists are predicting that inflation will remain moderate and interest rates will stay flat.

However, banks may be running out of opportunities to boost their income through noninterest income. In the year that just ended, for example, gains on the sale of investment securities were boosted by a continually strong stock market.

But banks may have used up much of their capacity to take these kinds of gains. Also, observers say that many have gone as far as they can in repricing fees for services.

Therefore, noninterest income in 1987 will have to come increasingly from fee-generating businesses that have been set up in recent years, including nonbanking and investment banking subsidiaries.

Merrill Lynch's Mr. Barkocy says that some regional institutions, which depend heavily on retail deposits for their funding, may get something of a break in 1987. With lower interest rates, several companies found they could lower the rate paid on passbook savings accounts, thereby lowering the cost of funds. Major money center institutions that depend largely on wholesale funding sources won't be able to score as large a benefit from that option.

Another difference between regional and money center net income that also benefits the regionals is the progress banks have made in dealing with loan losses.

Analysts project that at major money center institutions, loan-loss provisions will rise about 10% to 20% for the year, with developing-country debt and real estate loans being some of the largest headaches for lenders.

However, many regional banking firms — those that have avoided too much loan exposure to troubled areas such as real estate or energy — will see asset quality improvingin 1987. This could enable some to slow their building of loan-loss reserves and possibly reroute that money directly into earnings. ■

Memory Bank

Following are the answers to the Memory Bank Quiz on page 4.

1. Chemical Bank, New York. **Jan. 5, page 1 : column 3.**

2. According to A.M. Best & Co., an insurance rating and analytical agency, the main reason was increased premiums, particularly for commercial liability risks. **Jan. 6, 2:1.**

3. W. Frank Badgett, former president of the Bank of Pilot Mountain, was convicted of misapplying more than $2.6 million of bank funds and concealing bank records that would have detailed his interests in loans to Fit-All Sportswear Inc., a manufacturer. (And the answer to the other question is Frances Bavier.) **Jan. 6, 24:1.**

4. The Federal Asset Disposition Association. **Jan. 7, 1:3.**

5. Lincoln Savings and Loan Association, Irvine, Calif. **Jan. 8, 1:4.**

6. According to an attorney for some of the plaintiffs, in many of the buy-sell transactions, State Savings and Loan Association, which was owned by Financial Corp. and later merged into its American Savings and Loan Association unit, acquired land sought by a developer, who originally had approached the thrift for a property loan. After acquiring the land, State then sold it to the developer at a price that typically approximated 50% of the projected profit of the development after completion. The profit was immediately recognized by Financial, the attorney said. **Jan. 8, 2:2.**

7. A Bank of America logo, the letters "FIB" for First Interstate Bancorp, and the universal "no entry" sign. **Jan. 8, 3:2.**

8. The new definition would add preferred stock with a life of more than 25 years to primary capital. But goodwill added to a bank holding company's balance sheet would have to be deducted from capital. **Jan. 9, 1:2.**

9. Mortgages. Without admitting guilt, the Dime agreed to pay a total of $2.4 million to 1,800 customers to settle a class-action suit. The plaintiffs alleged that the Dime had illegally changed the index of their adjustable-rate loans, resulting in higher interest rates on the loans. Separately, later last week, the New York attorney general announced that the Dime would pay a total of $95,000 in fines because of false advertising on its mortgage products. **Jan. 9, 3:2.** ■

6 Home Loan Bank Chiefs' Pay Surpasses the $200,000 Mark

Their Federal Reserve Counterparts Lag Behind

By JIM McTAGUE

Washington Bureau

WASHINGTON — As Congress frets about an administration plan to raise top government salaries above $100,000, the salaries of six presidents of the nation's 12 Federal Home Loan Banks continue to climb above the $200,000 mark they first reached in 1986.

Assuming the presidents get their full 3% raise in 1987, their salaries will range from a low of $190,550 at six of the banks to a high of $216,300 for the presidents of the San Francisco and Atlanta banks, according to data released to the *American Banker* by the Federal Home Loan Bank Board under provisions of the Freedom of Information Act.

In comparison, President Reagan makes $200,000 per year; Vice President Bush, $100,800; Federal Home Loan Bank Board Chairman Edwin Gray, $74,600; and a U.S. Congressman, $74,500. The head of the Federal Home Loan Mortgage Corp., Leland Brendsel, receives $170,000.

Many Items Still Unresolved in Talks To Sell BankAmerica's Schwab Unit

By MICHAEL A. ROBINSON

SAN FRANCISCO — Nearly 60 items remain unresolved in BankAmerica Corp.'s negotiations to sell its discount brokerage subsidiary, Charles Schwab & Co.

The two sides have not reached a tentative agreement, the sources added, and no new meetings between principal negotiators have been set.

Instead, the legal departments of the two companies are attempting to iron out differences so that founder Charles R. Schwab can buy back the brokerage, which BankAmerica bought in 1983 for about $53 million in stock.

The points under discussion are "minor" contingencies, one source said, adding that "no one is a deal-wrecker." Taken together they could derail a final agreement, but both sides expect to come to terms on a deal valued at more than $250 million.

A tentative agreement between the two companies could be reached early next week and submitted for approval to the BankAmerica board at a meeting on Wednesday in San Francisco.

BankAmerica is selling the discount brokerage, the nation's largest, as part of a plan to trim assets by up to $12 bil-

Credit Unions To Get New Rating System

'Camel' Rating Method Will Be Implemented

By JAY ROSENSTEIN

Washington Bureau

WASHINGTON — The government's "early warning system" for keeping tabs on the financial condition and management of the nation's 15,000 federally insured credit unions is about to be overhauled.

The National Credit Union Administration, in conjunction with state supervisors, voted unanimously on Wednesday to implement a program similar to the rating system used by the federal supervisors of commercial banks and thrift institutions. That is the so-called Camel system, which gets its name because it evaluates and rates five different components of an institution's operations: capital adequacy, asset quality, management, earnings, and liquidity.

The current rating system for credit unions includes an evaluation of these five areas, but only an overall "judgmental" rating is assigned to the credit union. National Credit Union Administration officials said that the switch to giving ratings for each of the five components, in addition to an overall rating, will help the government better identify areas of weakness at a credit union.

Officials of that group said the existing one-code system also is more subjective than a "tiered" rating system. They said a change will lead to more uniformity and consistency in evaluations done by state and federal examiners nationwide.

Under the new system, each compo-

Major Regional Banks Around Nation Report Strong Gains

By JOHN P. FORDE

Fourth-Quarter Earnings

NEW YORK — Major regional banks from around the country reported strong fourth-quarter earnings gains Thursday, largely thanks to improved lending volume and strong improvements of income from noninterest-bearing sources.

Allied Bancshares, Houston, was able to report earnings in the fourth quarter after several nonrecurring items, including selling off nearly all of its tax-exempt investment portfolio.

Marine Midland Banks Inc., Buffalo, N.Y., on Thursday reported a 26% jump in fourth-quarter 1986 net income to $38 million, or $1.89 a share, from $30 million, or $1.47 a share, in the fourth quarter of 1985.

Increased lending volume helped Bank of New York Co. to a 14.5% jump in fourth-quarter earnings to $38.5 million from $33.6 million in the same period a year earlier. The company earned $1.12 a share in the latest quarter, up 13% from 99 cents a share in the same period a year earlier.

Aided by earnings from its metropolitan division, First Bank System Inc., Minneapolis, had record fourth-quarter earnings of $54.8 million, or 92 cents per share, compared with net income of $44.7 million, or 76 cents a share, in the comparable 1985 quarter.

MARINE MIDLAND

In a statement, Marine attributed its earnings increase to improved net interest income and revenues from several fee-based businesses throughout the year, and particularly in the fourth quarter, which more than offset higher operating expenses.

Marine also said that the full-year's results reflect its strategy to focus on "higher-return domestic businesses, primarily consumer banking, middle-market banking, and asset-based financing, while at the same time continuing to emphasize reserve strength and loan quality."

Marine said its net interest income on a taxable-equivalent basis for the 1986 fourth quarter was $235.7 million, a 14.2% increase from $206.3 million in 1985's fourth quarter. Included in this jump was $7 million attributable to Westchester Financial Services Corp., which Marine acquired in late September.

Compared with the prior year's fourth quarter, Marine's average loans grew by $1.8 billion, or 11.7%, in the fourth quarter. Average domestic loans grew by $3.1 billion, or 26.1%. The taxable-equivalent net yield on average total assets for the fourth quarter was 4.06%, compared with 3.98% a year earlier.

FIRST BANK SYSTEM

For all of 1986, First Bank System said it had record net income of $202.9 million compared with $166.8 million in 1985.

First Bank Systems' metropolitan division, which consists of its two lead banks and 13 other banks in the

Appeals Court Upholds Limits On Exchange

Ruling Deals Setback to Holders of Mexican CDs

By ROBERT LUKE
West Coast Bureau

LOS ANGELES — Americans seeking to recoup losses on their investment in Mexican certificates of deposit were dealt a setback by the U.S. Court of Appeals for the Ninth Circuit in San Francisco.

The court ruled that the program of exchange controls instituted by Mexico was lawful, and it noted that a state has the right under international rules to make every effort to stabilize its currency in times of financial stress.

San Rafael, Calif., attorney R.J. Wolf, who represents some 2,000 plaintiffs, said he is in the process of asking the full Ninth Circuit Court of Appeals to review the decision of a three-judge panel.

"I am obviously disappointed," Mr. Wolf said. "But I am hopeful that, ultimately, the right decision will be reached either by this court or the Supreme Court." Mr. Wolf said that, in his opinion, thousands of investors lost several hundred million dollars by investing in the Mexican certificates of deposit.

Beginning in 1979, investors were solicited by Mexican banks to buy peso- and dollar-denominated certificates of deposits issued by three Mexican banks, which were privately owned at the time.

But as a result of plummeting oil prices in 1982, the Mexican government lacked funds to repay debts, and it imposed strict exchange controls and nationalized the nation's banks.

In ruling for the defendants, the panel said:

"The courts of this country should not operate as an international deposit insurance company, hauling foreign sovereigns before us whenever disgruntled investors so desire."

The panel said the plaintiffs "chose to purchase both dollar and peso certificates of deposit because of the extraordinary rates of return. The actions of the government of Mexico and the losses they occasioned were within the purview of the risks associated with those potentially extraordinary returns."

Dollar certificates of deposit maturing after nationalization could only be paid in pesos at an exchange rate set by Mexico's central bank. Losses resulted when the pesos, declining sharply in value, were reconverted back to dollars. Peso accounts also sustained losses on conversion.

By imposing the exchange controls and setting the exchange rate, the Mexican government confiscated property in violation of international law, the plaintiffs charged.

The panel, however, disagreed in a Jan. 6 opinion.

"Mexico's institution of exchange controls was an exercise of its basic authority to regulate its economic affairs," it said, affirming a district court decision favoring the defendants, Multibanco Comermex, SA; Bancomer, SNC; and Banco Nacional de Mexico, SA.

"We cannot conclude that the program of exchange controls instituted by Mexico was unlawful," the panel said, observing that "it is a recognized rule of international law that a state has the right to make every effort to stabilize its currency in time of financial stress." ■

Overdraft Proposal May Make Banks Scramble

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — Banks that centralize funds from remote accounts for corporate customers may find themselves scrambling to stay within central bank limits on intraday overdrafts if a new Federal Reserve Board proposal is implemented, an agency staffer said Thursday.

The reason, said Elliott McEntee, associate director for bank operations at the Fed, is that the central bank is proposing to delay until 1 p.m. Eastern time the posting of some automated clearing house payments when it calculates a bank's intraday, or "daylight overdraft," position.

The payments involved are automated clearing house debits, which are currently posted to the originating bank's Fed account at the opening of business. In the automated clearing house system, a debit is created by a bank to move money from another depository institution to itself.

Corporations use the debit transactions to transfer money electronically from a number of regional banks to a central bank account. This process, known as cash concentration, is used to collect, in a centralized account, payments received through a variety of geographically dispersed banks.

"The impact we see," said Mr. McEntee, "is that originators of debits can't use the proceeds until 1 p.m.

"For those banks that originate a lot of cash concentration debits and do a big wire business, it could be a problem."

Corporations use cash concentration to collect funds for short-term investments, which are ordinarily made early in the morning.

Under the new rules, many banks may find themselves bumping up against their overdraft limits, since they won't be able to count the automated clearing house transfers as cash received until in the early afternoon.

The problem for banks will be compounded, Mr. McEntee said, if the Fed lowers its daylight overdraft limits, as it has also proposed, or if it begins charging for overdrafts.

A daylight overdraft occurs when a bank has electronically transferred more money out of its Federal Reserve account than it has received, or when it has wired out more funds than it has received over CHIPS, the New York Clearing House's international funds transfer network.

Such intraday overdrafts are common because banks routinely wire out funds in anticipation of receiving transfers from other institutions later in the day.

Mr. McEntee spoke at a conference on automated clearing house risk sponsored by the National Automated Clearing House Association.

Jacqueline Dout, manager of cash operations for Koppers Co., Pittsburgh, said many companies have not yet had time to to measure the impact of the new proposals on their operations. The proposals were put out last month for public comment.

A major issue, she said, is whether banks will grant their corporate clientele access to funds early in the morning as they do now, or delay access until early afternoon.

Most companies, she said, will probably push for early-morning access. ■

Salaries of Six Home Loan Bank Presidents Top $200,000

➸ Continued from Page 1

that she is not a federal employee.

Bank Board and industry officials further argue that the presidents' salaries are more fairly compared with those of executives at major financial institutions than with those of federal government officials. The reasons, they claim, are that the presidents are hired after national searches and that the Federal Home Loan Banks are self-supporting, deriving income from examination fees and services sold to S&Ls.

"The salaries seem commensurate with the responsibility compared to other private sector banks," said Philip Gasteyer, who directs the Washington, D.C., office of the U.S. League of Savings Institutions. He added that the salaries are approved by the directors of each bank. Some directors come from industry and others are public interest directors.

All raises are subject to Bank Board approval.

The 1987 increase, the smallest in recent years, reflects a decline in the inflation rate, a Bank Board spokesman said. He said it was not a symptom of the new frugality at the Bank Board engendered by news stories and government probes of Chairman Edwin Gray's expense accounts.

Mr. Gray's expenses from 1983 to 1986 totaled in the millions, and the district banks picked up over $300,000 of that tab. He ordered a halt to the district bank expense payments in December, one day after releasing the expense accounts of senior officers to news organizations who had requested the material under the Freedom of Information Act.

Mr. Gray also reimbursed the district banks $24,000 for some of those expenses, including $13,000 used to charter a jet to fly from Indianapolis to California to visit his father, who was gravely ill at the time.

Mr. Gray also accepted expenses from the U.S. League of Savings Institutions and other trade groups. In December, the Office of Government Ethics, which investigated the Bank Board expense accounts, requested that the Justice Department look into the matter, citing its own lack of authority to subpoena trade group records.

The Senate Banking Committee announced that it too would look into the expense pratices of Mr. Gray and former board members.

Richard Pratt, a former chairman of the Bank Board, recalled that during his last year in office, from 1982-83, the salaries of presidents ranged from $85,000 to $125,000, which was paid to the San Francisco president.

Though they may fall short of the salaries of the captains of industry, the paychecks of the Federal Home Loan Bank presidents are significantly fatter than those of their counterparts at the 12 Federal Reserve Banks.

Currently, the president of the Federal Reserve Bank of New York receives the highest salary in the system at $170,800 — $35,200 less than his counterpart at the New York Federal Home Loan Bank and $45,500 less than the highest Federal Home Loan Bank salaries.

The lowest-paid Federal Reserve president is Gary Stern of Minneapolis at $110,000, who worked his way up through the ranks to that position and whose salary is currently under review. He makes $80,550 less than the lowest-paid presidents of the Federal Home Loan Banks.

Directors at the district Federal Home Loan Banks last received pay increases in 1986, according to the Bank Board. The maximum permissible fee for the chairman of the board of directors of each bank rose from $750 to $1,200 per day. Fees for directors attending board or committee meetings

Correction

A story in the Jan. 8 edition of the *American Banker* ("1st Interstate to Refile Takeover Plan with Fed," page 3) incorrectly listed BankAmerica Corp.'s nonperforming loans as $2.17 billion. BankAmerica's nonperforming loans actually were $4.5 billion, and loan-loss reserves were $2.17 billion, at Sept. 30, 1986. ■

Banks Report Strong Results

➽ Continued from Page 1

Fourth-Quarter Earnings

Minneapolis/St. Paul area, earned $187.2 million in 1986, a 24.7% increase from the 1985 level.

These earnings were more than enough to offset losses experienced by the bank's regional division, which consists of 58 banks located in outlying parts of Minnesota, Montana, North Dakota, South Dakota, and Washington.

For the year, the regional division had a loss of $30.3 million. In 1985 the regional division earned $16.4 million. The loss, First Bank System said, reflects a substantial increase in its loan-loss provision and other real estate expenses without sufficient income offsets.

Noninterest income for the year doubled to $737.1 million compared to $315.3 million in 1985, an improvement that the company attributed to large security gains as well as fee income.

Security gains accounted for $401.9 million of the increase and resulted from a "favorably positioned investment portfolio in a declining interest rate environment," according to First Bank System. Without the securities gains, noninterest income would have been up only 6.6%.

BANK OF NEW YORK

For the year, Bank of New York Co. earned $155.2 million, or $4.54 per fully diluted share, up 19.2% from the $130.3 million, or $4.02 a share, in 1985.

J. Carter Bacot, chairman of the holding company, attributed the gain to a 20% growth in average loans during the year as well as improved trust, securities processing, and credit card fees.

As with other major banking companies, Bank of New York was helped in its fourth-quarter earnings by lower federal, state, and local taxes on its portfolio of leveraged leases. Bank of New York said its gain in the fourth quarter of this year was $2.4 million from reevaluating its leases in light of lower taxes.

In 1986, the company's consolidated effective tax rate dropped to 15.1% from 25.1% in 1985. The company said the drop was primarily due to "higher tax-exempt income, a larger adjustment to the leveraged lease portfolio, as well as the effect of capital gains."

ALLIED BANCSHARES

In Houston, meanwhile, Allied Bancshares said that several one-time transactions helped it to show a small profit of $4.1 million, or a dime per share, in the fourth quarter as compared to a profit of $29.9 million, or 72 cents a share, a year earlier.

For the year, the holding company reported a loss of $17.6 million, or 42 cents per share, in 1986 versus a profit of $122 million, or $2.95 per share, in 1985.

During the fourth quarter, Allied sold a substantial chunk of its tax-exempt assets, including virtually its entire portfolio of leveraged leases, which resulted in a $32.9 million loss. But the sale of tax-exempt bonds, combined with some taxable securities, brought a profit of $63.6 million.

Gains in the value of Allied's venture capital investments brought $6.8 million in profits, partially offset by a $3 million loss on other venture capital investments. The company also suffered an expense of $10.4 million from operating, selling, or writing down the value of foreclosed real estate and other assets.

Despite an addition of $39 million during the fourth quarter to Allied's reserve for loan losses, the account fell as the company charged off $47.9 million in bad loans. Real estate accounted for 46% of the loan chargeoffs, followed by 38% from commercial and consumer loans and 17% from energy-related problems.

Allied, though, kept its loan-loss reserve at a steady 2.05% of total loans as the holding company reduced its loan portfolio — from $6.8 billion at Sept. 30 to $6.4 billion at yearend, and a full billion dollars smaller than the end of 1985.

Nonperforming loans increased to $422.3 million, or 6.48% of total loans, at yearend compared to $407.8 million at Sept. 30.

Reporters David LaGesse in Dallas and Lisabeth Weiner in Chicago contributed to this article.

Schwab . . .

➽ Continued from Page 1

lion. The company needs to raise money because of its continuing losses, which totaled $600 million in the first nine months of this year.

The transaction could give the ailing San Francisco-based bank a gain of about $140 million in the first quarter of this year. BankAmerica has covered some of its operating losses by shedding assets, such as the sale last month of its Italian bank to Deutsche Bank of West Germany for $603 million.

A.W. "Tom" Clausen, BankAmerica's chief executive officer, said in an interview published this week that his company is considering the proposals of several prospective buyers besides that of Mr. Schwab. It was not known if Mr. Clausen intended to use the media to put pressure on Mr. Schwab or if the bank is talking seriously with more than one buyer.

A spokesman for the bank said "there is nothing inconsistent" with Mr. Clausen's remarks, and he reported that the bank is close to a tentative agreement with Mr. Schwab.

Sources said the general framework of a deal in which Mr. Schwab would buy back the company for roughly $250 million developed earlier this month. BankAmerica would retain a stake in the firm of between about 10% and 12%, making the transaction worth a total of approximately $275 million.

BankAmerica would not receive equity ownership through common stock. That is because equity participation would make Schwab an affiliate of the bank, and Mr. Schwab wants independence from the troubled parent company.

Mr. Schwab has received the financial backing of his friend George R. Roberts, a partner in the San Francisco leveraged buyout firm of Kohlberg Kravis Roberts & Co., sources said. Mr. Schwab, his senior managers, and employees participating in a profit-sharing plan eventually will become the largest owners in the firm.

BankAmerica decided to sell the discount brokerage last November because the subsidiary is not part of the bank's core business. The bank is restructuring to restore profits and remain independent from First Interstate Bancorp., which wants to buy BankAmerica for $3.25 billion. ■

Salary . . .

➽ Continued from Page 2

rose from $400 to $650 per day.

Along with the salary data, the Bank Board attached considerations it said had a bearing on the levels of bank president compensation.

Among them, the Bank Board noted:

- The Federal Home Loan Banks are operated much like private sector institutions, although they have public responsibilities. Member stockholders expect a market-rate dividend . . . In recent years, the banks have been very profitable.
- The banks are major financial institutions with assets between $5 billion and $33 billion.
- In addition to being bank presidents, the incumbents are also principal supervisory agents.
- Salaries are as much as 100% below those available at private sector institutions of approximately the same asset size.
- Bank president salaries are less than the salaries for presidents at the medium and large institutions they regulate. ■

Quote

When a bank comes back from the brink of financial disaster, its advertising should tell potential customers that it's a responsible, trustworthy institution. But this ludicrous series . . . makes the Continental Illinois bank . . . look like a refugee from television's 'Gong Show.'

Adweek, in its Fifth Annual Badvertising Awards, citing a series of Continental Illinois National Bank and Trust Company of Chicago ads — one of which depicts a spokesman twirling a hoola hoop around his neck to music as an 800 number appears on the screen pushing loan applications. [Page 6]

Some Banking Myths Shattered in '86

By BART FRAUST

NEW YORK — Bankers began to think the unthinkable last year. In the process, they shattered several myths about bank mergers and acquisitions as the aggressive takeover environment common in corporate America began to spread to the previously protected world of banking.

For example, the idea that some banks are too big to be sold was disproved. Eight of the 10 largest domestic bank mergers ever were announced last year, including a pair of billion-dollar deals: the acquisitions of the Crocker National Corp. by Wells Fargo & Co. and of Texas Commerce Bancshares Inc. by the Chemical New York Corp.

Three bank holding companies that had ranked among the nation's 25 largest at yearend 1985 — No. 14, InterFirst Corp.; No. 22, Texas Commerce; and No. 25, Crocker — accepted takeover offers.

And No. 2, the BankAmerica Corp., continues to flee a takeover attempt by the First Interstate Bancorp, destroying another long-held view that no large U.S. bank ever will have to worry about a hostile takeover.

Other notions that came crashing down last year were that acquisitions of healthy thrifts were off limits to bank holding companies, that regulators will block mergers of multibillion-dollar banks in the same market on antitrust grounds, that interstate banking will evolve slowly, and that twice book value is as high as banks will go to buy oth-

Profiting from Mortgage Arbitrages

By SANFORD ROSE

It is very difficult to be a successful mortgage investor without at least a nodding acquaintance with three key concepts: duration, positive convexity, and negative convexity. Duration is the weighted average time to receipt of the mortgage payments, with the weights determined by the present value of each cash flow.

Convexity is the rate at which duration changes in response to a change in the general level of interest rates. Positive convexity occurs when durations shorten as interest rates increase or lengthen as interest rates decrease. Positive convexity induces investor happiness, notes mortgage analyst Alden Toevs of Morgan Stanley.

That's because changes in values are roughly equal to the negative of duration times the change in rates. When rates increase, you want shorter durations because a shorter bond will decline in value by less than a longer-duration instrument.

Similarly, when rates decrease, the investor craves longer durations because a longer bond will rise in value more than a shorter instru-

Administration To Push FSLIC Recapitalization

Officials Warn of Liquidity Problems in Thrift System

By ROBERT M. GARSSON
and NINA EASTON

News Analysis

As Congress prepares to wrestle once more with a plan to save the nearly depleted thrift industry insurance fund, administration officials say the Federal Home Loan Bank System is facing a potential liquidity problem.

If the administration is able to make that case in hearings that begin this week before both the House and Senate banking committees, it could provide a powerful push for its plan to recapitalize the Federal Savings and Loan Insurance Corp.

Moreover, organizations such as the U.S. League of Savings Institutions, which the administration holds responsible for scuttling the FSLIC rescue plan last year, could find themselves under new pressure to support the $15 billion recapitalization.

Critics Assail Thrift Appraisal Rule
Page 3

The administration is not arguing that the 12 district banks which make up the system have lost the ability to raise cash.

Instead, senior administration officials are saying that troubled thrift institutions no longer have assets that can be used to back loans from the district banks.

The advances have been used to keep otherwise insolvent thrifts in business while the industry insurance fund awaits a cash infusion. The FSLIC has about $2.5 billion in reserves, but it would run down to zero very quickly if it began liquidating or merging even a small number of the insolvent institutions it insures.

Big Deals: Banking Joins World of Tough Takeovers

Continued from Page 1

er banks.

"There has been a complete change in antitrust attitudes, and with the natural tendency toward monopoly, transactions that were unthinkable five years ago can be done today," said John Lyons, a principal with Lyons, Zomback & Ostrowski Inc., a New York bank and thrift consultant.

In addition, the bull market in bank stocks during the last few years created an environment in which banks could do megamergers without seriously cutting into their earnings per share, Mr. Lyons said.

The landmark Supreme Court decision in June 1985 permitting regional interstate banking also was a major factor. Of the 20 biggest deals of the year, 12 were interstate transactions.

Bankers' Attitudes Changing

Bankers' attitudes about mergers also are changing. "Today's banker feels that almost anything is possible," Mr. Lyons said. And that includes hostile takeovers of giants such as BankAmerica.

"Hostile takeovers occur throughout the corporate world," he added. "There is a feeling that this is your right as a corporate citizen."

Managements of industrial companies now operate in an environment in which, if they make a mistake, corporate raiders are standing by ready to pounce on them.

Banking, too, is headed in that direction. "It's happened already," Mr. Lyons said. "The major entrepreneurs are heavily involved in banking through their ownership of savings and loans, and it has created a real problem for the S&Ls."

The acquisition of healthy thrifts is another area where bankers broke new ground last year. Previously, it was thought that thrift acquisitions were off limits to bank holding companies under federal law except in cases of failing thrifts. Citicorp entered Florida, California, Illinois, and Washington, D.C., through this kind of transaction.

In 1986, though, bank holding companies began to acquire healthy thrifts in a complex process that actually boils down to one simple idea — convert the thrift to a bank and then acquire the converted institution.

The Federal Home Loan Bank Board, concerned about losing its healthiest members, moved to block these deals by requiring the participants to pay hefty "exit fees" and then subjecting the deals to its prior approval. Barnett Banks of Florida, Jacksonville, went to federal court in Jacksonville and obtained a temporary restraining order against the Bank Board. Barnett completed the acquisition without Bank Board approval.

"These deals won't be attractive to every bank, to every thrift, in every market," said Thomas Vartanian, a partner at the Washington law firm of Fried, Frank, Harris, Shriver & Jacobson.

"Too many moons have to be in line," said Mr. Vartanian, a former general counsel to the Bank Board and one of the architects of these arrangements.

He added that he expects the Bank Board to seek aid from Congress on the matter and that the issue will be resolved with the buyers paying some kind of monetary compensation to the agency.

Sees Banks Acquiring Mutuals

Barring congressional action, Mr. Vartanian said, he sees no more than a dozen bank-thrift deals a year, with the bulk being bank acquisitions of mutuals. By buying mutuals, a bank could pay the Bank Board's exit fee without having to worry about compensating shareholders of the acquired company, he said.

Another notion that has been invalidated is that interstate banking will evolve slowly from regional to national banking. "Nationwide banking is coming faster than most believed even as recently as a year ago," said bank analyst William Weiant, in a recently published research report for the First Boston Corp.

Forty-one states and Washington, D.C., now have some form of interstate banking legislation on their books. Of these, nine have national banking laws and another nine have a trigger date for interstate banking.

"By early 1989, New York banks will have the opportunity to make acquisitions in 14 states, including many of significant size such as Ohio and Michigan, as well as opportunities to enter faster-growing markets, primarily in the West," Mr. Weiant said.

Last year, New York banks began their nationwide acquisition moves. Chemical New York Corp. soon will be operating in Texas through the acquisition of Texas Commerce. By 1988, it probably will be able to complete the acquisition of the Horizon Bancorp, Morristown, N.J., in a deal also announced last year.

By 1989, Marine Midland Banks Inc. should be operating in Pennsylvania through the acquisition of First Pennsylvania Banks Inc., Philadelphia, in a transaction announced in 1986. In October, Citicorp and Chase Manhattan were able to complete their proposed Arizona bank acquisitions.

Twice the book value used to be the ceiling for bank acquisitions; it rapidly became the floor in 1986.

Although three mammoth acquisitions were announced at prices representing book value or less (Wells-Crocker, Chemical-Texas Commerce, and RepublicBank Corp.-InterFirst Corp.), banking mergers and acquisitions were set at prices representing substantial premiums to book value.

For the 302 bank and thrift acquisitions included in the *American Banker's* universe of "big deals," the average multiple to book value was 1.7 and the average multiple to earnings was 16.8. For the first nine months of the year, the deals were priced at an even twice book value, but the average for the year was lowered by the Chemical-Texas Commerce and RepublicBank-InterFirst deals, both announced in December.

Many Big Deals Higher-Priced

Many of the biggest deals of the year were priced well in excess of twice book. First Union Corp., Charlotte, N.C., bought First Railroad & Banking Co., Augusta, Ga., for about 2.4 times book; SunTrust Banks Inc., Atlanta, got the Third National Corp., Nashville, for 2.3 times book; the PNC Financial Corp., Pittsburgh, won the Citizens Fidelity Corp., Louisville, Ky., for 2.6 times book; Midlantic Banks Inc., Edison, N.J., lured the Continental Bancorp, Philadelphia, with an offer worth 2.2 times book; and the Banc One Corp., Columbus, Ohio, attracted the American Fletcher Corp., Indianapolis, with 2.4 times book.

Sometimes, however, even well in excess of twice book value is not enough to hook the big fish. In July, the Fleet Financial Group, Providence, R.I., offered the Conifer Group Inc., Worcester, Mass., about 2.6 times book. The following month, Conifer accepted a rival offer from the Bank of New England Corp. worth over three times book. Former shareholders of the Patriot Bancorp, Boston, probably were the happiest about the deal. In January, they accepted an offer from Conifer worth 2.4 times book and, after the Bank of New England deal, they recorded one of the quickest and most lucrative "double-dips" in banking history.

The following are some other conclusions gleaned from the 1986 deals:

- In every region of the nation, interstate deals on average were priced at higher multiples to book value and earnings than in-state deals.
- Differences in pricing between interstate and in-state deals is greatest in the Southeast.
- The highest premiums, whether for in-state or interstate deals, are available in the Northeast.
- The lowest are available in the West.
- The greatest merger activity took place in the Midwest, closely followed by the Southeast.
- Thrifts cost less to buy than banks on average.

Dear Reader, How Are We Doing?

The American Banker wants very much to make sure its coverage of the financial services industry meets your information needs. So would you spend a moment to give us some feedback on the statistical tables that appear in today's survey of the **Big Deals of 1986**? Over the past year we have incorporated many of your suggestions to provide more meaningful information. Please return this questionnaire to William Zimmerman, Editor, American Banker, One State Street Plaza, New York, N.Y. 10004. Telephone 212-943-5712.

1. How would you **change** the tabulation to make it more useful? What would you add?

____

____

2. What do you like **best** about this tabulation?

On the Expanded Bank Powers Issue, Lawmakers Are Caught Between Sides

Continued from Page 16

control functions of the Federal Reserve.

Currently, banks that fund their loans with deposits have the ability to create money simply by extending new loans.

The Federal Reserve controls this money creation process by requiring banks to set aside a fraction of their deposits as reserves. The reserve requirement determines the amount by which any given amount of bank reserves can be "multiplied" by the private banking system. For example, with a 20% reserve requirement, a dollar of bank reserves can be multiplied through a process of lending and relending to a maximum of $5.

My proposal would reduce the money multiplier to the extent existing banks were converted to financial holding company depositories; because they could not themselves extend loans, they also could not create money. Uncertainty about the number of conversions would introduce uncertainty about the money multiplier itself, further eroding the usefulness of monetary aggregates as targets for monetary policy makers. A 10-year transition rule for converting existing commercial banks to the equivalent of money market funds would smooth much of the disruption in the money multiplier that these conversions otherwise would cause.

Several criticisms of the proposal can be anticipated. perhaps the strongest objection is that separation of deposit-taking and lending activities would lead to increased interest rates on commercial and consumer loans, since lending subsidiaries would be forced to rely on uninsured debt and equity rather than on less-expensive, federally insured deposits.

The amount of any increase would depend, in significant part, on the number of banking organizations that converted their status. Many banks, including smaller institutions exempted from the separation requirements, would choose to remain as they are, funding their lending activities by insured deposits. These conventional banks would constrain the abilities of financial holding company lending subsidiaries to charge significantly higher interest rates.

One way to prevent consumer loan rates, in particular, from increasing would be to permit financial holding company-owned depositories to extend consumer loans. This variation would be equivalent to the recent proposal offered by the Treasury Department to permit any type of company to own and operate a "consumer" bank.

Although thus far it has been opposed by Federal Reserve Board Chair-

An Idea: Financial Holding Firms to Split Deposit Taking, Lending

Continued from Page 21

man Paul A. Volcker, who fears the consequences to the financial system of eliminating the distinction between banking and commerce, the consumer bank proposal has the political advantage of appearing less radical than requiring financial holding companies to separate *all* their lending operations from their deposit-taking activities. However, because it would be less far-reaching, the consumer bank concept also could fall short of meeting the concerns of those opposed to broader bank powers.

For example, although a consumer bank could be insulated totally from any nonbanking affiliates, it still could prop them up indirectly by extending loans to their *customers.* Banks affiliated with retailers could favor customers of those retailers in extending loans. A depository restricted to investing in high-quality marketable instruments could not exploit this potential conflict of interest.

Moreover, given their ability to fund consumer loans with insured deposits, financial holding companies that owned consumer banks could grow larger than those that owned lending affiliates that had to rely on uninsured sources of capital. For those concerned about the effects of deregulation on the concentration of assets, therefore, the consumer bank proposal should be less attractive than separation of lending and deposit-taking services.

Another possible objection is that few, if any, banking organizations would choose to operate as financial holding companies, given the severity of the separation requirements.

Of course, there is, no way to test this proposition without making the financial holding company option available. Nevertheless, it is highly likely that many large banking organizations — as well as certain nonbanking companies — would consider the idea seriously.

The financial holding company option would allow participants to obtain the benefits of portfolio diversification and to cross-sell each of the services and products offered by all of the nonbank affiliates, the principal reasons why banks in particular have sought greater financial product-line freedom. And while it is true that financial holding company lending affiliates would have to pay more for their funds than conventional commercial banks, there is ample room in the credit markets to accommodate them.

The strong success of General Electric Credit, currently one of the 10 largest commercial lenders in the United States, proves that access to insured deposits is not a necessary condition for competing in the commercial lending business.

A final potential objection is that although Congress clearly would need to enact new legislation to authorize the unrestricted ownership of consumer banks, creating the financial holding company option may be unnecessary because there is nothing in existing law that prevents banks or their holding companies from shedding their loan portfolios and converting their depositories into money market funds.

This observation is true but misses two important facts.

First, it is unclear whether a national bank currently engaged in both deposit-taking and commercial lending legally could retain its bank charter if it were to shed its entire loan portfolio. (This issue may be resolved in the current litigation pending in a Florida federal district court involving a challenge to the Comptroller's authority to issue charters to nonbank banks.) Second, and more important, banking organizations have little incentive to incur the expense of restructuring their banks as long as they believe that Congress at some point in the near future will widen their financial product-line authority without requiring the separation of their payments and lending activities.

If my projections about the future political environment are correct, however, federal lawmakers will continue to be reluctant to intervene in the war between banks and other financial interests. As a result, banks more than likely will have to wait until the liberalizations of state bank charters induce Congress to level the playing field for national banks and bank holding companies.

By that time, the competitive positions of banks will be eroded even further. If banks instead were to fight for the financial holding company option, they might be able to allay the concerns of those who have opposed bank powers and thereby hasten the removal of the remaining impediments to product-line competition in the financial services industry. ■

State Street Bank Wins $20 Billion Pension Fund

BOSTON — State Street Bank & Trust Co. announced that the California State Teachers Retirement System has chosen it as master custodian for the state's $20 billion pension fund.

The California system, which has 415,000 members, is the fifth largest public pension fund in the country. Frank Russell Co., Tacoma, Wash., has been its custodian.

State Street is the largest master custodian, now with nearly $140 billion in such assets, including nearly $50 billion in public pension assets. ■

FSLIC Sues Thrift's Former Officers

Special to the American Banker

LOUISVILLE, Ky. — Federal regulators are seeking nearly $30 million in damages from three former officers of the Lincoln Federal Savings and Loan Association and two brokerage firms for their involvement in a futures trading plan that led to financial trouble for the thrift.

The suit, filed in federal district court in Louisville; names George E. Ritter, who resigned as the chairman and chief executive officer in November 1985; Jack P. Spradlin, who resigned as the president on May 31, 1985; and Kenneth C. Dowell, who resigned as the treasurer and vice president on May 31, 1985.

An attorney for Mr. Ritter declined to make a statement. Mr. Dowell and Mr. Spradlin could not be reached for comment.

Also named in the suit were E.F. Hutton & Co. and an account representative in its Louisville office, C. Dadley Sponcil; and Geldermann Inc., Chicago, and two of its employees, Thomas J. Dickinson and Robert C. Campbell.

Both firms said they would respond in court to the allegations and had no comment at present. All those named in the suit have 20 business days to file their response.

The futures trading — which took place from Dec. 1, 1983, through June 6, 1985 — led to a loss of more than $29 million, according to the lawsuit. The suit also seeks punitive damages in an amount to be determined when the case is heard on a date still to be set.

Lincoln Federal filed the lawsuit on Dec. 29, a day before Lincoln merged into the First Nationwide Bank of San Francisco, the nation's seventh largest thrift. The Federal Savings and Loan Insurance Corp. is prosecuting the suit.

The merger — sought by federal regulators — ended a yearlong search for a buyer for the Louisville thrift.

Any damages recovered by the lawsuit would be turned over to the FSLIC, which provided an estimated $75 million in financial assistance to encourage First Nationwide to acquire Lincoln Federal.

Charges in the suit include negligence, fraud, and a breach of fiduciary duties. According to the suit, the thrift's officers, encouraged by the brokers, used the savings and net worth of Lincoln's depositors "to gamble in the financial futures market." The officers believed that interest rates would rise and viewed the futures market as a quick way to raise money for the thrift. Interest rates declined, however, creating substantial losses at Lincoln Federal.

The suit charges that the futures transactions "constituted an enormously risky, grossly improper, imprudent, unsafe, and unsound practice and resulted in the total elimination of Lincoln's net worth, placing Lincoln in an unsafe, unsound, and insolvent condition."

The suit also alleges that the futures program included frequent trading that did not promote a rational hedging strategy but instead generated large commissions for the brokers. ■

Thrift Chairman Killed in Car Crash

West Coast Bureau

LOS ANGELES — The chairman and owner of the North America Savings and Loan Association was killed in a freeway crash last Friday — the same day state regulators declared the Santa Ana-based thrift insolvent and placed it in conservatorship.

Duayne D. Christensen, 56, was killed Friday morning when his car hit a freeway abutment as he sought to avoid other cars, police said.

Mr. Christensen, a physician, was the sole common stockholder of North America Savings, which had assets of $219 million at Nov. 30. The thrift, which opened in 1983, had losses of $9 million in the first 11 months of last year, according to William D. Davis, chief deputy commissioner of savings and loan, who was named conservator.

Mr. Davis declined to specify why the thrift failed.

"We are still in the investigative mode, trying to uncover what went wrong."

But Mr. Davis blamed last year's $9 million in losses largely on real estate investments. He said state regulators had pressed the thrift for more capital since last June. A deadline for additional capital expired at noon Friday. The thrift was seized that afternoon.

Mr. Davis said Mr. Christensen was not told of the department's impending action. Federal thrift regulators were notified Friday, said a spokesman for the Federal Home Loan Bank of San Francisco.

North America's offices remained open yesterday, a bank holiday.

Mr. Davis said North America's present management, including president Brooks A. Miller, will continue to run the institution. ■

Four More Bank Failures Bring to Eight Number of Closures So Far This Year

By PAUL TOSTO

Washington Bureau

WASHINGTON — State regulators and the U.S. Comptroller's office shut down four banks last Thursday, doubling to eight the number of bank failures this year.

Officials at the Federal Deposit Insurance Corp. said that all deposits were covered in each of the actions.

In Latimer, Iowa, state regulators closed the Latimer Bank & Trust, an agricultural bank with $23 million in assets. Its three offices reopened on Friday as branches of the First National Bank of Clarion. Clarion took over about $21.9 million in 3,400 deposit accounts and will pay the FDIC a purchase premium of $121,000. Clarion also will purchase $15 million of the failed bank's loans and other assets.

The FDIC will take over about $8 million of Latimer's remaining assets and will advance $6.8 million to Clarion to help with the takeover.

Latimer was the first bank in Iowa and the second agricultural bank in the nation to fail this year. The State Bank of Cuba, in Cuba, Ill., with $17.5 million in assets, failed on Jan. 8.

Also last week, the Comptroller shut down two national banks in Oklahoma with assets totaling $28 million.

Deposits of the First National Bank of Rush Springs, in Rush Springs, Okla., were taken over by the First National Bank of Maysville, in Mayville. The failed bank's one office reopened on Friday. The failed agricultural bank held assets of $12.9 million and deposits of $12.5 million in about 3,000 accounts.

In Skiatook, Okla., the First National Bank of Skiatook closed. It reopened Friday as a branch of the American Exchange Bank, Collinsville, Okla. The Skiatook bank held assets of $14.8 million and deposits of $13.8 million in 2,500 accounts. American Exchange purchased $9.5 million of the failed bank's assets. The FDIC will advance $4.1 million to American and retain Skiatook assets of about $5.3 million.

On Jan. 8, the Security National Bank and Trust Co., Norman, which held $204.5 million in assets, became the first Oklahoma bank to fail this year.

In Colorado, the First Charter Bank of Denver, a $9.5 million institution, was closed last Thursday. Century Bank, based in Denver, purchased $6.3 million of the failed bank's assets, with the FDIC retaining the rest. First Charter held deposits of about $9 million in 1,900 accounts and was the second Colorado bank to fail this year.

With eight bank failures in two weeks, regulators do not expect the problems of the last four years to lessen.

"We don't expect to see a decrease in the number of failures" in 1987, said Lee Cross, a spokeswoman for the Comptroller.

The number of bank closings in January may be disproportionately high. Sometimes, regulators will postpone closing a bank until after the holiday season.

Last year, 138 banks across the United States failed, and 120 failed in 1985. ■

NY Public Pension Funds Can Invest in State Notes

Special to the American Banker

ALBANY, N.Y. — Public pension funds can continue to invest in notes and other interest-bearing obligations of the New York State Business Development Corp. until Dec. 31, 1988, under a new law signed by Gov. Mario M. Cuomo.

According to Gov. Cuomo, the state comptroller has agreed to invest $100 million in the corporation to assist in fulfilling its statutory mandate to stimulate business activity, maintain economic stability, and create jobs for New Yorkers.

"The bill will insure that funds become available to package financial assistance for small and medium-size businesses, particularly the minority and women-owned sector of the small-business community," said Gov. Cuomo. ■

Suit Brings Shoreline Savings Loss; Other Western Firms Report Earnings

West Coast Bureau

LOS ANGELES — Several West Coast financial institutions, including H.F. Ahmanson & Co. and U.S. Bancorp, reported record earnings in the fourth quarter and in all of 1986.

But Shoreline Savings Bank, Seattle, reported a loss of $4.4 million, or $2.93 a share, in its fiscal second quarter, largely as a result of the settlement of a lawsuit against the bank by a major borrower that declared bankruptcy in 1984.

"Since that time, a variety of suits have arisen seeking to avoid liens, recover property in the bank's possession, restrict the bank's access to properties, and receive unspecified damages," Shoreline said in a statement.

In all, Shoreline boosted its loss reserve by $6.9 million in the quarter, including $2.9 million resulting from settlement. It said it had operating earnings of 600,000.

The quarterly loss compares with a loss of $1.2 million, or 80 cents a share, a year earlier. In the six months, Shoreline said it lost $4.7 million, or $3.12 a share, as opposed to losses of nearly $3 million, or $1.99 a share, a year earlier.

"Settlement of this litigation removes a major contingency from the bank, frees up assets, and allows us to move forward," said Lee Hare, president of the institution, which reported assets of $421 million and net worth of $8.9 million as of Dec. 31.

Ahmanson, the parent of Home Savings of America, said fourth-quarter profits rose 17% to a record $80.3 million, or 82 cents a share, from $68.9 million, or 82 cents a share, a year earlier. In all of 1986, earnings climbed 37% to a record $303.6 million, or $3.22 a share, from $220.8 million, or $2.63 a share, in 1985.

"Nearly $6 billion of loans and mortgage-based securities were sold," said Richard H. Deihl, chairman and chief executive officer of the Los Angeles-based company, which had $27.6 billion in assets as of Dec. 31. "Loan servicing revenues more than doubled. Deposit inflows exceeded $2 billion. Money costs were reduced to below 7%."

Ahmanson said it lost $18.6 million on the sale of certain insurance operations last year.

At U.S. Bancorp, Portland, Ore., fourth-quarter profits rose 12% to a record $21 million, or 69 cents share, from $18.8 million, or 63 cents a share, a year earlier. In the full year, the parent of U.S. National Bank said earnings advanced 16% to a record $77.2 million, or $2.56 a share, from $66.2 million, or $2.22 a share, a year earlier.

"Net interest income finished the year strongly as loan growth advanced late in the fourth quarter," said John A. Elorriaga, chairman and chief executive officer of the company, which had assets of $9.49 billion as of Dec. 31. "Solid gains were achieved in noninterest revenue, while noninterest expense was tightly controlled and virtually flat from the previous year."

U.S. Bancorp said nonperforming assets declined to $148.8 million at year-end, the lowest level in more than four years.

Among other western financial institutions reporting results, Bancorp Hawaii Inc., the state's largest financial institution, said fourth-quarter profits advanced 15.7% from a year earlier to $11.9 million, or $1.30 a share. In the full year, profits increased 19.8% to $46.2 million, or $5.07 a share.

The parent of Bank of Hawaii, with assets of more than $5 billion, attributed the improved results to a stable interest rate environment, asset growth, and "continued management emphasis on reducing nonperforming loans and controlling operational costs."

Also in Honolulu, First Hawaiian Inc. said fourth-quarter profits increased 1.3% to $8.1 million, or 60 cents a share; and climbed 13.2% in the full year to $30.8 million, or $2.30 a share. The parent of the state's second largest financial institution, First Hawaiian Bank, with more than $3 billion in assets, also cited an increase in interest-earning assets, noninterest income, and a low, stable interest rate environment for the improved results.

At Westamerica Bancorp., San Rafael, Calif., fourth-quarter profits increased 153% from a year earlier to $2.85 million, or $1.08 a share, and climbed 61% in the full year to $8.6 million, or $3.33 a share.

Westamerica, with assets of $1.18 billion, attributed the improved performance to its "ability to build high-quality earning assets on a strong capital base while gradually shrinking operating expense ratios."

Westamerica, which is being pursued by Security Pacific Corp., with which it is holding talks, said it expects to surpass last year's 0.80% return on assets and also expects to achieve "another year of double-digit growth in loans and deposits." ■

Robert Morris Opens Houston Office

By A. JOSEPH NEWMAN JR.

PHILADELPHIA — Robert Morris Associates, the trade organization of commercial lenders that is headquartered here, said it opened an office in Houston, its second regional office, as part of an effort to provide more local and regional educational offerings to members.

Regional executive Ann Spillane had been public affairs director at RepublicBank Houston. The new Southwest regional office covers Arizona, New Mexico, Texas, and Rocky Mountain chapters.

In 1985, Robert Morris Associates opened a Southeast office in Atlanta, headed by Karen Tinley, which covers Louisiana, Arkansas, Florida, Georgia, Alabama, Tennessee, and Mississippi. The organization plans to open additional offices across the country, but no timetable was given.

Malcolm T. Murray Jr., national president, told a press gathering that Robert Morris is seeking to educate members to be "sensitive . . . aware" of the need to understand the risks of accepting collateral that might turn out to include contaminated plant sites and hazardous industrial operations.

Mr. Murray, who is executive vice president of the First Union National Bank, Charlotte, N.C., a unit of the $27 billion-asset First Union Corp., suggested that banks consider naming "resident experts" or "environmental bankers," either part time or full time.

As part of its efforts, Robert Morris Associates for the first time will devote a full session to environmental problems at its annual conference in Hawaii in November. ■

Germantown Savings Plans Stock Conversion

Special to the American Banker

PHILADELPHIA — The board of managers of the $1.4 billion-asset Germantown Savings Bank approved a plan to convert from a mutual to a Pennsylvania-chartered stock savings bank, subject to regulatory approvals.

The legal name of the 132-year-old bank is Saving Fund Society of Germantown and Its Vicinity.

No details were given on the amount of capital to be raised through the sale, or the price of the stock. Shares not subscribed to by depositors and the community will be sold in a public offering by an unnamed underwriter.

The conversion would leave only one mutual savings bank in Philadelphia — Beneficial Mutual Savings Bank.

Germantown's net worth of $41.5 million at yearend 1986 was up from $35.4 million at the end of 1985, indicating earnings of around $6.1 million. A net worth ratio of 2.95% included $17,680,000 in Federal Deposit Insurance Corp. net worth certificates.

➻ Continued from Page 19

Will the acquisition wave continue?

One school of thought expects a significant drop in activity at least until the national triggers in several states take effect beginning in 1988. Mark Alpert, a bank analyst at Bear, Stearns & Co., noted that in recent months, the stock prices of large regional banks have fallen 15% to 20% from their 1986 highs as investors began to show their wariness about the effects of the bank merger wave. At the same time, sellers continue to expect high acquisition prices.

"Unless big banks' stock prices go up or smaller banks lower their price expectations, I think there will be a drop-off in activity," he said.

In contrast, Bradford M. Johnson, a bank analyst at Johnson, Lane, Space, Smith & Co. in Atlanta, said he believes that the recent decline in bank stock prices will cause acquisitions to be priced more reasonably and thus spur merger activity this year. ■

Give Banks New Powers, Volcker Asks Congress

Fed Is Ready to Act on Pressing Issues If They Do Not, He Warns Lawmakers

By ROBERT M. GARSSON and JAY ROSENSTEIN

Washington Bureau

WASHINGTON — Warning that the central bank is ready to act if Congress does not, Federal Reserve Board Chairman Paul A. Volcker again asked Congress to permit banks to underwrite mortgage-backed securities, municipal revenue bonds, commercial paper, and mutual funds.

"The four powers I mentioned are on the table at the Federal Reserve Board," said Mr. Volcker on Wednesday, alluding to a Feb. 3 hearing scheduled to consider applications from three banks to engage in underwriting.

"You cannot evade that," he added.

Mr. Volcker was making his first appearance of the year before Congress, as the Senate Banking Committee opened three days of hearings on financial industry issues. Across Capitol Hill, the House Banking Committee also opened hearings on a bill to recapitalize the Federal Savings and Loan Insurance Corp.

The Senate panel is studying that bill, as well as bills to grant banks limited securities underwriting powers, to close the nonbank-bank loophole, to permit regulators to merge failing institutions across state lines, and to limit check holds.

Attempting to highlight the importance of the so-called regulators' bill, which would permit interstate mergers of failing banks, the chairman of the Federal Deposit Insurance Corp. warned that the insurance fund could lose money this year as a result of an expected "sizable increase in bank failures." In 1986, 138 FDIC-insured banks were closed.

It would be the first loss in the FDIC's history, said L. William Seidman, the agency's chairman, after his testimony be-

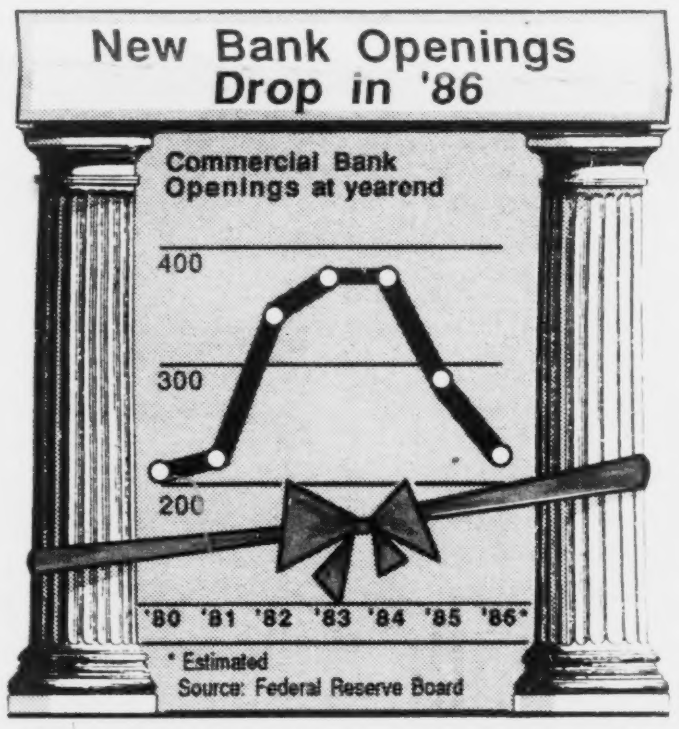
Fewer Commercial Banks Opened for Business in 1986

By KENNETH J. HICKS

NEW YORK — The number of commercial banks that opened last year plummeted by 22% from 1985, according to an *American Banker* survey.

Complete figures were not available from regulatory agencies, but the survey estimated that 217 banks opened last year, compared with 280 in 1985. That is the lowest number since 1980, when 205 banks opened their doors.

Today the *American Banker* publishes a table listing financial institutions, including thrifts and credit unions, that opened in the first half of 1986. The table begins on page 8. A listing for the second half of last year will be published on July 10.



* Estimated
Source: Federal Reserve Board

Complete data on the number of thrifts that opened last year was not yet available, but according to the Federal Home Loan Bank Board, 15 federally chartered thrifts opened in 1986, down from 29. In 1985, almost 400 financial institutions overall opened for business.

After rising steadily through the 1980s, the number of bank openings declined in 1985 after the Comptroller of the Currency adopted a policy requiring that proposed banks have a chief executive officer in place before an application can be approved.

The Comptroller's office maintains that the policy helps it judge a bank's chances of success, noting that management is "a critical component of the charter application."

But opponents contend that the change makes it more difficult to organize a bank, because few CEO candidates are willing to commit themselves to an uncertain venture.

Another reason for the slowdown in

New Banks: Page 6 ➸

New York Charters Of Financial Firms Set Record in 1986

By JAMES R. KRAUS

NEW YORK — The number of charters granted to financial institutions by the New York State Banking Board in 1986 topped the previous year's record, and signs show that the number in 1987 will continue at the same level.

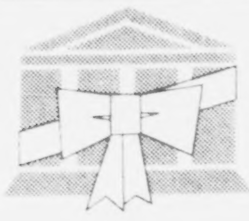
The surge in new banks has been spurred by a liberalization of state banking laws and by the spread of financial institutions owned by minorities and members of various ethnic groups.

"We haven't had these kinds of numbers in decades," said one banking board official.

Based on the number of applications now being discussed and likely to be submitted, he predicted that a large number of charters is likely to be granted in 1987, continuing a trend that began in 1985.

A total of 25 banks and other financial institutions were chartered by the

New York: Page 16 ➸



Last Year's Crop of New Banks Was Smallest in 6 Years

➻ Continued from Page 1

bank openings is market saturation. A Phoenix-based consulting firm pointed out that the Phoenix-Tucson, Ariz., area is already saturated with financial institutions. Two commercial banks opened their doors in Arizona in the first half of 1986 following the opening there of three commercial banks and one savings and loan in the second half of 1985.

"It's harder for an independent bank to compete unless it is a community bank," geared to serving a specific community or market segment, a spokesman for the firm said.

For instance, in New York State, 25 financial firms were chartered by the state banking department in 1986. While the number was up from 23 in 1985, six of the banks were set up specifically to serve ethnic communities.

In addition, DeltaBank, New York, which opened on March 17, describes itself as a "client-oriented" bank. "This means we're structured as a 'relationship bank' serving selected clientele . . . who desire personal service and attention."

The bank, founded by "prominent Latin American businessmen and international bankers," advertises "innovative yet prudent banking approaches" and offers a variety of financial services, including lines of credit, brokerage, asset management, and corollary services, such as courier services and international investment advice.

Peoples National Bank in Easley, S.C., opened on Aug. 7, 1986, in a town of 18,000, "in competition with six other financial institutions," said Robert E. Dye, the bank's president.

Since opening with $3.5 million of initial capital, the bank has attracted $13 million in deposits and $8 million in loans. Mr. Dye believes this is primarily due to consumers' desire for the flexibility and responsiveness of a community bank.

"They will go to the banker they know," Mr. Dye said.

While negative economies in the farm states may contribute to a slowdown in new bank openings there, a survey by the Federal Reserve Bank of Kansas City pointed out that most new banks open in metropolitan areas.

In its 1986 annual statistical supplement, the reserve bank noted that of the 552 banks that have opened in the 10th District since 1970, 60% were in metropolitan areas.

Further, the study said, "By their sixth year of operation, most de novo banks concentrate either on consumer lending (40%) or commercial and industrial lending (37%). Only 18% concentrate on real estate lending, while a mere 5% concentrate in agricultural lending."

The South and Southeast continued to be areas of expansion for new financial institutions, with Florida leading the way. Forty-one new financial firms opened in the South, 17 of them in Florida. Among the new institutions in Florida are Brown Brothers Harriman Trust Company of Florida, Naples, and Chase Bank of Florida NA, St. Petersburg, subsidiaries of two well-established New York banking companies.

The south Florida and Atlanta markets have been identified as prime growth areas into the 1990s.

Despite the slowdown, officers of new banking companies say they believe there may be a retrenching at the community level because of the desire for more personalized service.

Mr. Dye commented, "I feel that the response to our new community bank is very similar to the response occurring for other newly organized banks . . . and continues to flag a great deal of preference on the part of the consumer for the smaller, more personal, community-type bank." ■

New Financial Firm Listing Drawn from Variety of Sources

The *American Banker* listing of new financial institutions was compiled from several sources.

The commercial bank listings were drawn from data supplied by the Comptroller of the Currency, the Federal Reserve Board, state banking departments, and individual new banks.

The thrift listings were compiled from data supplied by the Federal Home Loan Banks, state savings and loan departments, and individual new thrifts.

The credit union listings were compiled from data published by the National Credit Union *Administration*.

The institutions are listed by name and city. The second line of the listing has the mailing address, followed by the zip code. The third line has the name of the president of the institution, followed by the telephone number.

The *American Banker* will continue to publish listings of new financial institutions periodically. While every effort is made to compile as complete a list as possible from the sources listed above, some institutions may be missed.

Any institution that wishes to be included in future listings should send the following information to the *American Banker*: name of the institution, mailing address, phone number, the date opened, initial capitalization, and the name of the president.

The information should be sent to Kenneth J. Hicks, Statistician-/Reporter, *American Banker*, One State Street Plaza, New York, N.Y. 10004.

Strategic Dates

Jan. 1, 1987

IN THE BIG LEAGUES: Effective today, small-sized mortgage lenders will be able to sell their contracts to institutional investors by batching, or pooling mortgages together in minimum amounts of $250,000. Initially, only 30-year conventional mortgages not more than 12 months old will be eligible. The new Federal National Mortgage Association marketing tactic will open up the market to smaller mortgage banking firms. Currently, most mortgage pools now offered for sale are in the $1 million range.

The last thing you need is someone in the middle.

It's tempting to think that all you have to do to create fee income is give an outside salesman a desk in the corner or a kiosk in the lobby and wait for the cash to flow in.

Cash may flow, some of it your way. At least for a while, because there are important, new fee income opportunities for savings and loans and banks.

But there still is no free lunch. You have to put something at risk to gain a profit. In the case of outside salesmen, what you may be putting at risk is the integrity of your customer relationships.

There's a better way. When you do business with GNA, you're in control of the customer relationship. There's no one in the middle. GNA has a family of products, principally annuities, high-interest insurance and mutual funds, all tailored to the needs of your customers. We train and license your people, at our cost, so they understand the products and know how to respond to customer inquiries. Then we back you up with a superb service organization and a nationwide network of GNA specialists on call.

It's a plain, old-fashioned business arrangement you'll appreciate. We work at it. You work at it. We both earn a profit.

Call and we'll send you descriptions of our products and a very interesting due-diligence checklist with questions our best, most successful clients asked before they chose GNA.

The first question on that checklist concerns the financial strength and stability of the vendor. The answer in our case is that GNA has the backing of a Fortune 100 organization, the Weyerhaeuser Company.

Our phone number is 1-800-426-5520. Ask for Hans Carstensen.

The best in the business.

GNA
FINANCIAL PRODUCTS

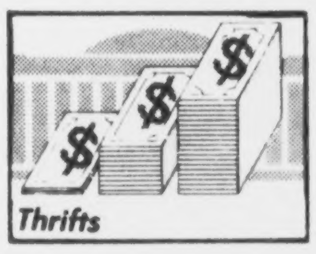
Bond Underwriting Firm Acquiring Minnesota S&L

Special to the American Banker

BLOOMINGTON, Minn. — Tax reform has prompted a municipal bond underwriting firm, Miller & Schroeder Financial Inc., to seek the acquisition of a medium-size Minnesota savings and loan.



Miller & Schroeder, based here, said the acquisition of Peoples Savings and Loan Association in Owatonna would help it to continue financing commercial real estate.

Federal tax revisions have severely restricted two methods that Miller & Schroeder depended on to finance housing projects and office buildings.

TV Retailer to Take Over Ailing Baltimore Federal

By GORDON MATTHEWS

NEW YORK — Home Shopping Network Inc., the rapidly growing retailer that sells merchandise on television, is expanding into the financial-services arena.

The company has unveiled an agreement to acquire the ailing Baltimore Federal Financial FSA, Maryland's second largest thrift institution, for $40 million.

Roy M. Speer, chairman and chief executive officer of Home Shopping, which is based in Clearwater, Fla., said his company will use Baltimore Federal to develop and market consumer financial products to the customers and viewers across the nation of its popular shop-at-home television shows.

BankAmerica Edges into the Black

By NINA EASTON
and MICHAEL A. ROBINSON

Fourth-Quarter Earnings

BankAmerica Corp. said its fourth-quarter profit of $82 million, or 44 cents a share, is proof of "tangible progress in the corporation's restructuring program."

"As we completed 1986, we saw nonperforming loans and credit losses begin to decline," said A.W. Clausen, chairman and chief executive officer. "We also far exceeded our goal to reduce staff levels during 1986, and slowed expense growth."

However, BankAmerica said losses widened to $518 million, or $3.74 a share, in all of 1986, against losses of $337 million, or $2.68 a share, in 1985. In the 1985 fourth quarter, BankAmerica lost $178 million, or $1.27 a share.

BankAmerica managed to eke out a profit in the final quarter of 1986 by selling assets, including its Italian bank

Thrifts Put More Money in Pass-Throughs

50 Institutions Account For Most of 25% Growth

By MARK BASCH

NEW YORK — Mortgage security holdings grew by 25% at thrift institutions last year, with 50 institutions accounting for just about all of the gain, according to an *American Banker* survey.

Mortgage Securities

The holdings at institutions insured by the Federal Savings and Loan Insurance Corp. had grown to an aggregate $133.7 billion on June 30, 1986. Those thrifts had an average of 11.5% of their assets in mortgage-backed pass-through securities, compared with 10% a year earlier.

But the 50 thrifts with the largest holdings had even bigger average gains than the industry overall. Mortgage securities at those thrifts grew by 57% to almost $80 billion, accounting for 21% of their total assets.

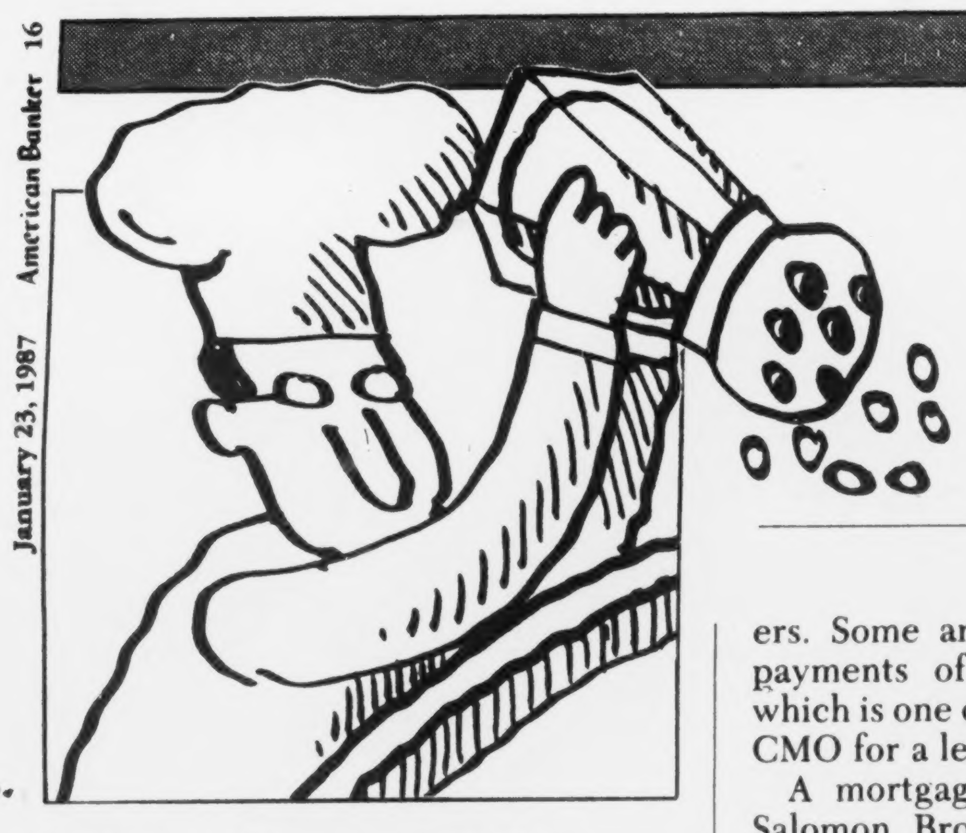
Tables List Top 50 Thrifts in Mortgage Security Holdings
Page 18
Mortgage-Backed Securities Find Promising Market in Britain
Page 2

For the second straight year, the largest holdings belonged to American Savings & Loan Association, Stockton, Calif., the principal subsidiary of the nation's largest thrift holding company, the Financial Corporation of America. American had $10.9 billion in mortgage securities at midyear 1986, more than two-and-a-half times the second-ranked thrift in the survey, First Federal of Michigan, Detroit.

Financial Corporation has been adding large amounts of mortgage securities to its portfolio as part of a growth strategy to try and reverse the huge losses the company suffered in 1984 and much of 1985. "We believe [growth] is in our best interest because we've been growing with earning assets," the chairman and president of Financial Corporation, William J. Popejoy, said in an interview last year. "We need earning assets to help carry our nonearning assets until they have been sold off."

American Savings probably has an even bigger lead over other thrifts now. The survey counted holdings as of last June 30, but in the following three months, the thrift's parent company added about $5.3 billion in mortgage-backed securities, increasing its portfolio to $16.9 billion. But the growth was

Pass-Throughs: Page 16 ➸



> "CMO issues have totally dominated the Eurobond market for about the past five weeks."

Continued from Previous Page

Markets, in the same issue, said investors no longer have to receive credit approval on each thrift issue and have a "blanket authority" to buy several thrift issues.

Even during the volatile period of the floating-rate notes in early December, the CMO bonds were faring better than other issues.

However, not all European investors are comfortable with the CMO floaters. Some are wary of the quarterly payments of interest and principal, which is one of the ideal features of the CMO for a lending institution.

A mortgage securities trader with Salomon Brothers said the investors also find the high coupon a mystery: "They want to know how we can be offering them 50 basis points over LIBOR on a triple-A-rated security."

When Franklin Savings offered its CMO floaters, it sought to ease some of the misgivings investors had about the securities.

The spread over LIBOR was about 30 basis points higher than recent transactions; there was no call option; and the maturity was five years, instead of the longer 7-10 years on other mortgage-backed securities.

Despite certain restrictions placed on the issue, Dennis Katzer, chief financial officer with Franklin, said the offering "was received well" and that "the floating-rate note market is definitely one of the funding sources" the institution would consider for future issues.

Since the Euromarkets' inception in 1983, syndicate managers have been trying to break into them with CMOs. U.S. thrift institutions are not the only firms to have issued CMO floaters in the Eurobond market. Freddie Mac sold $283.9 million in the floating-rate note market in 1986. Among other issuers were Drexel Burnham Lambert Securities Ltd. and Prudential Insurance Co. of America.

But for the thrift, entry into the foreign capital markets can be essential. In the December 1986 edition of *International Capital Markets,* Albert E. Fiacre Jr., executive vice president of finance for the Society for Savings, Hartford, Conn., said that "too many thrifts are reliant on their local Federal Home Loan Bank," to assure their institutions financial credibility, "because it is so easy."

Mr. Fiacre said he believes the $1 billion asset institution has to build its own credibility, and he asserts that "it's important [for thrift institutions] to be proficient in wholesale financings because the process exposes them to the outside world and is a big step forward towards becoming an investment grade company."

This, in turn, would allow an institution to engage in uncollateralized financings, along with asset-based fundraising.

This past November, the Society for Savings made an offering in the floating-rate note market — the first time a thrift issue was placed completely with Japanese institutional investors with offshore portfolios. The Society for Savings issue was also a five-year, no-call-option security.

In the past several months, both government-chartered and private institutions have used the market to offer mortgage-backed securities.

Since 1982, when Freddie Mac offered $600 million of zero coupon securities, U.S. housing financiers have been looking for ways to crack into the Eurobond market with their own mortgage-backed securities.

Both Freddie Mac and Fannie Mae have gone to the Eurobond market to sell other issues in the foreign markets, and interest in the securities has grown.

In September of 1985, Freddie Mac made its first foreign-targeted offering of mortgage pass-through certificates. It was a $100 million issue of multifamily Plan B Mortgage participation certificates, a fixed-rate first lien, conventional residential mortgages, and secured by properties containing five or more units. Plan B mortgages are assumable by creditworthy borrowers at the original interest rate.

These pass-through certificates were also attractive because they were exempt from the 30% withholding tax on interest paid to foreigners. Furthermore, financial institutions acting as custodians were generally exempt from the backup withholding requirement and reporting requirement on payments to the beneficial owner.

In November of 1985, Freddie Mac and Fannie Mae within a week of each other targeted European and Japanese investors with CMO issues totaling $350 million.

Though several of the issuers of CMO floaters have no immediate plans to make another entry into the floating-rate note market, they said that it was a good alternative to domestic capital markets.

The Fannie Mae spokesperson noted several economic factors — including widening spreads and the effects of the dollar's decline — for delaying any immediate action by that agency.

"We're still looking for opportunities to raise debt in the foreign markets, but we'll have to keep our eye on the various market conditions," the spokesperson said. ■

Pass-Throughs . . .

➞ Continued from Page 1

slowing in the fourth quarter, as monthly data from American Savings shows that the thrift added only about $164 million in mortgage securities in October and November.

Jonathan E. Gray, a thrift analyst with Sanford C. Bernstein & Co., New York, said that Financial Corporation's strategy reflects the current low interest rates. He said the company reduced its exposure to interest-rate increases in 1985, but it was still losing money because of its large amount of nonearning assets. "If they were going to earn any money, they had to reopen the interest-rate exposure," he said.

He said the effective yield on the securities purchased in the third quarter is around 9%, while the purchases were funded with short-term debt costing about 6%.

With interest rates expected to remain low in the near term, Mr. Gray feels Financial Corporation's earnings prospects are "quite good" with this strategy, but if rates were to rise over the next few years, the long-term outlook would be poor.

Like Financial Corporation, the second- and third-ranked thrifts in the survey — First Federal of Michigan and Gibraltar Savings, Beverly Hills, Calif. — have a little more than 37% of their assets in mortgage securities. But few other thrifts have that high a ratio. "If you analyze it, you'll find a very small number of institutions account for that addition of mortgage-backed securities to the portfolio," said Dennis J. Jacobe, director of research for the U.S. League of Savings Institutions.

In fact, if you take away the 50 institutions in the survey, the remaining 3,000-odd FSLIC-insured thrifts have only about 7% of their assets in mortgage-backed securities.

Mortgage securities are popular with thrifts because of their liquidity, analysts say, but Mr. Jacobe said one drawback to holding mortgage securities is that they are difficult to hedge properly, leaving the thrift with a lot of risk. "The idea that they're marketable tends to disguise the interest-rate risk a little bit," he said.

Reducing Interest Rate Risk

But some large thrifts are minimizing the risk by growing their mortgage securities portfolio as part of a structured-financing operation, said Peter E. Knight, vice president and director of mortgage finance for the National Council of Savings Institutions. He said these thrifts have been able to lock in an interest-rate spread on the securities.

Mr. Knight said thrifts would have to be at least at the $1 billion-asset level to be able to set up this kind of a structured-finance operation. "You're dealing with institutions that have to be pretty large," he said. "They're able to do things with the mortgages that smaller institutions are unable to do."

He said Santa Barbara Savings & Loan Association in California and City Federal Savings Bank, Bedminister, N.J., are two examples of those kind of thrifts.

Franklin Savings Association, Ottawa, Kan., has 82% of its assets in mortgage securities, the largest percentage in the survey. Dennis J. Katzer, executive vice president and chief financial officer of the thrift, said Franklin opts for securities instead of loans as part of its strategy to minimize credit risk and servicing costs.

"We have not been big originators of loans," he said. By taking on mortgage securities instead, "we reduce the servicing requirement and reduce credit risk."

Pacific First Federal Savings Bank, Tacoma, Wash., added large amounts of mortgage securities to more effectively use its excess capital, according to Jeff Thompson, vice president and mortgage portfolio administrator of the thrift.

Pacific First's mortgage securities holdings grew more than 12 times from midyear 1985 to midyear 1986, the largest percentage gain in the survey. "We were looking for a way to do conservative growth," Mr. Thompson said. He said the thrift was looking for assets with strong credit quality and liquidity.

He added that Pacific First is not worried about the interest rate risk because the thrift feels it can effectively manage the risk. "We feel very comfortable with our portfolio," he said.

In looking at a thrift with large mortgage securities holdings, "what I would want to know is how they got them," said Robert Chaut, an analyst with Salomon Brothers. He said that thrifts can add the securities to their portfolio either by securitizing loans they originate themselves, or by purchasing securities, and he would look more favorably at a thrift that takes the origination route.

Mr. Jacobe feels the growth in mortgage security holdings will slow in the future. "I think the trend is unusual," he said. "I think that what's going to happen is, some people are going to find that they didn't really want to invest in those mortgage-backed securities." ■

Strategic Dates

June 30, 1987

VAMP: The voluntary assisted merger program, the Federal Home Loan Bank Board's program enabling ailing thrifts to merge voluntarily with healthy associations and still gain federal aid, is extended until this date. The board's adoption of the program in 1982 was a temporary measure designed to assist those small thrifts that were suffering from the squeeze of high interest rates coupled with portfolios full of long-term, low-yielding mortgages.

Dear Reader, How Are We Doing?

The *American Banker* wants to make sure our survey on mortgage security holdings meets your information needs. So would you spend a moment to give us some feedback? Please clip out this questionnaire and return to: William Zimmerman, Editor, American Banker, One State Street Plaza, New York, N.Y. 10004 (212) 943-5712. We will try to incorporate your suggestions into the next survey.

(1.) How would you **change** the survey to make it more useful? What would you add?

(2.) What did you like **best** about the survey?

(3.) What did you like **least** about the survey?

(4.) How do you use the survey in your work?

Total Mortgage Securities are mortgage-backed pass through securities held in the thrift's portfolio on June 30. **A mortgage-backed security** is any of a variety of investment securities representing shares in a pool of mortgage loans; often guaranteed by the Government National Mortgage Association (GNMA) or privately insured. **A pass-through security** is a security representing an interest in an underlying pool of mortgages, on which payments received on the underlying pool are passed through to the security investor. According to the FHLBB's quarterly report of condition, mortgage-backed pass through securities are the sum of: (1) all mortgage-backed pass-through securities insured or guaranteed by an agency or instrument (e.g., FHLMC, FNMA, or GNMA) of the United States, including those eligible for liquidity plus conventional mortgage-backed pass-through securities; and (2) conventional mortgage-backed pass-through securities are not insured or guaranteed by an agency or instrument of the United States. They include Mortgage Guaranty Insurance Corp. (MGIC) short-term participation certificates which are collateral loans secured by liens on real estate. **Interest earned on mortgage securities** is all interest earned during the period (ending June 30) on mortgage-backed pass through securities. Included is the amortization of discounts and premiums earned during the period. **Total operating income** is the sum of gross interest income from loans and investments; plus net income from leasing, REO operations, service corporations and subsidiaries, and office building operations; plus all other operating income. Data were provided by **ADP Data Services Division** from their Federal Home Loan Bank Board data base of FSLIC-insured savings institutions. **(a)**— A division of Long Island Savings Bank of FSB, Syosset, N.Y. **(b)**— Aggregate data are from the FHLBB. The FHLBB data series was revised in July 1985. American Banker adjusted the June 1985 data to relect the changes in the series.

Banks Boost Investments in Mortgage Securities

Abundant Supply, US Guarantee, and Premium Yields Make Them Attractive

By MICHAEL CACACE

NEW YORK — Securities backed by home mortgages and insured by federally sponsored agencies are becoming an increasingly attractive investment vehicle for many commercial banks, an *American Banker* survey has found.

The abundant supply of these securities, their high-quality ratings, and their premium yields are the three main reasons for their appeal to banks.

Last year, for example, the top 50 banks in mortgage security investments increased their holdings by 77%. As of June 30, 1986, the top 50 banks held $15.05 billion in mortgage securities, compared with $8.48 billion a year earlier.

Some banks, however, posted gains that were substantially higher than the average. The First Union National Bank, Charlotte, N.C., which ranked as the top bank in mortgage security holdings, increased its mortgage security investments fourfold last year to $2.06 billion on June 30, from $517 million a year earlier. And the Irving Trust Co., New York, posted the largest gain among the top 50 banks, increasing its holdings of mortgage securities by more than 14,000% to $252 million at midyear 1986.

According to a spokesman for First Union, "the bank was attracted to the government guarantee, the attractive yield, and the flexibility of tailoring a Ginnie Mae investment to our yield and maturity needs. In addition, the slowing of loan demand in our markets was another factor." As of June 30, all of First Union's mortgage securities were government mortgage securities.

A spokesman for Irving Trust listed similar reasons for Irving's substantial increase in mortgage security investments. "Definitely, yield and quality were prime reasons for the invest-

Agencies Seek National Housing Policy

Freddie Mac, Fannie Mae Heads Hope Congress Will Set Course

By MARK BASCH

NEW YORK — As players in the secondary mortgage market gather in Hawaii for one of their biggest conventions, discussion is likely to center on a key issue facing the industry in 1987 — what role the U.S. government should play in the housing market.

The leaders of both the Federal Home Loan Mortgage Corp. and the Federal National Mortgage Association recently expressed concern over that issue and the effects that a national housing policy would have on their organizations.

"The issue that will be under scrutiny is broader than Fannie Mae or Freddie Mac — it is government's role in housing in general and the mortgage market in particular," Leland C. Brendsel, Freddie Mac's acting president, said in a speech this month at the Mortgage Bankers Association of America's economic outlook conference in New York.

"Tremendous attention must be placed on looking at any fundamental moves in the secondary market as to what its impact will really be on the national housing policy in this country," Fannie Mae President Frank V. Cahouet told reporters after his speech at the conference. "We feel that should be addressed at this time, before we move too much further down the road."

Mr. Brendsel said his main concern is the administration's proposal that mortgage loans purchased by Freddie Mac and Fannie Mae be capped, with limits varying from market to market. The limit would be $153,100 in areas

Sears Bank Selling Up to 50 Branches; Citicorp Link Seen

West Coast Bureau

LOS ANGELES — The Sears Savings Bank, whose earnings fell sharply in the first nine months of 1986, is negotiating to sell more than half of its 91 branches, industry sources said on Friday. Citicorp Savings is reportedly the leading candidate to buy the branches, which stand apart from Sears stores.

Citicorp Savings, San Francisco, is a unit of New York-based Citicorp, the nation's largest bank holding company. Sears Savings Bank, Glendale, Calif., is a unit of Sears, Roebuck and Co., the Chicago-based retailing and financial services concern.

Neither Sears nor Citicorp would comment. However, a report in the *Los Angeles Times* on Friday said Sears Sav-

Banks Increase Mortgage Securities Holdings

➸ Continued from Page 1

ments," he said. "Prior to these investments, we anticipated the more active prepayment of these securities, but the yield was still attractive."

These are some of the findings of the *American Banker's* second annual survey of the top 50 banks in mortgage security investments, published today. The survey, which covers the 12-month period that ended last June 30, is based on data from reports of condition submitted by banks to federal regulatory authorities.

The survey measured bank holdings of U.S. government and private certificates of participation in pools of residential mortgages; they are marked at book value. Government mortgage securities are U.S. government-issued or government-sponsored securities, including those originated by the Government National Mortgage Association, or Ginnie Mae; the Federal National Mortgage Association, or Fannie Mae; and the Federal Home Loan Mortgage Corp., or Freddie Mac.

Private mortgage securities are issued by other depository institutions and insurance companies. Government mortgage securities account for over 92% of total mortgage security holdings of the top 50 banks.

Reasons for Growth

Last year, substantially lower interest rates in the mortgage market caused a surge in mortgage lending and mortgage refinancings.

Most of these mortgages were fixed-rate loans. Many thrift institutions that traditionally invested in mortgages were shying away from these fixed-rate loans because of the problems experienced by the thrifts with fixed-rate investments over the past five years.

However, these institutions continued to originate mortgages. The supply of government mortgage securities grew by more than 30% to $475.6 billion at midyear 1986, from $365.7 billion a year earlier.

Commercial banks seeking relatively safe investments were attracted to the government mortgage securities for two reasons: They are quality investments sponsored by agencies of the U.S. government, and they were offering premium yields.

For example, at midyear, the yield on Ginnie Mae securities expected to mature in 12 years was 9.57%, or 186 basis points higher than the 7.71% yield on 10-year Treasury securities.

As reported in the *American Banker* last Friday, some thrifts — specifically the top 50 thrifts in mortgage security holdings — were also not afraid to invest in these securities. The mortgage security investments of the top 50 thrifts rose 57% to $80 billion on June 30, 1986, from $51 billion the year before, to account for most of the thrift industry's investment in these securities.

Other Survey Findings

- Of the $15.05 billion in mortgage security investments held by the top 50 banks at midyear, $13.91 billion, or 92.4%, were government mortgage securities.
- Mortgage security investments for the top 50 banks accounted for 2.1% of their total consolidated assets but more than 21% of their entire investment in securities of all types.
- According to the Federal Reserve Board's latest data for all insured banks, as of Dec. 31, 1985, mortgage security investments accounted for only 0.9% of the total consolidated assets of the banking industry and 5.6% of its entire investment in securities of all types.
- Among the top 50 banks, the 43d-ranked Equitable Bank of Delaware, in Dover, had the highest ratio of mortgage security investments to total assets. Its mortgage security investments of $104 million accounted for 23.2% of the bank's $449 million in assets.
- The Hibernia Bank, San Francisco, which ranked 35th in mortgage security holdings with its $118.4 million portfolio, had the highest ratio of mortgage security investments to total investments in securities. Government mortgage securities account for almost 95% of the bank's entire portfolio of securities of all types. ■

Dear Reader, How Are We Doing?

The *American Banker* wants to make sure our survey on bank mortgage security holdings meets your information needs. So would you spend a moment to give us some feedback? Please clip out this questionnaire and return to: William Zimmerman, Editor, American Banker, One State Street Plaza, New York, N.Y. 10004 (212) 943-5712. We will try to incorporate your suggestions into the next survey.

Meritor Financial Posts Quarterly Gain in Net Income

By MARK BASCH

Fourth-Quarter Earnings

NEW YORK — Meritor Financial Group, Philadelphia, reported higher net income in the fourth quarter, as the thrift holding company recorded its first profit independent of gains on the sale of investments and loans since the first quarter of 1985.

Meritor, the parent of PSFS, Philadelphia, had net income before extraordinary items of $4.7 million, or 13 cents a share, compared with a year-earlier loss of $1.7 million, or 5 cents a share, in the fourth quarter of 1985. Extraordinary gains from the use of net operating loss carryforwards made final net income of $9.1 million, or 26 cents a share, in the 1986 quarter, compared with $7 million, or 20 cents a share, a year earlier.

For the full year, Meritor posted a net loss before extraordinary items of $5.2 million, compared with a profit of $21 million in 1985. The company was profitable overall in 1986 because of the use of loss carryforwards.

The 1986 results were lower because Meritor reduced its reliance on gains from the sale of loans and investments. Net gains from those sales were $34.9 million in 1986, down from $109.3 million in 1985. In the fourth quarter of 1986, net gains were $5.2 million, compared with $29 million in the year-earlier period.

"We are currently emerging from a costly and sometimes painful process of restructuring," said Meritor chairman Frederick S. Hammer. "In the process of strengthening our balance sheet, we have sacrificed short-term earnings to position ourselves more competitively for the future."

The company had a 20% increase in net interest income in the fourth quarter to $70.7 million. ■

More Bank Associations Buy into Captive Insurer

NEW YORK — BancInsure, an insurance company created in 1985 by five state bankers' associations, said that three more state trade groups have purchased equity positions in the company.

BancInsure provides a full package of insurance products to financial institutions, including directors' and officers' liability and blanket bond coverages.

Its new shareholders are the bankers' associations of Arkansas, Montana, and Oregon. Headquartered in Oklahoma City, the company was originally formed by the state bankers' associations of Minnesota, North Dakota, South Dakota, Oklahoma, and Wisconsin.

BancInsure president Galen Pate said active negotiations are under way with six other state bankers' associations that are also expected to buy equity positions in the company.

Mr. Galen is also president of Signal Bank Inc., West St. Paul, Minn. ■

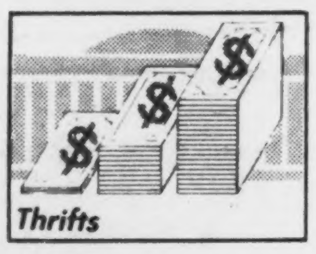
FSLIC Fund Nears Rock Bottom

Potential of Asian Market Lures Group to Hawaii

By NINA BERGLUND

HONOLULU — Many people look at troubled thrifts like Honolulu Federal Savings and Loan Association here or Bell Savings & Loan Association in San Mateo, Calif., and see nothing but problems.



Beset with lawsuits, plagued with bad loans, and stuck with foreclosed real estate, the nation's troubled thrifts generally are viewed as a pox on the financial services industry.

William E. Simon and Preston Martin, on the other hand, look at these thrifts and see opportunity.

Financial institutions, Mr. Simon said here, are "among the most attractive investments today," largely because bargains abound and industry evolu-

Simon Deal and Others To Push Reserves Down

By NINA EASTON
West Coast Bureau

LOS ANGELES — The proposed acquisition of two troubled California thrifts by former Treasury Secretary William E. Simon's investment group is the first in a series of upcoming deals that will substantially deplete what is left of the fund that insures the nation's savings and loans, according to industry sources.

Use of Desktop Computers For Banking Grows Slowly

By DAVID O. TYSON

NEW YORK — Fewer institutions offer video banking this year than a year ago and fewer plan to get into it. But the number of customers banking from personal computers in homes and offices continues to rise slowly and steadily.

AN American Banker
SURVEY

An *American Banker* survey shows that 33 banks, savings and loan associations, and credit unions now are in full operation or pilot tests with a remote banking service for consumers and small businesses. Last year the number was 38. (*American Banker,* Feb. 10, 1986, page 1).

Nine institutions introduced small business services during the year, reflecting the view that prospects are better there than in the consumer market. For two of them — First National Bank of Atlanta and Boulevard Bank, Chicago — it is the first entry into video banking of any sort.

As a year ago, *American Banker* is not estimating the number of video banking customers nationwide. The big players will not disclose their numbers,

4 US Banks Bid For Securities Units in Japan

By JED HOROWITZ

NEW YORK — Four New York banking companies are expected to apply to open securities subsidiaries in Japan within the next few weeks, according to sources.

The four companies — the first U.S. banks to directly apply for securities units in Japan — are Bankers Trust New York Corp., J.P. Morgan & Co., Manufacturers Hanover Corp., and Chemical New York Corp, according to sources at the banks. BankAmerica Corp. also may be negotiating for a Japanese license, but a spokesman at the bank could not confirm this.

U.S. investment firms have been rapidly building their capital bases in Japan, but most U.S. commercial banks are still waiting to get their feet wet. In early March, Japan's Ministry of Finance is expected to give banks the go-ahead to formally submit final applications.

A nod from Japanese regulators is tantamount to approval, bank sources said, noting that months of negotiations have preceded their bids to apply. In contrast to the U.S. regulatory process,

Fewer Banks Are Testing Video Banking Systems This Year

➙ **Continued from Page 1**

making it impossible to make even an educated guess of the total.

But among the institutions that do disclose, shown in the table on page 8, the numbers are up. Madison National Bank, Washington, D.C., now has 1,900 customers in its Home Teller service, up from about 1,000 a year ago. Toledo Trust Co. has 660 in Home VistaBank, up from 500.

Despite the institutions that have dropped out, total video banking customers of the disclosing institutions are up from 5,941 to 7,616 in the year. And as further evidence of latent interest in video banking out there, Bank of America signed on 14,000 customers in two promotion campaigns during the year, offering new subscribers two months free of the usual $8 a month charge.

Bank of America will not say what the attrition has been as the two free months ran out. But it said about half the 14,000 bought the AT&T 1300 terminal it was offering for $79.95, which indicates something more than casual interest in home banking.

Nor will Bank of America disclose how many HomeBanking customers it has. But one set of estimates making the rounds of the industry still puts it in the lead, with something on the order of 30,000. By these guesses, which are as reliable as estimates of the age of the universe, Chemical Bank and Citibank each have 20,000 and Chase Manhattan Bank has 10,000.

Video Banking

Even these numbers remain minuscule alongside the totals for consumers holding credit cards or using automated teller machines. They are definitely not mass market.

The *American Banker* survey table also shows the institutions that are not now in video banking but plan to be. Their number has fallen from 21 to 13 in the year as banks and thrifts have despaired of any mass market developing in the foreseeable future.

But a number of institutions feel they now have the experience and software ready to jump in quickly when the situation warrants.

First National of Atlanta was a co-developer with Harbinger Computer Services of InTouch Cash Manager, which it now offers to small-business customers. Robert Copeland, director of marketing at the bank, said the bank has an option to offer Harbinger's consumer service, which is almost a clone. "We don't see a demand for it in Georgia," he said, "but we could have a consumer product out in 30 days."

Leonard R. Graziplene, president of Macrotel, a subsidiary of Empire of America FSA, Buffalo, N.Y., goes Mr. Copeland one better. "If we have to do it, we could be out of the box in a week," he said.

Empire of America concluded a home banking pilot test last year and decided not to roll out a full service because it, too, sees no mass market before the 1990s.

In Mr. Graziplene's view, one of the impediments to a mass market is what he calls the downturn in the computer revolution.

"In the early '80s, people considered it fashionable and neccessary to have a computer in the home so as not to be left behind," he said.

"They were eager to find something to do with it. But the fact remains that most people who did buy a computer never learned how use it. Since home banking is based on at least minimal knowledge of computers, when people were relieved of the obligation, they no longer bought computers.

"What is left are serious-minded people who know how to use a computer. They would be an excellent core. The question then was whether we should service them or pull back. The latter was decided on. We know how to do it, have the programming, and know the market. But it's not a hot sell in the United States now. We have put it on the back shelf. We are working on the software. We are testing the mentality of people. But frankly, I can't see it will come back before the end of the decade."

Dropouts

Banc One Corp., Columbus, Ohio, one of the founding partners in Video-Financial Services, closed down an active video banking program during the year and has no plans to offer such a service.

Northwest Orient Airlines Credit Union, Minneapolis, closed a pilot on Dec. 31, largely because the Northwest acquisition of Republic Airlines last August extended its obligations but not the resources it could devote to the project.

That credit union was one of four using the Companion-at-Home system developed by the NCR Universal Credit Union, Dayton, Ohio. In September, the Credit Union National Association, Madison, Wis., struck a deal to take over marketing of Companion-at-Home.

But meantime, two other credit unions plan to drop the service. Both serve a high-tech clientele.

The Los Alamos Credit Union at the Los Alamos government laboratories in New Mexico has decided to cancel its home banking program when its contract for Companion-at-Home expires on April 1.

"We have 125 users signed up but presently only four active users," said Suzanne Collier, vice president for administration and executive assistant to the president.

"A lot in the pilot dropped out because of the inability to get the kind of information they wanted or interface with the software we have. It is just one problem after another. It's not a successful program here."

The other licenser of Companion-at-Home about to drop it is the ORNL Credit Union at the Oak Ridge National Laboratories in Tennessee. Members were notified Dec. 1 that it will be terminated March 1.

"The user base did not develop the way we hoped it would," said Larry Jones, marketing director for the credit union.

"We're disappointed. Research indicated about 55% of our membership has access to a PC at home or work. We have a high-tech group of people as members. But it's difficult to convince them to spend money on a modem if

Bank Lessons to Be Learned From Fall of People Express

➙ **Continued from Page 4**

just when to discount in order to stay competitive, and when to sit back and count on the business coming in regardless of price. Central file programs in banking can offer similar benefits in determining prices of bank loans and services.

• Finally, there is much to be said for specialization — knowing one job and knowing it well. Sure, it's great for the chief executive officer to understand the teller function, but the CEO doesn't have to be a teller once a week to maintain that understanding.

• Most important for banking, the demise of People Express cannot be taken as a sign of the failure of deregulation. The airline really was making a go of it under deregulation. Had the company only avoided some of its worst mistakes, it could have remained a major force in the skies.

New airlines will continue to spring up that offer special benefits to the public just as People Express did, and some of the new ones will thrive.

If we blame the downfall of this airline on deregulation, we will be forgetting that the public was first enchanted by the line and only later disillusioned by its policies.

With strict government regulation of prices and routes, the public never would have received the benefits of the low fares and broader service that People Express initiated and others followed to a great degree.

Banking is similar. Many lawmakers say they will not oppose the nonbank bank because the public benefits from this product of deregulation.

Banks that have failed have done so because they had poor territories or poor management, not because the public was allowed to get going rates on savings following the demise of Regulation Q. Had Regulation Q been maintained, the banks just would have lost the money to money market mutual funds and other competitors that were not so hobbled.

We will miss the competitive thrust of People Express. Yet, other lines will provide much of that in somewhat different ways. But the public is still better off having had the People Express years than it would have been with continued regulation.

And customers of financial institutions who look at what deregulation has done in this field certainly must feel the same way. ■

CMO/Remic Data Is Offered To Mortgage Bank Community

The Bond Buyer/American Banker today announced the launching of its Collateralized Mortgage Obligation/Real Estate Mortgage Investment Conduit Information Service. It will make collateralized mortgage obligation principal and interest payment data available to the mortgage banking community.

Richard H. Tierney, the company president, commented that "the introduction of this CMO service highlights The Bond Buyer/American Banker's expanding role as a supplier of information in the mortgage and fixed-income markets. Now, we are making available information detailing interest and principal payments for each tranche of these complicated securities."

Beginning in February, this information will be provided in hard copy, fiche, diskette, or magnetic tape on the 13th and the next-to-last business days of each month. The complete collaterized mortgage obligation/real estate mortgage investment conduit market will be researched on a continuing basis. By the second quarter of 1987, all this data will be compiled into an online data base for easier retrieval.

Since the first issue of collaterized mortgage obligations in June 1983, over $75 billion worth of these securities have been structured by a wide range of financial institutions. It is expected that the CMO/Remic market will continue to grow in 1987 because of more favorable and efficient tax treatment for these securities.

Carl Vella, senior vice president for financial services, noted: "The Bond Buyer/American Banker has served the mortgage-backed security market for 15 years and is pleased to extend its information services into the CMO/Remic arena.

"Our clients, who have been getting factor information for GNMA, FNMA, and FHLMC securities on microfiche, diskette, magnetic tape, or hard copy, can now receive CMO data in the same medium," Mr. Vella added.

"CMO/Remics have more complicated processing requirements since they have no standard settlement, record, or payable dates. We are pleased to extend our services into this area because of the increasing need for accurate and up-to-date information on these securities."

CMO/Remic factor and interest payment information can be obtained in these formats for the following monthly rates: hard copy for $100, fiche for $50, diskette for $150, and magnetic tape for $300.

A customized payable date service is also available for those customers needing more than semimonthly pool data. The price will vary depending on the number of changes required on selected securities.

For decades, the Bond Buyer and American Banker have been the leading distributors of fixed-income and banking information. In addition to the traditional print products, information is offered now in data base, tape, diskette, and microfiche formats. ■

Dear Reader, How Are We Doing?

The *American Banker* wants to make sure our survey on video banking meets your information needs. So would you spend a moment to give us some feedback? Please clip out this questionnaire and return to: William Zimmerman, Editor, American Banker, One State Street Plaza, New York, N.Y. 10004 (212) 943-5712. We will try to incorporate your suggestions into the next survey.

(1.) How would you **change** the survey to make it more useful? What would you add?

Video Banking May Be the Wave of the Future, but It's Distant

Continued from Page 6

this is the only reason they'd have to own one at this time."

Mr. Jones was asked about the suggestion that depository institutions give away modems to develop the market.

"That suggestion probably came from someone who hasn't priced modems lately," he said.

Some of the innovating in video banking is being done by the small institutions offering the service.

One is off-line processing, which is a feature of the systems developed both by Harbinger and Princeton TeleCom Corp., Princeton, N.J. Customers of Chase Manhattan Bank also have it if they use Andrew Tobias's Managing Your Money, the financial management software system that has been integrated with Chase's Spectrum service.

In off-line processing, the customer dials up his bank, connects into its video banking service, downloads all the information on his accounts in a quick burst, and disconnects. Working locally in his own PC, he enters orders for bill payments and account transfers and composes any messages he cares to send to the bank staff or other users. Then he reconnects and uploads all that data.

The customer's banking records are updated at both the bank and in his own software in this fashion.

One major benefit of this to the bank is the time saved on its computer. In other video banking services, the customer is on-line during the entire session. A benefit to both bank and customer is the telecommunications time saved.

The mutual fund industry is ahead of the banks in another innovation in video banking — automated clearing house transactions.

Four institutions permit an on-line customer to initiate preauthorized automated clearing house transfers to and from his own checking accounts at other institutions. Citibank does not allow it in its Direct Access service but does allow it in its upscale Focus service.

Some banks and thrifts fear the feature would drain away balances. Perhaps that is why it is being tried mostly by smaller institutions, to draw in balances from the big ones. ■

Videobanking Dropouts

The following banks, bank holding comapnies, and other financial insitutions have run pilot tests or operational systems of videobanking and have dropped the services with no plans to resume.

ARIZONA	Western Savings & Loan Assn., Phoenix. HBI test.
CALIFORNIA	Crocker National Bank, San Francisco. Pronto test. First Interstate Bank of Calif., Los Angeles. Own test.
CONNECTICUT	Colonial Bank, Waterbury. HBI test.
FLORIDA	Bank of Coral Gables. Viewtron. County Natl. Bank of South Fla., North Miami Beach. Viewtron. Dadeiand Bank, Miami. Viewtron. Flagler National Bank, West Palm Beach. Viewtron. The Mall Bank, West Palm Beach. Viewtron.
ILLINOIS	Continental Illinois NB&T Co., Chicago. HBI test. Farmers State Bank & Trust Co., Jacksonville. Own test.
MICHIGAN	Manufacturers National Bank, Detroit. Pronto test.
MINNESOTA	First Bank System, Minneapolis. FirstHand test. Northwest Orient Airlines Credit Union, Minneapolis. NCR test.
NEW JERSEY	Citizens First National Bank, Glen Rock. Ridgwood test. Fidelity Union Trust Co., Newark. Ridgewood test. Horizon Bancorp., Morristown. Own test. Independence Bank, Allendale. Ridgewood test.
NEW YORK	Marine Midland Bank, New York. HBI test.
NORTH CAROLINA	First Union National Bank, Charlotte. HBI test.
OHIO	BancOne Corp., Columbus. VideoFinancial. Third National Bank, Dayton. HBI test.
TENNESSEE	Central Trade Bank, Knoxville. Bank-at-Home test.
WISCONSIN	First Wisconsin National Bank, Milwaukee. HBI test.

FBI Reveals It Has Begun to Investigate The Collapse of Park Bank of Florida

Special to the American Banker

ST. PETERSBURG, Fla. — The Federal Bureau of Investigation publicly acknowledged that it has launched a full investigation into last year's collapse of the Park Bank of Florida.

The bureau has not yet identified specific targets of its probe. But Robert W. Butler, special agent-in-charge of the FBI's Tampa office, said that the investigation will seek to uncover criminal acts that precipitated the fall of the St. Petersburg-based bank last Feb. 14.

"Any evidence developed will be presented to the U.S. Attorney in Tampa, who will then decide whether or not to present the case to a federal grand jury," Mr. Butler said in a written response to a news inquiry. "Bank failures are a national investigative priority of the FBI due to the severe impact those failures have on the federal government and the economy as a whole."

Friday's statement marks the first time the Justice Department has con-

Texas Bankers Are Sanguine About Long-Term Prospects

By DAVID LAGESSE
Southwest Bureau

DALLAS — Texas banks probably will not earn solid profits for a year or two, but the sense of impending financial crisis has faded from the canyons of the state's urban centers.

Reduced are the chances that a Houston or Dallas bank could gain the notoriety of a modern-day run on the scale of a Continental Illinois.

Southwestern holding companies never held quite the exposure to overseas and uninsured depositors that tumbled Continental Illinois, yet the possibility of an overnight run lingered in the air for much of 1986.

Now, regulators are said to be actively seeking merger partners for several of the holding companies, but the most visible pressure is coming from creditor banks — not skittish depositors.

Already the big Texas banks appear to be on more solid ground. Withdrawals have slowed with the return of oil prices from a summertime low of $10 per barrel to around $18 in January, and interstate banking prospects added cool relief to funding

'86 in Washington: Banking Industry Has Had Better Years in the Capital

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — On an otherwise peaceful October night last year during the American Bankers Association convention in San Francisco, the president of the Chase Manhattan Bank stood up to argue that his bank charter had become more trouble than it was worth.

The charter cost Chase more than $160 million a year in regulatory compliance, said Thomas Labrecque, the president and chief operating officer of the nation's third largest bank, and it gave back little in return.

"Right now, I can't do anything in consumer lending that GMAC [General Motors Acceptance Corp.] can't do," he said. "I can't have any more securities powers — in fact I have less — than [Goldman, Sachs & Co.]."

'86 preview '87

A Series of Articles Looking Back and Ahead At Issues Facing the Financial Services Industry

The upshot, he said, is that Chase will give up its charter — its franchise to operate as a bank — if Congress does not grant banks new powers and services within the next few years.

That's the kind of year it was for

3 Big Banks Press Fed on Underwriting

Commercial Paper Limits Too Strict, Firms Argue

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — Pressing their case for new securities underwriting powers, three big New York banking firms told the Federal Reserve Board Tuesday that it erred last month in interpreting a key section of the Glass-Steagall Act.

The issue could prove crucial for the banks. In a ruling Dec. 24 that Bankers Trust New York Corp. could sell commercial paper for clients through an affiliate, the Fed set stringent limits on the size of the business.

Although the central bank is widely expected to approve the securities underwriting applications from Bankers Trust, Citicorp, and J.P. Morgan & Co., last month's decision on commercial paper indicated the Fed might place similar limits on the size of that business.

The three banks want the Fed to permit them to underwrite commercial paper, mortgage-backed securities, municipal revenue bonds, and consumer-receivables through affiliates that also underwrite U.S. government securities.

Their remarks were made at a crowded open meeting in the Fed's board room here, called by the central bank to air the controversies surrounding the entry of banks into additional securities underwriting services.

Fed Chairman Paul A. Volcker said at the hearing that he believes Congress should rewrite the Glass-Steagall Act to permit certain types of bank securities underwriting. Mr. Volcker indicated that he has considerable doubt, however, about how far the law cur-

Bank of America Tightening Operations in Asia

Despite Retail Profits, Bank Shifting Emphasis to Upscale Markets, Fee Income

By FRANCINE C. BREVETTI

The first of two parts

HONG KONG — Bank of America is dissolving or selling off some of its most profitable business in Asia in order to help the worldwide organization make up for its heavy losses.

The bank's parent, BankAmerica Corp., reported total losses for 1986 of $518 million, compared with losses of $337 million in 1985.

While its Asian business has been robust and growing, with a few exceptions, the organization here has completed a round of cuts in personnel, business units, and assets. At the same time, the emphasis of operations here is being shifted from small- and medium-size customers to an upscale market, and from traditional lending and loan syndication to fee-based income. Asia's Bank of America will emphasize capital markets, commercial and private banking, trade finance, foreign exchange, money market trading, and business with China.

It is also trying to edge out competition with vast investments in technology for its merchant banking, treasury management services, correspondent banking, and dealing room expansions.

Stephen B. Hunt, senior vice president and general manager for Bank of America's Hong Kong area, said he resents a common perception that the bank is sinking fast.

"I don't feel the bank is in a crisis," he said. "Frankly, the bank is making money here. We are committed to solving the earnings problems but there are parts that are still healthy." He said results in his area were up over last year, but did not provide specific figures.

Bank of America divides Asia into four areas: Mr. Hunt oversees Hong Kong, Taiwan, China, and India; Japan and South Korea are a single administrative unit; Australia, New Zealand, and New Guinea form another area; the Southeast Asia unit consists of Malaysia, Thailand, the Philippines, Singapore, Indonesia, and Brunei.

In 1986, Hong Kong slashed staff by 240, leaving 1,020 employees. There are no layoffs on the agenda for this year. Singapore laid off 200; Bangkok, 61; Manila, 110; Tokyo, 38; and Kuala Lumpur, 36. Sri Lankan operations were closed in 1986, and Guam's were shut down in 1985. Bank of America is considering moving out of another country.

The banking community in Hong Kong was rocked when Bank of America announced it would close eight of its 11 retail outlets, but many bankers here are feeling the pinch of rising staff and property costs. In 1985-86, several banks in Hong Kong closed branches, including the Hongkong & Shanghai Banking Corp., Standard Chartered PLC, the Bank of China, Barclays Bank PLC, and Banque Nationale de Paris.

Card-Issuing Operations to Go

According to Mr. Hunt, the institution has decided to sell off its Visa card-issuing operations in Hong Kong and Singapore. The consumer finance unit of the Hong Kong branch may also go. The retail branches, credit card, and consumer finance businesses are attractive to bankers in Hong Kong; they amount to Bank of America's "crown jewels," an executive of the bank said.

The sale of these operations is the result of a decision by the bank's San Francisco headquarters to withdraw from the foreign retail business. The bank also pulled all foreign-based economists home and some were laid off, including three who covered Asia.

The future of the Hong Kong public relations office is also uncertain. Half of Bank of America's Asian loan portfolio is concentrated in Japan and South Korea; about 30% in Southeast Asia, and the balance in the Hong Kong and Australian administrative regions. Richard K. Hoffman, senior vice president, special assets group-Asia, said most of the credit difficulties are in Indonesia, Singapore, Thailand, and Malaysia; problems emerged after a period of economic growth period in Asia from 1977 to 1983.

Asia's growth was so strong that it "led to the fantasy that it would last forever," Mr. Hoffman said. "I never suspected it would fall when it did and fall so fast." The bank reduced its Singapore portfolio by 25% to 28% in the past 16 months, especially among small- to medium-size accounts. It will remain there on a smaller, more selective basis.

Mr. Hoffman said Indonesia's portfolio was improving rapidly. Although the bank has been reducing its exposure in Malaysia over the past 18 months, he said he is uncertain about profitability in that country this year.

He also called Australia "overbanked." Bank of America has a "solid operation there," he said, "but we will never make a huge profit" because of competition from foreign banks. The bank has abandoned retail business there as well.

While most banks have had trouble in Taiwan, that island has always been a conspicuous success for the Bank of America. The bank is equally pleased with its operations in South Korea and India.

But Mr. Hoffman said he is concerned about the bank's decision to concentrate on upscale customers and certain fee-income specialities. "If we are that narrow in marketing, how large an organization can we support?" he said.

New Emphasis in China

The Hong Kong operation plans to pay more attention to its China business; it is beefing up staff here and in China. Bank of America is already one of the lenders on a coal slurry mine project, a joint venture with the Occidental Petroleum Corp. It is also a lender in the McDonnell Douglas Corp.'s joint venture to build aircraft in Shanghai. In addition, it is the largest seller of traveler's checks in China.

But rather than concentrating on its corporate customers with operations in China, Mr. Hunt wants to increase business with the growing Chinese banking network, where he sees new opportunities. The Bank of China is rapidly producing subsidiaries. The lending and project finance entity, China International Trust and Investment Corp., Beijing, already has clones in Shanghai and Canton.

Mr. Hunt wants to increase business with Chinese financial institutions in trade finance and correspondent banking services; payout services, account services for operating accounts in foreign exchange, foreign exchange trading, securitized debt transactions, joint venture financing, and short- and medium-term loan facilities for the client bank's own trade needs or for its customers.

The "China business" has been largely unprofitable for banks representing foreign corporations or pursuing Chinese banking business. Capital markets transactions have amounted to little more than spot business with the Bank of China. There have been well-publicized commercial paper issues with China International Trust, but the paper does not trade well.

Mr. Hunt said Bank of America has been profitable in China, but his counterparts in Hong Kong and abroad are skeptical about prospects for making anything but the thinnest margins.

Third World and East Europe Owed $587 Billion To Western Banks at End of 1985, Study Shows

By M.S. MENDELSOHN

LONDON — More than half of the $1.15 trillion in foreign debt owed by 155 Third World and East European countries at the end of 1985 — some $587 billion —was unguaranteed debt owed to the Western banking system, according to the Organization for Economic Cooperation and Development.

The finding is published in a report, called "External Debt Statistics," that provides the most comprehensive picture of international debt yet attempted by any official organization.

It is drawn from the creditor statistics of the OECD and the Bank for International Settlements as well as the debtor statistics compiled by the World Bank and International Monetary Fund. The result is the first clear and complete breakdown of what developing countries owe and to whom they owe it.

The compilation of detailed data for 155 countries is an important breakthrough in the management of international debt, where poor reporting has often contributed to debt difficulties and then made their resolution more difficult. Debt renegotiations have often been impeded by ignorance on the part of debtor countries and their creditors, especially about debt owed to other creditors.

The latest data break down the debt owed by each of the 155 countries to the Paris Club and the London Club, to other government creditors, and to preferred creditors like the International Monetary Fund, the World Bank, and other multilateral development banks, whose claims are never rescheduled.

The Paris Club is the forum in which developing countries renegotiate debt owed to the governments and official export credit agencies of Western countries belonging to the OECD. The London Club is a forum in which countries renegotiate debt owed to commercial banks.

First Federal Got $358.5 Million in FSLIC Aid

Continued from Page 3

terest rate spread problems.

"It's pretty much in line with the cost to resolve these types of institutions," Mr. Vigna said.

Several industry observers said the Bank Board has little choice about giving out assistance if it wants to get these problem institutions off its hands.

"I'm hard up to think of another way that FSLIC could have done this thing," said Paul A. Willax, the president and chief executive officer of Empire of America FSB, Buffalo.

"It's willing to pay what it has to pay to resolve the larger cases," said Thomas P. Vartanian, a thrift attorney with Fried, Frank, Harris, Shriver and Jacobson. "I think they feel it's worth it to get that monkey off their back."

"In 1981, 1982, it would not have been unusual to give out sums of money like that several times a year in large assistance deals," said Mr. Vartanian, who was the Bank Board's general counsel during that period.

The problems of First Federal and Talman were caused mainly by interest rate mismatches, but the FSLIC may have to pay similar assistance packages to resolve more recent problem cases.

"Certainly, the phoenix thrifts represented some of the most severe remaining problems from the 1981-to-1984 interest rate crunch era," said Michael L. Ryan, an attorney with Cleary, Gottlieb, Steen & Hamilton. "But there are problems from the 1985-to-1986 asset-quality era on the Bank Board's plate now that may rival First Federal of Rochester in magnitude."

Mr. Vigna, however, says that First Federal is a special case. "I would think it would be unusual, because it's in the phoenix program," he said.

First Federal was one of five thrifts created by the Bank Board's phoenix program in 1981 and 1982. In that program, two or more troubled institutions were merged into a larger thrift that operated under tight control by the Bank Board.

First Federal was created in 1981 by the merger of First Federal and the Franklin Society Federal Savings and Loan Association, New York. Three other New York City thrifts were merged into the institution in 1982.

"When you're looking at First Federal of Rochester, you're not looking at one problem — you're looking at several that were merged into one," said Bank Board spokeswoman Martha Gravlee in defending the large assistance package.

Mr. Vigna said that it would have cost the FSLIC anywhere from $1 billion to $1.25 billion to resolve those cases separately.

Last August, the Bank Board announced that it was removing First Federal from the phoenix program and putting control of the institution into the hands of its current board of directors and management. The Bank Board said it approved a recapitalization plan for the thrift, but it did not announce the size of the assistance.

A comparison of First Federal's third-quarter and second-quarter data, however, reveals the level of FSLIC aid. As of March 31, First Federal had no reserves and had $141 million worth of income capital certificates and $17.5 million worth of net worth certificates outstanding. By Sept. 30, the $158.5 million worth of certificates were gone from the balance sheet and the institution had $358.5 million in reserves, indicating that the FSLIC cash infusion totaled $200 million.

The income capital and net worth certificates are effectively loans to a thrift's net worth by the FSLIC that are supposed to be repaid when an institution returns to financial health. The income capital certificates are supposed to be repaid with interest. So by forgiving the certificates, the FSLIC's total aid package for First Federal was $358.5 million, not counting interest that would have been paid on the income capital certificates.

First Federal's total net worth as of Sept. 30 was a strong $263.5 million, even with a negative $95 million on the balance sheet from previous losses incurred by the institution. Its net worth to assets ratio was 5.7%.

First Federal has no current plans to convert from mutual to stock form of ownership, and has no other capital-raising plans in the works, according to Robert E. Nolan, the director of public relations for the thrift. Shortly after Talman left the phoenix program, it converted to stock form with an $81 million public offering.

The Bank Board data shows that First Federal lost $1.7 million in the third quarter after posting a $1.9 million profit in the second quarter. But the institution was able to turn around in the fourth quarter, its first full quarter after the recapitalization. Although the quarterly figures are not yet available, Mr. Nolan said that First Federal posted a $13.8 million profit for the full year.

When First Federal was formed in 1981 as the first phoenix thrift, some New York thrift executives were upset that the Bank Board was creating a large thrift that would compete with them.

But at least one of those critics is supportive of the Bank Board's recapitalization of First Federal. "They probably considered it the best alternative," said George L. Engelke Jr., executive vice president of the Astoria Federal Savings & Loan Association, Astoria, Queens, N.Y. "Somewhere along the line, some kind of assistance was going to have to be given."

Mr. Engelke said that the Bank Board's assistance indicates support for First Federal's current management team, which was put in place after the institution entered the phoenix program.

Mr. Willax of Empire of America FSB did disagree with one aspect of the assistance package for First Federal: the forgiveness of the income capital certificates. When Empire converted from mutual to stock form last November, it had to convert $67.9 million in income capital certificates to adjustable-rate cumulative preferred stock held by the FSLIC. Empire has to pay a market interest rate on that preferred stock.

"I wish we could establish a more formal way of helping thrifts that need help," rather than helping them on a case-by-case basis as the Bank Board operates now, Mr. Willax said. "There must be some kind of quantitative formula." ■

The Bond Buyer Municipal Bond Index was designed by the Chicago Board of Trade to serve as the basis for trading Long-Term Municipal Bond futures contracts when approved by the Commodity Futures Trading Commission. The Index represents an average of the figures obtained when the price of each of 40 select term bonds is divided by a figure derived from the amount at which the bond would be priced to yield 8%. In all computations, the maturity of a bond is represented by its first call at par. The Index is computed daily and is quoted in points and 32nds.

Debt . . .

Continued from Page 2

tor countries not belonging to the OECD.

The Paris and London clubs have long insisted on burden-sharing with all creditors other than multilateral institutions. The data on debt of different countries could provide a guide to equitable such burden-sharing.

The report shows that:

- Although 45 Third World and East European countries have run into debt difficulties since 1980, another 110 countries are continuing to service in full foreign debts totaling $566 billion, including $250 billion owed to Western banks.
- The 45 countries that have run into difficulties since 1980 owe $585 billion to foreign creditors, including about $340 billion to banks. Between them, these troubled debtor were due to make principal repayments of more than $43 billion in 1986. The study did not supply the amount of interest payments they were due to make. However, informed guesses are that those amounted to about $35 billion, which would have made the total debt service due from those countries almost $90 billion last year, and probably a similar amount this year.
- Of the total owed in 1985 by the 155 countries, 25% was to the Paris Club for aid and export credits; 51% to banks; 11% to creditors outside the Paris and London clubs; and 13% to preferred creditors such as the IMF and World Bank.
- The $587 billion owed at the end of 1985 by all 155 Third World and East European countries amounts to about 20% of international bank lending, and the $340 billion owed by 45 troubled debtor countries amounts to about 11% of international bank lending. ■

Announcing A Major New Source Of Intelligence For Financial Services Decision-Makers.

MRCA announces the availability of *FinAnswers*. . . the first marketing information service to track and analyze the actual financial transactions of a national sample of upscale consumers.

And frankly, the world of financial services will never be the same.

FinAnswers can answer all your critical questions—about pricing, new products, cross-selling opportunities, market segmentation, and what the competition is up to—with hard facts instead of fantasies. Even more important, this breakthrough in market intelligence for the financial services decision maker is available by subscription for under $5,000 for a full year's worth of information.

If you'd like to know more about *FinAnswers*, we'll be happy to send you a free copy of our report on The CD Market for your evaluation. Just call or write:

SPECIAL REPORT

Some Banks Turn More Cautious In Issuing Standby Credit Letters

By LISABETH WEINER
Midwest Bureau

CHICAGO — Standby letters of credit remain a strong source of earnings for many banks. But with increasing pressure on pricing and the likely imposition of risk-based capital guidelines, U.S. bankers say their presence in that market is dwindling.

While most banks have continued to increase the amount of their outstanding standbys, the rate of that increase has declined markedly.

According to a survey by the *American Banker,* the 10 largest U.S. banks had an 11% growth in outstanding standbys from Dec. 31, 1984, through June 30, 1986. Growth among the top 20 banks in this credit enhancement product was 12.7%; among the top 50 banks it was 13.64%. And for the top 79 banks, the total amount of standbys grew by nearly 15% to $145.5 billion.

But in recent years, it was not unusual for standby letters of credit to soar by more than 20% in a year at the top money center banks, and by 25% at the

Bank Industry Is United in Bid to Fed For Increased Underwriting Powers

By ROBERT M. GARSSON
Washington Bureau

News Analysis

WASHINGTON — The banking industry was united to an unusual extent this week as representatives of banks, large and small, pressed the Federal Reserve Board to approve applications permitting bank affiliates to underwrite four new types of security.

The underwriting authority being considered by the Fed would apply to commercial paper, municipal revenue bonds, mortgage-backed securities, and consumer-related receivables.

But at least one large banking company warned that the restrictions on underwriting volume that the Fed appears to be considering would create a two-tiered system in which a few large eastern bank holding companies would dominate.

The big New York banking companies whose applications are under consideration — Citicorp, Bankers Trust New York Corp., and J.P. Morgan & Co. — all objected to the 5% limit the Fed appears to favor and asked for ceilings ranging up to 15% instead.

However, Security Pacific Corp., Los Angeles, argued that even a 15%

FSLIC Plan Tied to Ease By Regulators

Legislator Preparing Bill To Avoid S&L Closings

By ROBERT M. GARSSON
and JAY ROSENSTEIN
Washington Bureau

WASHINGTON — Rep. Steve Bartlett, R-Tex., said Wednesday he is set to introduce legislation that would link the proposed recapitalization of the thrift insurance fund to requirements that industry regulators go easy on insolvent thrifts.

The bill would not require regulators to keep open savings and loans that are mismanaged or the victims of management fraud, said Mr. Bartlett, a member of the House Banking Committee.

But it would require that the Federal Savings and Loan Insurance Corp. to give bankrupt or nearly bankrupt thrifts in economically depressed regions time to work out their problems.

Mr. Bartlett's action capped a week in which Texas lawmakers intervened with the House Banking Committee to insure that the FSLIC would not be able to use the proposed cash infusion to begin liquidating thrifts in that state. With the downturn in energy, agricultural, and office real estate markets, Texas institutions have been particularly hard pressed.

Last Thursday House Speaker James Wright, D-Tex., met with House Banking Committee Chairman Fernand J. St Germain and other committee members to discuss their concerns about the FSLIC recapitalization.

Following the meeting, a Tuesday morning vote on the FSLIC measure scheduled in a House Banking subcommittee was postponed. Instead, committee Democrats caucused and agreed to hold another round of hearings that would focus on the forbearance proposal. It is unclear when votes on the issue will be held.

The decision by the banking committee leadership to postpone committee and subcommittee votes also gives the U.S. League of Savings Institutions more time to muster support for its overall plan for aiding the FSLIC, a plan that differs from a Treasury proposal supported by the Federal Home Loan Bank Board and considered the front-runner to date.

The Treasury proposed that $3 billion in capital from the the Federal Home Loan Bank System be leveraged to provide $15 billion immediately to the FSLIC. The U.S. League has countered with a proposal that would give the FSLIC $5 billion a year in new money for each of the next two years. The U.S. League's plan also included forbearance requirements. The Treasury contends that the U.S. League proposal is inadequate.

Mr. Bartlett's bill could prove to be the key to moving an FSLIC recapitalization measure through the House. He said in an interview that it was drafted in consultation with Mr. Wright's office, as well as with the U.S. League, the Bank Board, and the Treasury Department. He also said it will be cosponsored by both Democrats and

US Banks' Share in Standby Credit Letter Market Is Dwindling

➸ Continued from Page 1

top 100 banks.

Some banks have apparently become more cautious issuers of standby letters of credit, sometimes spurning such business except in cases of customer relationships.

Standby letters of credit, in effect, make the issuing bank the lender of last resort. The bank rents its credit rating to the customer for a fee, in turn guaranteeing that a customer will perform as expected. If the customer defaults on the obligation backed by the standby, the bank may be asked to cover the debt.

Standbys traditionally have fit into the category of contingent liabilities, with few reporting requirements from federal regulators. Most standbys simply add fee income without adding assets to the bank's balance sheet. That enhances return on assets without requiring the use of capital — a costly and scarce resource. And only a small percentage of standbys have resulted in losses.

Rethinking Strategies

Some changes are in the offing, however, and in anticipation, banks are rethinking their strategies on standby letters of credit.

Perhaps the biggest change is the Federal Reserve's intention to impose risk-based capital requirements for most off-balance-sheet items, including standby letters of credit. These standards have emerged amid growing concern that in the recent explosion in off-balance-sheet lending activities, banks have not been setting aside adequate reserves to cover potential losses.

"If the regulators impose capital requirements on standby letters of credit, at the time this takes place we'll have to reconsider the pricing on those instruments," said Robert A. Rosholt, vice president and manager of corporate finance of the asset liability committee of First National Bank of Chicago.

But Mr. Rosholt said if domestic banks are forced to increase their pricing on these corporate finance tools, it will be more difficult to compete with most other foreign banks, which are not subject to the same primary capital requirements. Only the United Kingdom and the United States have agreed on uniform risk-based capital standards. In the past, Mr. Rosholt said, aggressive competition from the Japanese has kept pricing on standbys at razor-thin margins.

Most recently, Mr. Rosholt said, foreign banks have continued to underprice standbys, but domestic banks have raised their prices in an effort to make sure they are paid adequately for the credit risk.

"Either U.S. banks have stopped marketing the standbys, or they have raised the fees.," he said. "Some banks feel a very binding commitment on a standby. They recognize they have risk exposure."

Most bankers strongly believe they must be paid for this credit exposure. But at current market levels, fees that often run at six basis points, 12 basis points, or even 25 basis points do not adequately cover the risk on a standby.

Low Standby/Capital Ratios

Bankers are also saying this pricing will not be sufficient to cover the cost of capital that is soon likely to be required to back standbys. In anticipation of risk-based capital guidelines, many banks have been diligent about keeping their ratio of standbys to primary capital at a specific level.

The *American Banker* survey found that several banks reduced their standby outstandings and increased their primary capital levels in order to reduce the standby/capital ratio. During the survey period, for instance, Manufacturers Hanover Trust Co. cut its outstandings by 15%, raised its primary capital level by about 14%, and its ratio declined to 2.45% from 3.34%. At Chemical Bank, helped by a 14% decline in outstandings and a 30% increase in primary capital, the ratio fell to 2.2% from 3.38%.

The average standby/primary capital ratio among the money center banks was appoximately 2.3% at the end of 1986, according to the survey. So a bank such as Chase Manhattan, which had a 56% increase in its outstandings, still has a ratio of about 2.25%, slightly under the average.

First National of Chicago, which lowered its standby/capital ratio to 1.92% from 2.5% over the survey period, sees a need for more efficient use of capital in the face of possible regulatory changes.

"We felt on all the things we needed to support with our capital the mix previously was not right," Mr. Rosholt said.

Lower fees, however, are not the only reason Japanese banks have been successful at securing standby letters of credit. Equally important is that most U.S. money center banks do not enjoy the AAA ratings common to Japanese banks.

"We just don't provide much value to a AA-rated manufacturing company," Mr. Rosholt admitted. First National Bank of Chicago's long-term debt is rated A-plus by Standard & Poor's Corp.

Some bankers and industry observers believe that if nothing else changes, U.S. banks may find themselves withdrawing from the standby market altogether.

Many of the banks surveyed by the *American Banker* said that standbys are for the most part now done by banks in customer relationships, rather than as an independently marketed corporate finance tool.

"Our standby-letters-of-credit business follows our corporate book of business relationships," an executive from one superregional bank said. But disadvantages that may result from risk-based capital guidelines "may take domestic banks out of the letter-of-credit market," the executive said.

Pricing 'Ludicrous'

With current aggressive competition, pricing is all over the board. "We can bid on a standby and be off by a margin of 100 basis points. It's ludicrous," the executive said. "The Japanese will frequently quote 20 to 25 basis points and we're looking for 1%. And other money center banks may be quoting 2%."

Sometimes, of course, money center banks quote very high rates to discourage business. And if a customer is willing to pay 2% for a standby letter of credit, a healthy profit can result. Overall, industry sources said, standby letters of credit require relatively little paperwork and are still considered a profitable business.

Meanwhile, there is concern that the Fed's risk-based capital guidelines do not take into consideration the varying degrees of standby credit risk. "If the regulators are going to be really consistent, then they should look at each standby the way they look at each loan," the executive at the superregional said. "Some are satisfactory, some are substandard, some are losses. It's the same with standbys."

Japanese banks, meanwhile, challenge the perception that they enjoy success with standby letters of credit simply because they can "buy it" by undercutting the domestic banks. They say they have succeeded in the business because they can offer things U.S. banks cannot.

A large part of the standby business booked by Japanese banks is backing debt instruments, such as industrial revenue bonds for municipalities and government agencies. While some domestic banks shun this business because it doesn't result in long-standing customer relationships, the Japanese eagerly pursue it.

"We Japanese banks think municipal risk is a very good risk. By expanding this business, we have a good relationship with municipalities," said Hideyuki Saka, vice president of Fuji Bank, New York branch.

And Fuji sees potential for more customer banking activity, Mr. Saka said.

"Now the municipalities are looking for possibilities to raise funds in Tokyo and Europe," he said. "We have a keen interest in helping them do that. We see future possibilities to work with them."

Mr. Saka said the Japanese banks also are interested in providing American cities and townships with the financial assistance they need.

"We have a keen interest to help in the fundamental support in the U.S.," he said. "We are happy to know that Japanese banks are helping America's infrastructure."

He acknowledged that Japanese banks aggressively seek standby business and are very competitive on pricing. But, he said, "we look aggressive compared only with banks in the U.S."

Contingent Liabilities

Japanese banks, unlike U.S. banks, are eager to put more contingent liabilities on their books, Mr. Saka said. Many U.S. banks, he said, have "lost interest" in backing letters of credit because the banks already have too many contingent liabilities. At the end of 1986, Fuji Bank, New York branch, had outstanding standbys of $2.5 billion, Mr. Saka said.

Perhaps most important, however, is that Japanese banks are not subjected to the same primary capital requirements as U.S. domestic banks. But in the next two or three years, Mr. Saka said, he expects Japan will join the U.K.-U.S. agreement on common capital standards.

Despite the wide variance in price that may be quoted by a U.S. bank and a Japanese bank for the same product, Mr. Saka said Japanese banks are concerned about risk exposure and are being adequately compensated for the credit risk they are assuming.

"The Japanese are very conservative and always are very concerned about credit exposure," he said.

Meanwhile, Mr. Saka said, with fewer industrial revenue bonds being issued because of recent changes under the new tax law, the demand for standby letters of credit will also decline.

"Our opportunity to provide standby letters of credit is reduced. This is a very serious problem," Mr. Saka said, "and it will be difficult to find good transactions."

With less business, competition for standby business is likely to become more intense — and perhaps too stiff for U.S. banks.

"I think this is a good business," one executive said. "We would miss it. It's one more piece of business that is part of a relationship." ■

Bank Call Notice

REPORT OF CONDITION OF

Consolidated domestic subsidiaries of the

Bessemer Trust Company, National Association

of New York

In the state of New York, at the close of business on December 31, 1986, published in response to call made by Comptroller of the Currency, under title 12, United States Code, Section 161. Charter number 16417 Comptroller of the Currency Second District.

ASSETS		Dollar Amounts in Thousands
Cash and balances due from depository institutions:

LEGAL ADVERTISING

Partnership Notices

Certificate Pursuant to Section 130 of the General Business Law, STATE OF NEW YORK,) SS: COUNTY OF NEW YORK). WHEREAS, the undersigned have this day formed a new partnership under the name of Nico & Co., with its principal place of business at 55 Water Street, New York City, New York; We, the undersigned, do hereby certify and declare that the persons intending to deal as partners under such partnership name Nico & Co. at 55 Water Street, New York City, New York, with their respective places of residence are as follows: James Canale, 27 Winnie Lane, Brentwood, NY 11717; Wilfredo Cuevas, 1138 E. 51st Street, Brooklyn, NY 11234; Robert Hendley, 2736 Bath Avenue, Brooklyn, NY 11214; Angelina Madera, 10-02 Rive Road, Fairlawn, NJ 07410; Kenneth Peters, 1251 37th Street, Brooklyn, NY 11218; Louis Raysor, 1049 Lincoln Place, Brooklyn, NY; Victor Scioscia, RD1, Box 172, Ridge Road, Dover Plains, NY 12522; Barbara Strohmeier, 3 Kubala Avenue, Carteret, NY 07008; Paul V. Vera, 559 54th Street, Brooklyn, NY; Leonard S. Wronski, 35 Lake Avenue, Colonia, NJ 07067; George Ziemer, 8 Sandhill Road, Byram Township, NJ 07874. And we do further certify that the undersigned are the successors in interest to the partners and partnership that have heretofore used the name aforesaid in the conducting of business at 55 Water Street, New York City, New York.

Henkel . . .

➸ Continued from Page 2

ments, and Stanford Savings and Loan of California, with $26 million. The memo was obtained and released to the press by the Senate Banking, Housing, and Urban Affairs Committee.

"It's another example of the Bank Board giving out half the facts," responded Mr. Henkel, who still faces a Senate confirmation hearing.

Mr. Henkel said Bank Board data show that 186 institutions might have problems with the current grandfathering clause, which he says is vague.

The Bank Board is in the process of deciding whether the 1985 direct investment rule should be extended for two more years or eased.

Mr. Henkel was a partner in an Atlanta law firm that did legal work for Lincoln Savings. He was supervising attorney for the client, according to a financial disclosure form.

The same form shows that Mr. Henkel personally borrowed over $250,000 from Lincoln in 1985 but paid it off before the Oct. 9, 1986, filing of the financial disclosure. Published reports claim real estate companies in which Mr. Henkel had interests borrowed more than $61 million from Lincoln.

"My proposal dealt with the grandfathering of real estate projects. Lincoln's argument with the Bank Board concerns a service corporation. In no way did I intend to help Lincoln," Mr. Henkel said. ■

A letter of credit is a document issued by a bank on behalf of its customer (the account party) authorizing a third party (the beneficiary), or in some cases the account party, to draw drafts on the bank up to a stipulated amount with specified terms and conditions. The letter of credit is a conditional commitment on the part of the bank to provide payment on drafts drawn in accordance with the terms of the document. There are four types of letters of credit: (1) commercial letters of credit; (2) letters of credit sold for cash; (3) travelers' letters of credit; and (4) standby letters of credit. **A standby letter of credit** represents an obligation on the part of the issuing bank to a designated third party (the beneficiary) contingent upon the failure of the issuing bank's customer (the account party) to perform under the terms of the underlying contract with the beneficiary, or obligates the bank to guarantee or stand as surety for the benefit of a third party to the extent permitted by law or regulation. **The source of the data is the federal regulatory** Report of Condition, Schedule RC-L—Commitments and Contingencies, items 6.a.(1) and item 6.a.(2), which are the sum of standby letters of credit and foreign office guarantees to U.S. customers plus non-U.S. customers. The amounts outstanding and unused as of the report date are reported. Also included are all legally binding commitments to issue standby letters of credit. According to the instructions to the Report of Condition, originating banks must report the full amount outstanding and unused of standby letters of credit in which participations have been conveyed to others where: (1) the originating and issuing bank is obligated to pay the full amount of any draft drawn under the terms of the standby letter of credit and (2) the participating banks have an obligation to partially or wholly reimburse the originating bank, either directly in cash or through a participation in a loan to the account party. For syndicated standby letters of credit where each bank has a direct obligation to the benefeciary, each bank must report only its share of the syndication. Similarly, if several banks participate in the issuance of a standby letter of credit under a "bona fide" binding agreement, each bank shall report only its proportional share of the total standby letter of credit. For a standby letter of credit that is, in turn, backed by a standby letter of credit issued by another bank, each bank must report the entire amount of the standby letter of credit it has issued and not just the unbacked portion. **Primary capital** is sum of equity capital; the allowance for loan and lease losses; mandatory convertible debt; and the minority interest in equity accounts of consolidated subsidiaries. (Note: the definition of primary capital differs slightly from the definition used by American Banker in its ranking of the top 100 banks in primary capital published on Oct. 8. For some banks, the 6/30/86 primary capital figure shown here may differ from the figure reported on Oct. 8. But the differences do not affect significantly the ratios of standby letters of credit to primary capital— **SLC/Primary Capital**— reported above.) Data were provided by **ADP Data Services Division, New York.** ADP adjusts its data base for mergers.

Speaker Backs Scaled-Down Aid for FSLIC

Wright Also Wants to Keep More Ailing Thrifts Afloat

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — House Speaker Jim Wright on Monday endorsed a rescue proposal for the Federal Savings and Loan Insurance Corp. that would give the agency less new money than it has sought and require regulators to go easy on failing thrifts.

"We don't want to give them $15 billion to go out there and close down an enormous lot of institutions," said Mr. Wright, whose home state of Texas has a particularly large number of ailing thrifts.

Instead, he added, Congress will "replenish the fund with a lesser amount and watch to see how it is handled."

Siding with the U.S. League of Savings Institutions and against the Reagan administration, Mr. Wright also said he will support an amendment being drafted by Rep. Steve Bartlett, R-Tex., to require regulators to give ailing thrifts time to work out their problems.

Because Mr. Bartlett's amendment would give the recapitalization measure the support of the speaker, it is likely to prove the key factor in determining whether any version of the FSLIC rescue plan makes it through the House.

The administration has proposed a recapitalization measure that would give the FSLIC $15 billion to use immediately. The U.S. League, the thrift industry's major trade group, offered an alternative that linked a smaller cash infusion — $5 billion a year in each of the next two years — to a forbearance requirement.

Dealing a blow to the administration

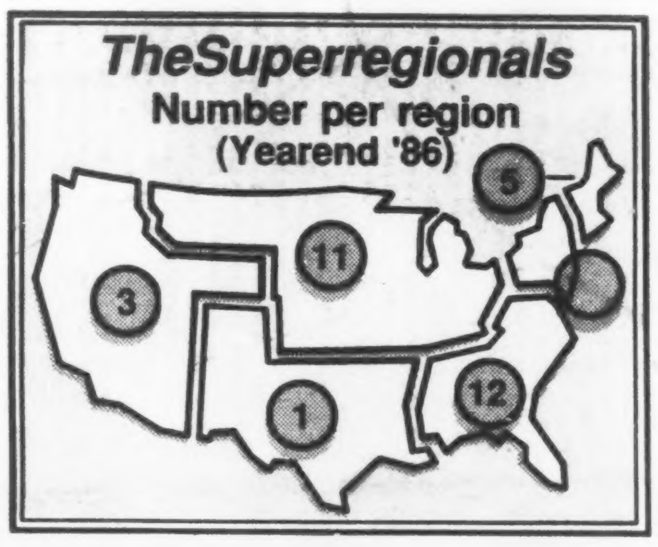
Mergers Spark 23% Jump In Superregionals' Assets

New England, Southeast Grow Fastest

By L. MICHAEL CACACE

NEW YORK — Sparked by a wave of interstate merger deals, total assets of the nation's "superregional" banking firms grew by more than 23% in 1986. The two fastest-growing regions were New England and the Southeast, where assets grew by almost 34%.

These are some of the findings of a new *American Banker* survey that tracks the growth of the nation's newly developing superregional banking firms. The survey, which is published today, identifies the superregionals and looks at their size in terms of assets and deposits and at their profitability in terms of net income, net income per share, and the returns on assets and equity.



A superregional, as defined by the *American Banker*, is a nonmoney center banking company that is ranked

FNB Plans Out-of-State De Novo Bank

Special to the American Banker

HERMITAGE, Pa. — The $800 million-asset FNB Corp. is planning to open a de novo bank in Chardon, Ohio, subject to approvals of the Federal Reserve Board, the Federal Deposit Insurance Corp., and the banking authorities of Ohio and Pennsylvania.

Interstate Banking

Peter Mortensen, president and chief executive officer of FNB, said the venture is a first of its kind in two ways: It is the first move by a Pennsylvania bank holding company into Ohio under new reciprocity legislation, and it is the first de novo application by a Pennsylvania bank holding company into another state.

FNB is the parent of First National Bank of Mercer County, Hermitage, Pa.; Bucktail Bank and Trust Co., Emporium, Pa.; and Reeves Bank, Beaver Falls, Pa. It also owns Metropolitan Savings Bank, Youngstown, Ohio, an Ohio-chartered thrift acquired in 1986 following the crisis of privately insured savings and loans in Ohio. FNB also owns Citizens Budget Co., a consumer loan company in Youngstown, which it purchased in 1975.

The de novo bank in Chardon would be called First County Bank. A community of about 25,000, Chardon is about 40 miles east of Cleveland.

Mr. Mortensen said the trading areas of Youngstown and Chardon adjoin those of FNB's Pennsylvania banks. ■

A supperegional banking firm: A non-money center banking company that is ranked among the top 100 banking firms in total assets and has merged across sate lines to establish a full commercial banking presence in another state. **Net Income** is income after taxes and minority interest, but before preferred dividends, extraordinary items and significant transactions. Excluded is income from discontinued operations. **R.O.A.**—Return on average assets, which is net income for the year divided by average assets, as calculated by the respective banking firms. **R.O.E.**—Return on average equity capital, which is net income for the year divided by average equity capital, as calculated by the respective banking firms. **Earnings per share** for 1986 and 1985 are net income per common share of stock outstanding on a fully diluted basis, as reported in the banks' 1987 earnings releases. Except for earnings per share, all 1985 data are as reported by the banks in 1986, and have not been restated for mergers occurring in 1986. **(a)**— Net income excludes $14.8 million from the gain on the sale of Kissell Co. **(b)**— The net income for both 1985 and 1986 is net income from continuing operations but before extraordinary items. The ROA and ROE and earnings per share are based on this measure of net income. **(c)**— Formerly known as Midlantic Banks, Inc. Name was changed on Jan. 30, 1987, to reflect the consolidation of Midlantic Banks Inc. with Continental Bancorp., Philadelphia. **(d)**— The net income for 1986 is net income from continuing operations but before extraordinary items. **(e)**—R.O.E. for both 1986 and 1985 are based on total equity capital. **(f)**—Formerly known as Bank of Virginia Co. Changed title July 14. **(g)**—ROA and ROE for 1986 are preliminary. **(h)**—Earnings per share, ROA, and ROE for 1986 have been calculated by the American Banker, using net income before extraordinary items. Also, in the process of acquiring Valley Utah Bancorp., Salt Lake City, and California Valley Bank, Fresno. **(†)**— ROA calculated by dividing the group's net income by their average assets. Average assets are calculated by summing the group's total assets on 12/31/86 and 12/31/85 and dividing by 2.

Interstate Mergers Spark 23% Jump in Superregionals' Assets

➸ Continued from Page 1

among the top 100 banking firms in total assets and has merged across state lines to establish a full commercial banking presence in another state. Thirty-eight banks met these criteria in 1986 — five in New England, six in the Mid-Atlantic states, 12 in the Southeast, 11 in the Midwest, three in the West, and one in the Southwest.

Security Pacific Corp., Los Angeles, is the largest superregional, with assets of $62.6 billion at yearend. Security Pacific. acquired Arizona Bancwest Corp., Phoenix, in October.

The most profitable superregional — as measured by the return on average assets and the return on average equity capital — is Fleet Financial Group Inc., Providence, R.I., with an ROA of 1.37% for 1986, and an ROE of 20.05%.

The superregional with the largest growth in assets was Hartford National Corp., Conn., whose assets rose by more than 66%, to $13.9 billion, as it completed five interstate deals in 1986.

The superregionals of the Southeast, as a group, were the most profitable. The 12 banks in that region had a combined ROA of 1.03%. The six banks of the Mid-Atlantic states were next, with a combined ROA of 0.94%.

The superregionals of New England had the largest growth in net income. The net income of the five banks in the region was up by almost 40%, to $733.9 million, in 1986. The five banks of the region had a combined ROA of 0.90%.

Of the 38 superregional banks, 28 were involved in major interstate banking deals in 1986. These banks are listed below by region.

New England

Four of the five New England superregionals were involved in interstate deals.

- Bank of New England Corp., Boston, which is in the process of expanding within Massachusetts by acquiring the Conifer Group, Worcester, acquired Aroostook Trust, Caribou, Maine.
- Hartford National Corp. completed five interstate deals in 1986, acquiring People's Bank, Johnston, R.I., on Dec. 31; First New England Bankshares Corp., Taunton, Mass., and Charter Financial Corp., Framingham, Mass., in November; First Bank of Massachusetts, Chelmsford, Mass., in August; and Provident Institution for Savings, Boston, in April.
- Fleet Financial Group acquired First Connecticut Bancorp, Hartford, and Merrill Bankshares, Bangor, Maine.
- Shawmut Corp., Boston, acquired Fidelity Trust, Stamford, Conn.

Mid-Atlantic

In the Mid-Atlantic region, four of the six banks were involved in interstate merger deals last year.

- Marine Midland Banks Inc., Buffalo, N.Y., announced plans to acquire First Pennsylvania Corp., Philadelphia, when that becomes permitted under Pennsylvania law.
- PNC Financial Corp., Pittsburgh, signed a definitive agreement to merge with Citizens Fidelity Corp., Louisville, Ky., last June. Consummation of the transaction is subject to a number of conditions, including approval by the shareholders of both companies and regulatory authorities.
- CoreStates Financial Corp., Philadelphia, acquired New Jersey National Corp., Pennington, N.J., in October.
- Midlantic Corp., Edison, N.J., completed its merger with Continental Bancorp., Philadelphia, last month.

Southeast

In the Southeast, 10 of the 12 banks completed interstate deals.

- NCNB Corp., Charlotte, acquired Bankers Trust of South Carolina, Columbia, and National Bank of Florida, Miami.
- First Union Corp., Charlotte, completed its acquisitions of Georgia-based First Railroad & Banking Co.; Bank of Waynesboro; and Georgia State Bancshares Inc., in the fourth quarter.
- SunTrust Banks, Inc., Atlanta, acquired Third National Corp., Nashville, on Dec. 29.
- Citizens and Southern Corp., Atlanta, acquired Citizens and Southern South Carolina Corp., Columbia, on March 31.
- Sovran Financial Corp., Norfolk, acquired Suburban Bancorp., Bethesda, Md., and D.C. National BanCorp., Washington, D.C.;
- Maryland National Corp., Baltimore, following approval by the Federal Reserve Board, is expected to complete its merger with American Security Corp., Washington, D.C., in the first quarter of 1987.
- Signet Banking Corp., Richmond, formerly known as Bank of Virginia Co., acquired Security National Corp., Washington, D.C., in August.
- United Virginia Bankshares Inc., Richmond, acquired Bank of Bethesda, Md., in April.
- First American Corp., Nashville, acquired First Ashland Corp., Ky., during the first quarter of 1986.
- Dominion Bankshares Corp., Roanoke, completed its acquisition of Tennessee-based Nashville CityBank and First National Bank, Sparta, in January 1987.

Midwest

In the Midwest, seven of the 11 banks were involved in interstate deals.

- NBD Corp., Detroit, acquired Midwest Commerce Banking Co., Elkhart, Ind., and is in the process of acquiring US Ameribanc Inc., Highland Park, Ill.
- Banc One Corp., Columbus, announced that its merger with American Fletcher Corp., Indianapolis, was completed on Jan. 26, 1987.
- AmeriTrust Corp., Cleveland, completed deals with the following Indiana-based banking companies during 1986: First Indiana Bancorp, Elkhart; American Ligonier Bancorp Inc.; State Bank of Lima, Howe; Union Banc Corp., Kokomo; Central Indiana Bancorp Inc., Fairland; and Boone Corp., Lebanon.
- Boatmen's Bancshares Inc., St. Louis, acquired General Bancshares Corp., St. Louis, in March. General Bancshares owned 11 banks operating in Missouri, Illinois, and Tennessee.
- First of America Bank Corp., Kalamazoo, Mich., in the latter part of 1986 acquired First Bancorp of Indianapolis; First LaPorte Financial Corp., LaPorte, Ind.; and Premier Bancorp., Libertyville, Ill.
- Huntington Bancshares Inc., Columbus, acquired Central Bancorp, Danville, Ind.; Wainwright Financial Corp., Noblesville, Ind.; and Kasco Financial Corp., Warren, Mich.
- Marshall & Ilsley Corp., Milwaukee, acquired Thunderbird Capital Corp., Phoenix, in October.

West

Three of the four banks in the West and Southwest regions were involved in interstate deals last year.

- Security Pacific Corp., as mentioned above, completed its acquisition of Arizona Bancwest Corp., Phoenix, in October.
- Rainier Bancorp., Seattle, acquired Lincoln Savings & Loan Association, Portland, Oregon, as well as Washington-based United Bank, Tacoma, a savings bank.
- Valley National Corp., Phoenix, was in the process of acquiring Valley Utah Bancorp., Salt Lake City, and California Valley Bank, Fresno. ■

American Banker Ranks Top 10 Superregional Banks

Based on Total Assets on December 31, 1986

(In Billions of Dollars)

Hawaii Banks, Thrifts Stage Rate War

Special to the American Banker

HONOLULU — Responding to consumers' complaints and each other's moves, Hawaiian financial institutions last week became locked in a credit card war that resulted in interest rate reductions.

The competitive display began on Feb. 1 when the Bank of Hawaii, the largest financial institution in the state, announced in a front page story in the local morning newspaper, *The Honolulu Advertiser,* that it was trimming its Visa card rate from 18% to 16.8% starting March 1.

The credit card rate reduction was the first to be made locally, and it also made Bank of Hawaii's credit card rate the lowest of any commercial bank here.

The distinction, however, was short-lived.

In a classic case of competitive forces at work, the rival First Hawaiian Bank, the state's second largest, responded at the beginning of last week with the revelation that it was dropping its MasterCard rate to 16.5%.

Immediately, Bank of Hawaii announced that it would match the drop to 16.5%. That set off a quick chain reaction as other banks followed suit.

By the end of the day, the Central Pacific Bank and the Bank of Honolulu had announced that they too were dropping their credit card interest rates to 16.5%.

By the end of last week, several other financial institutions had done the same.

The International Savings & Loan Association and the City Bank, which services International's credit cards, also matched the banks' moves down to 16.5%. One local credit union, Oahu One, went so far as to drop its Visa rate from 16.9% to 14.9%.

The First Nationwide Bank, which has 19 offices in Hawaii, said it was dropping its rate to 16.9%. First Nationwide also said, however, that it would raise its annual fee from $18 to $24.

Other financial institutions, however, left their annual fees intact, at least for the moment.

The First Interstate Bank of Hawaii said it was "studying the situation," but a spokesman said that the First Interstate Bancorp — of which the local bank is a franchisee — is adopting a variable credit card rate pegged at nine points above prime.

The spurt of credit card activity was the first acknowledgment by Hawaiian banking institutions of growing discontent on the part of consumers who complain that credit card rates are out of line.

While other interest rates have dropped dramatically in recent months, credit card rates generally have stayed at high levels and issuers have maintained additional annual fees for cardholders.

Bank of Hawaii, meanwhile, indicated that it was prepared to drop its rates further to remain competitive. A bank spokesman said the reduction reflected an "ongoing effort" by Bank of Hawaii to be "as competitive as possible." ■

Proxmire Postpones a Vote On His Omnibus Banking Bill

By JAY ROSENSTEIN
Washington Bureau

WASHINGTON — Chairman William Proxmire of the Senate Banking Committee has postponed a committee vote on his omnibus banking bill for another week, an additional sign that the legislation in its present form may be in trouble.

The Wisconsin Democrat had planned to have the committee vote on the bill on Wednesday of this week. After a meeting Thursday with committee members, the chairman now has set a March 5 date for considering the bill and likely amendments to it.

Provisions of the Proxmire bill include:

- A $7.5 billion short-term recapitalization plan for the ailing Federal Savings and Loan Insurance Corp.
- Emergency powers to permit federal regulators to merge failed and failing banks across state lines.
- Closing a loophole in banking law that has permitted the growth of limited-purpose nonbank banks.
- Giving banks the right to underwrite revenue bonds, mortgage-backed securities, and commercial paper, and to distribute mutual funds.
- New limits on check-hold periods.
- A section extending the conservatorship authority of the National Credit Union Administration.

Mr. Proxmire organized a combination pep rally-press conference Friday to discuss the bill and make another push for closing the nonbank-bank loophole. Following his brief remarks, representatives of several financial, consumer, and small-business groups that oppose nonbank banks spoke

Hallwood Group Relied on Cairns And Perseverance to Win BancTexas

By DAVID LaGESSE
Southwest Bureau

DALLAS — The Hallwood Group Inc., a New York-based merchant banking firm, had to overcome the initial skepticism of both the BancTexas Group and federal regulators before successfully structuring a bailout of the financially strapped bank holding company last week, according to negotiators involved in the deal.

They cited three factors that brought the deal to a close: the perseverance of Hallwood; an unusual transaction that appealed to regulators; and the behind-the-scenes efforts of James G. Cairns, a prominent banker now working for Hallwood.

Regulators announced a tentative agreement last Thursday that would bring $150 million in federal assistance to BancTexas, as well as $50 million in new capital through a stock offering by Hallwood.

The agreement ended nine months of sporadic negotiations involving Hallwood, BancTexas, and the Federal Deposit Insurance Corp. With some $1 billion in assets, BancTexas owns 11 subsidiary banks — several of which stood on the brink of failure before the deal was struck with Hallwood.

"It was the persistence of Hallwood that kept this deal alive," said Margery Waxman, a Washington attorney who represented BancTexas in the negotiations.

More Problems For Thrift with Regulator Link

Lincoln Savings' Profits Decrease Sharply in 1986

By ROBERT LUKE
West Coast Bureau

LOS ANGELES — The thrift holding company that has come under fire in Washington for its business ties to a member of the Federal Home Loan Bank Board is facing new problems closer to home.

Last week, the American Continental Corp. and its principal subsidiary, the Lincoln Savings and Loan Association, Irvine, Calif., both reported sharply lower profits in 1986 from a year earlier.

Lincoln, whose officials have opposed many of the Bank Board's policies, has financed the business deals of one of the agency's newest members, Lee Henkel. That relationship is under scrutiny by congressional committees to which falls the task of confirming Mr. Henkel for the job.

The controversy heated up last fall when Mr. Henkel proposed relaxing the Bank Board's limits on direct investments. Lincoln is heavily involved in direct real estate and other investments.

American Continental, based in Phoenix, blamed the drop in 1986 profits on an extraordinary loss of $6.6 million, or 53 cents a share, from premiums paid and deferred issue expenses written off because of the early retirement of about $214 million of higher-rate debt.

No officials of either American Continental or Lincoln, which is based in Irvine, Calif., could be reached for comment.

Branch Cuts Seen Hurting Minorities

By LAURA GROSS

NEW YORK — Closing inner-city bank branches discriminates against low-income, black, and Hispanic consumers, according to a report just released by the Community Training and Resource Center, a consumer advocacy group that investigated closings in New York City from 1977 to 1984.

"Branch closings disproportionately occurred in lower-income neighborhoods and neighborhoods where blacks and Hispanics are in the majority," said a press statement issued by the organization. It found that most branch openings were in the suburbs.

The report comes down hard on New York State and federal regulators, calling for greater government concern and more regulation of branch banking issues.

Margaret Stix, author of the report, warned in an interview Friday that "the situation could get worse in light of additional branch closings to occur this year, particularly by Chase Manhattan Bank, which has announced that they will close up to 50 branches in 1987."

Ms. Stix said 89% of closings during 1977-84 were done by commercial banks, mostly Chase, with 39% of that total; Manufacturers Hanover Trust Co. with 25%, and Citibank, with 22%. The closings occurred during a time of extreme hardship for savings institutions, which nonetheless shut far fewer branches than commercial banks.

Among the charges and recommendations included in the 101-page analysis are:

- State government response to the branch closings issue has been inadequate. The Banking Department has failed to maintain an accurate inventory of branch services or even to keep an accurate list of branches that have closed.
- Federal regulators have failed to respond credibly to the branch closing phenomenon.
- New York State supervisory proce-

Corrections

The record date for Fleet Financial Group Inc.'s two-for-one stock split was incorrectly reported in the Feb. 12 "In the News" column (page 3) due to an erroneous press release. The correct date is March 15, 1987.

□

A table on mutual-to-stock conversions of thrift institutions on Feb. 13 (page 9) gave an incorrect location for Standard Federal Bank. The institution is located in Troy, Mich.

□

The table "Who's Who in Video Banking Nationwide" on page 8 of the Feb. 2 issue showed incorrectly that California First Bank planned a video banking service using the Princeton TeleCom system. The bank says it has no relationship with Princeton TeleCom. Also, it does have a telephone bill paying service in its San Diego region, which the table did not indicate.

□

Sovran Financial Corp., Norfolk, Va., had the ninth best return on average assets in 1986 among the nation's superregional banking firms. Sovran was inadvertently omitted from a summary table identifying the top 10 superregionals in 1986 ROA. (Feb. 10, page 14.) ■

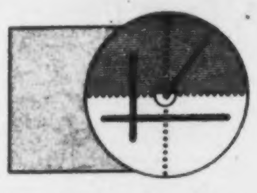
Wells Chief Sings Praises of California

Reichardt Stumps for Firm to Be Viewed as Regional Bank

By NINA EASTON
West Coast Bureau

LOS ANGELES — The San Francisco-based Wells Fargo & Co. wants to expand its presence in southern California, possibly by purchasing savings and loans, Carl E. Reichardt, Well's chairman and chief executive officer, said last week.

However, Mr. Reichardt said that a new Federal Savings and Loan Insurance Corp. policy of imposing an "exit fee" on thrifts that leave that agency's fund, which insures savings and loans and federal savings banks, may make S&L acquisitions too expensive for Wells.



Corporate Strategy

Banks that acquire thrifts typically convert them to commercial banking subsidiaries that are insured by the Federal Deposit Insurance Corp. But FSLIC officials are fearful that the departure of healthy thrifts will further weaken the ailing insurance fund, and the agency has begun charging stiff exit fees. This policy has been ruled illegal by one federal court.

Mr. Reichardt spoke at a financial industry conference sponsored by San Francisco's Montgomery Securities. He confirmed that Wells Fargo had considered buying one of several large insolvent thrifts in California that are now operating under the purview of the federal government. But, he said, Wells has not put forward a bid on any of those institutions.

"We've looked at acquiring a failing institution in another state as a trade" that would enable Wells to buy a healthy thrift here, Mr. Reichardt added. However, he indicated that no progress had been made on that initiative.

In a wide-ranging talk to securities analysts on Thursday, Mr. Reichardt also reiterated his strategy of focusing on the California market at a time when competitors are moving across state borders. He did not, however, rule out the possibility of acquiring an out-of-state bank when regional interstate banking comes to California in July.

Mr. Reichardt has maintained a low profile as the head of the $4.6 billion-asset bank holding company, and it is only infrequently that he makes public his views. But the Wells Fargo chairman provided a number of candid insights into his company's strategy:

- Wells Fargo will emphasize its personal trust operations. Mr. Reichardt indicated that Wells Fargo's planned purchase of BankAmerica's personal trust operations for $100 million would not be the company's last acquisition in that area. "As a business, we are finding [personal trust] much more attractive as time goes on, particularly with the econo-

But Butcher Says Chase May Not Remain a Bank at All

By ROBERT TRIGAUX
Washington Bureau

WASHINGTON — For Chase Manhattan Corp. chairman Willard Butcher, the more his bank looks at its charter, the less interesting it becomes.

"If we won't be Chase Manhattan Bank, we'll be Chase Manhattan Securities Corp.," the Chase executive said here last week.

Mr. Butcher's remarks brought up to date the public warning first issued last October by Chase president Thomas G. LaBrecque that the New York bank holding company was studying the idea of dropping its bank charter. Mr. Butcher, in town to lobby U.S. senators for expanded banking powers, told a gathering of the business press that thus far Chase's review of its charter was not promising.

"The more we study it, the less we find it of interest to be a bank."

Chase Manhattan Corp. is the third largest U.S. banking company, with $95 billion in assets at the end of last year. It is one of several large bank holding companies that say they are examining ways to restructure without a bank charter — and without the accompanying regulatory restrictions. Citicorp and J.P. Morgan & Co. are among the money center banks that are at least considering the costs and benefits of such a reorganization.

Mr. Butcher chose to quantify the benefits for Chase. "We earned $585 million as an institution [last year]," he said, with a large percentage of earnings coming from Chase's credit card and foreign exchange operations. If it had not been a bank, Chase would have earned between $595 million and $600 million, he said. Thus, banking functions "cost" Chase $10 million to $15 million, according to Mr. Butcher.

Chase would prefer to remain a bank, but will be forced to get out of the business if it cannot fully participate globally in fast-growing securitization and other businesses. "The profit in our business is in that," he said.

Mr. Butcher cited Japan's Nomura Securities, West Germany's Deutsche Bank, and Wall Street's Salomon Brothers as competitors of Chase. "Our clients are going to people" such as these, he said, who can offer the widest services.

Mr. Butcher's arguments are not new, but Chase is increasingly going public to make these points, reflecting the intense frustration among senior banking officials who feel their companies are losing ground to investment banks and foreign financial firms.

It also is a political message to Congress and bank regulators that Chase and other banking companies may someday peddle their services as diversified financial firms if their U.S. banking charters do not become more valuable than they are now.

Mr. Butcher visited Capitol Hill to express these views and to endorse the first round of Senate Banking Committee Chairman William Proxmire's banking legislation. None of the congressmen Mr. Butcher visited shared his "way of thinking," he said.

The Chase executive also elaborated on his Feb. 19 letter to Sen. Proxmire endorsing the Senate banking legislation. The omnibus bill, among other things, would help recapitalize the Federal Savings and Loan Insurance Corp., require the disbanding of nonbank banks not established by July 1983, and give new securities powers to commercial banks.

On Friday, sources said some provisions of the Proxmire bill — including the grandfather dates for nonbank banks and mutual funds powers for banks — may be changed before the scheduled March 5 markup by the Senate Banking Committee.

CrossLand Takes Steps to Live Up to Its Name

By MARK BASCH

NEW YORK — When the Metropolitan Savings Bank became CrossLand Savings FSB in 1985, it said the change reflected "both achieved and projected geographic expansion."

But the New York savings bank had confined its retail operations to the East Coast until last week, when it began to move "cross land" with an agreement to acquire a thrift with offices in four western states.

CrossLand announced an agreement in principle to acquire the troubled Western Savings and Loan Co., a $400 million-asset thrift based in Salt Lake City. In addition to Utah, Western has branches in California, Oregon, and Washington.

CrossLand already operates a mortgage banking subsidiary based in Salt Lake City. The thrift acquired First Security Realty Services Corp. from First Security Corp. last summer for $37 million in cash. The unit, renamed the CrossLand Mortgage Corp., has offices in 12 states.

Besides New York, the $10.1 billion-asset CrossLand has retail offices in northern Virginia and Florida. "We want to be a nationwide presence," said CrossLand vice chairman Frank A. Dellomo.

In a recent interview, CrossLand chairman Luke A. Baione hinted that the thrift soon would undergo its long-planned geographic expansion. "We're looking now at acquisitions both within the industry and outside the industry," he said. "They would put the bank in a unique position compared with any other thrift, and even compared with other commercial banks."

In New York, CrossLand is dwarfed by the money center banks, but Mr. Baione feels that it can escape that shadow by expanding outside the city. "Visualize us in New York and we're not a giant. Visualize us around the country and we're the 42d largest [financial institution]," he said.

CrossLand needed capital to expand. It raised $116 million by converting from mutual to the stock form of ownership in October 1985. "From a management point of view, the simplest type of operation to have is a mutual," Mr. Baione said. "If you want to grow and expand the operation, you're going to have to go that route [conversion]."

CrossLand also raised capital in 1985 by selling its mort-

Security Pacific's $1.15 Billion Offer Wins Over Seattle's Rainier Bancorp.

By NINA EASTON
and MIKE PARKS

Interstate Banking

Rainier Bancorp., Washington State's largest independent bank holding company, will be swallowed by Security Pacific Corp., Los Angeles, in a deal valued at $1.15 billion, officials at both banks said Tuesday.

In securing an agreement from Rainier, Security Pacific edged out First Bank System Inc., Minneapolis, which also forwarded a bid. Rainier confirmed Monday that it was considering proposals from two large out-of-state companies.

The acquisition of the $9.2 billion-asset Seattle company — the third largest banking concern in the Pacific Northwest — is a major coup for Security Pacific, which has been aggressively moving into other states since interstate banking prohibitions began crumbling in the West.

"This creates a regional powerhouse," said Paul H. Bastaad, an analyst with Warburg Rowe & Pitman Akroyd Inc. in San Francisco. "Security Pacific has moved into all of the large economic areas of the West."

The merger will give Security Pacific a total of $72 billion in assets. It remains the sixth largest bank holding company in the country, but it is fast catching up to the fifth largest, Manufacturers Hanover Trust Co., which has $74.4 billion in assets.

Under the merger agreement, which is still subject to the approval of regulators and the shareholders of both companies, Security Pacific will exchange 1.3 shares of its own stock for each of Rainier's 20.9 million outstanding shares, as well as those Rainier shares that will be issued in its pending acquisition of United Bank in Tacoma, Wash. That deal is expected to close on March 15.

In late-afternoon trading Tuesday, Security Pacific's stock was at $38.25, down $2 from Monday's closing price of $40.25. At the Tuesday afternoon price, the value of the deal to Rainier shareholders would be about $49.75 a share.

Rainier's board of directors voted to approve the deal at 2 a.m. Tuesday after Richard J. Flamson 3d, Security Pacific's chairman and chief executive officer, spent all day Monday in Seattle meeting with board members. Security

Baker, Volcker Reassure Hill On Latin Debt

But Fed Chief Says Brazil Creates 'Sizable Problem'

Washington Bureau

WASHINGTON — Treasury Secretary James Baker and Federal Reserve Chairman Paul Volcker teamed up Tuesday to try to convince Congress that current rumblings among international debtors are under control.

Mr. Baker told a panel of the Senate Appropriations Committee that his strategy for resolving Third World debt problems is working. He also said he does not see Brazil's decision to suspend interest payments being followed by other debtor nations.

"We don't see this as something that is going to spread to a lot of other debtor countries," the Treasury secretary said. He expressed confidence that Brazil will resolve its payments situation by negotiating with private creditors.

Mr. Volcker, while taking the same general tone, said the Baker plan to stimulate Third World growth needs new life. And he told the Senate Budget Committee that Brazil's decision last Friday to suspend interest payments on its foreign debt is creating a "sizable" problem.

Mr. Volcker said that management of the debt problems in Latin America and some other developing countries "is again at a critical stage." He urged a renewed understanding by nations and officials wrestling with international debt that debtors and creditors must work together.

The Fed chairman conceded that some of the parties who have been dealing with Third World debt problems now suffer from "battle fatigue."

At his appearance, Mr. Volcker said he would be happy to work with the Brazilian government on a solution to its debt crisis, as long as the nation is working toward a responsible resolution to the problem.

"To fail in carrying through on past efforts or dealing with the new points of strain would plainly jeopardize past successes and threaten new strains on the financial system," Mr. Volcker testified.

Both Mr. Baker and Mr. Volcker represented the U.S. at a gathering last weekend of finance ministers and central bank governors at the Group of Five meeting in Paris Feb. 21. There, it was agreed that currency rates — especially the falling dollar — would be stabilized and that Japan and West Germany in turn would boost internal demand for goods and services to aid U.S. exports and lower the trade deficit.

In the spirit of that meeting, Mr. Volcker urged the Senate budget panel to support international economic cooperation, rather than protectionist trade legislation, as the best way to support global economic growth. Broad protectionist measures would drive up U.S. inflation and interest rates, damage growth abroad and "invite worldwide recession," he said.

Mr. Baker reiterated the Administration's program — commonly called the

Number of POS Terminals to Grow Tenfold by 1990

By JEFFREY KUTLER

NEW YORK — Growth in point-of-sale payment terminals is on the verge of exploding, with the probability of a tenfold increase by 1990, according to a study by Carmody & Co.

The Fort Lee, N.J., consulting firm, which specializes in electronic funds transfer systems, said that point-of-sale debit terminals will shrug off sluggish growth and expand to 178,000 in 1990 from a national total of 17,300 at mid-1986.

Carmody also predicted that national point-of-sale debit transaction volume will grow to $130.6 million per month in 1990, more than 30 times the $4.2 million in monthly transactions for 1986.

By 1990, supermarkets will overtake gasoline stations to have the largest number of terminals that move funds directly from a consumer's transaction account into a retail store's bank account.

Transactions at gas stations will continue to outnumber supermarket transactions in 1990, as they do today. But together these two retailing categories will account for three of every four electronic POS debits, the same as in 1986, the Carmody projections show.

Carmody derived the results from data compiled for clients over the past two years. They were most recently updated last fall, according to Nancy Grant, a partner in the firm.

Ms. Grant claimed that the projections are more valid than most because Carmody reconciled the conflicting opinions of banking network operators and retailers with research into consumer attitudes.

"This was very tough to do, because bankers and retailers have not been seeing eye to eye," she said. "Bankers tended to be more optimistic than retailers about the number of POS terminals they expected to install over three years. To the extent that the two industries can resolve some of their differences, the bankers' expectations might be seen as indicating a longer-term growth trend."

Growth in Point-of-Sale Debit Terminals

	Mid-1986			1990 (est.)		
Merchant Type	POS Devices	Share of Total	Monthly Trans. Per Terminal	POS Devices	Share of Total	Monthly Trans. Per Terminal
Supermarket	2,249	13%	200	74,760	42%	624
Retail gas	5,536	32%	475	30,260	17%	1,764
Convenience	1,384	8%	475	12,460	7%	1,470
Fast food	nil	<1%	200	17,800	10%	400
Others*	8,131	47%	60	42,720	24%	140
Totals	**17,300**	**100%**	**243**	**178,000**	**100%**	**734**

* Includes major retail stores, with 15% of terminals in 1986 and 4% in 1990.

Source: Carmody & Co.

Ms. Grant added, "We worked with electronic banking networks and retailers to bring their forecasts into line with each other. If they were far apart, we went back to them with information we gathered to come up with a more realistic conclusion. Then we factored in consumer research to determine what they know about POS debit and how they would respond to the service if offered."

Carmody counted 128 million bank debit cards in circulation as of mid-1986. Almost all were issued to permit access to automated teller machines, but financial institution executives regard them as the nucleus for point-of-sale debit programs such as that of Lucky Stores, the California supermarket chain that accepts ATM cards as the equivalent of cash.

Of those 128 million debit cardholders, 58 million said they would use their cards for electronic point-of-sale debits if available, and 34 million actually had access to the service in 1986, the survey showed. Relatively few consumers had used it, however.

Carmody said that 150 million people would have debit cards by 1990, of whom 84 million would use the payment service willingly and that 76 million actually would have access to it.

Retail gasoline stations accounted for 5,536, or 32%, of the 17,300 POS debit terminals as of mid-1986, compared with an anticipated 30,260, or 17%, of 178,000 units in 1990. The number of terminals they have will rise 446%, but their share of the total will be cut virtually in half.

Supermarkets will cause this contraction. They accounted for 13% of terminals in 1986, but that figure is projected to rise to 42% in 1990.

Retail gas stations' share of monthly transactions — 63%, or 2.6 million of 4.2 million nationally in 1986 — will drop to 40%, or 52.2 million of the projected 130.6 million in 1990. The transaction share of supermarkets will increase from 11% in 1986 to 35% in 1990.

In terms of transactions per POS terminal, both gas stations and convenience stores were handling 475 items per month last year compared with 200 at supermarkets, 200 at fast-food restaurants, and 60 at other outlets.

Carmody estimated that transactions per terminal at retail gas stations will rise to 1,764 monthly in 1990, followed by 1,470 at convenience stores, 624 at supermarkets, 400 at fast-food outlets, and 140 elsewhere.

Counting all checkout lanes, a supermarket might be handling 6,000 to 6,500 POS debits per store by 1990, up from 2,000 to 2,500 in 1986. These figures compare with 5,000 transactions per month at an average bank's automated teller machine.

Another recent survey by the newsletter *EFT Report* suggests that the predicted upsurge from the mid-1986 base line of 17,300 terminals as reported by Carmody & Co. may have begun already. The newsletter said 31,000 POS debit terminals were in place at the start of 1987. Lucky Stores alone had 4,500 devices in 450 of its supermarkets.

POS News, another newsletter, said the POS terminal count was up to 27,421 in January 1987 from 17,256 in June 1986, with 64,680 predicted by yearend. ■

Technology Topics

EDS SERVING GMAC: Electronic Data Systems Corp., Dallas, will provide all data processing, telecommunications, and systems development services to General Motors Acceptance Corp. under a five-year, fixed-price, full-facilities-management contract with options to extend to 10 years.

It is the largest contract that Electronic Data Systems, a subsidiary of General Motors Corp., has ever signed with a financial industry client.

EDS has been providing many of these services for GMAC since 1984. During that time, the data processor has installed or enhanced systems that enable GMAC to acquire funds, approve credit, issue investment notes, and arrange for leasing. According to GMAC's vice chairman, Gordon Samardich, these accomplishments contributed to the signing of this long-term contract.

FUJITSU'S COLOR GRAPHICS: United Savings of America has activated the color graphics capability on its Fujitsu ACT 4000 automated teller machines in six metropolitan Chicago locations. They are the first color ATMs in Illinois, according to Kevin R. Murphy, senior vice president of marketing at Fujitsu Systems of America, San Diego.

"We've added color graphics to enhance ATM usage," explained Jerome B. Toigo, senior vice president of administrative services at the $1.4 billion-asset United Savings of America.

"Color makes ATM screens easier to read by highlighting key information. In addition, the use of graphic symbols or 'icons' helps simplify the screen design. We've replaced many words with easy-to-understand symbols, enabling our customers to complete their banking transactions more quickly," Mr. Toigo added.

GULFNET EFT CONFERENCE: GulfNet, the Louisiana-based shared electronic banking network, has scheduled its second annual "EFT Showplace" meeting for March 25-26 at the Marriott Hotel in New Orleans. It falls the week before the Electronic Funds Transfer Association's "World EFT Showcase" to be held in Las Vegas.

The New Orleans program includes nationally prominent speakers on electronic funds transfer including: D. Dale Browning, president, Plus System Inc., and his counterpart, Bruce A. Burchfield, president, Cirrus System Inc.; Thomas O. Bennion, chairman of the Honor System in Florida; Donald Long, a 19-year veteran banking consultant with IBM Corp., and Thom Malin, vice president of sales for TransFirst Corp., Dallas, formerly Money Maker EFT Services.

For information, contact GulfNet, P.O. Box 60279, New Orleans, La. 70160, telephone 800-535-9659 (in Louisiana: 800-462-9511).

FUTURE OF THE ACH: A panel discussion on the future of the automated clearing house payments system will close the National Automated Clearing House Association's annual conference, March 15-18 in San Diego.

Panelists are Joseph P. Coricaci, senior vice president and treasurer, Continental Illinois National Bank and Trust Company of Chicago; Mary L. King, associate professor of management at Rhode Island College and author of "The Great American Banking Snafu"; Martin Mayer, author of "The Bankers" and a contributor to the *American Banker*; and George C. White, consultant and president of White Papers Inc., Montclair, N.J.

Another session has been scheduled to focus on the U.S. Treasury's vendor payment program, wherein government agencies will begin in July to convert check payments to automated clearing house items. The speaker is Loretta Walker, senior program analyst at Treasury.

INSURANCE TECHNOLOGISTS MEET: Office automation, telecommunications, electronic publishing, and productivity are among the topics to be covered at the Life Office Management Association's evolving technologies conference, May 18-20 in Orlando, Fla.

For information, contact Scott K. Allen at the association's headquarters in Atlanta, telephone 404-951-1770.

S&L SWITCHES ALLEGIANCE: Landmark Savings Association, Pittsburgh, dropped out of Mellon Bank's CashStream automated teller machine network and joined the Mac system instead, effective Feb. 2.

Mac, operated by Philadelphia National Bank, consists of 360 machines in western Pennsylvania out of 2,018 in Pennsylvania, Delaware, New Jersey, and New York. Mac is also a part of Plus System Inc., the nationwide network of 13,000 ATMs.

Landmark Savings, with $1.5 billion in assets, has 25 ATMs of its own.

SUCCESS WITH QUADSTAR: First Eastern Bank NA, Wilkes-Barre, Pa., the beta test bank for Quadstar Corp.'s Q-UP/32 fault-tolerant automated teller machine operating system, reported reaching a volume of 4,300 transactions per machine per month for its system that went live last August. Annual transaction volume for its network of 24 Diebold machines was up 17% in 1986.

Quadstar, a Dallas-based subsidiary of Citicorp, designed the system to run on a Stratus/32 computer, whose continuous processing architecture reduces the likelihood of downtime. For First Eastern, the system connects to the Mac regional ATM network.

"We analyzed several vendors and chose Quadstar because we were familiar with their proven ATM software," said William Heverly, assistant vice president at the $1.7 billion-asset bank. "Quadstar proceeded to install the system within our time frame and completed the Mac link in only a week. Overall it was one of the smoothest installations that we've ever had."

NATWEST BUYS SWEDISH: National Westminster Bank USA, New York, is installing 100 Teller Assist Cash Dispensers from Inter Bank Systems Inc., Yonkers, N.Y., the U.S. subsidiary of Inter Innovation of Sweden.

The automatic cash handling units, which will be connected during 1987 to the bank's IBM 4700 teller terminal system, come on top of 22 units tested in NatWest branches since 1984. The latest sale was valued at $1.5 million.

Other Inter Innovation users in North America include Bank of America, Bank of Nova Scotia, Chemical Bank, Citibank, First Fidelity Bank of New Jersey, Marine Midland Bank, PSFS, Royal Bank of Canada, and Government Employees Credit Union of Texas.

CARD MAKER RELOCATES: Perfect Plastic Printing Corp., a plastic card producer in St. Charles, Ill., has outgrown its quarters for the second time in six years.

Its latest facility west of O'Hare Airport outside Chicago includes a windowless factory, a sophisticated electronic surveillance system, and other state-of-the-art systems to maximize productivity and quality. The building, on an eight-acre site, is twice the size of the previous location and has room to double again before another move is necessary, the company said.

COLONIAL PENN PICKS TANDEM: Colonial Penn Group Inc., Philadelphia, one of the largest direct response insurance companies, will install Tandem NonStop systems in a network connecting more than 1,500 personal computers and terminals to its Honeywell and IBM host systems. The network is used for on-line access to multihost systems and for such applications

Deal Offered By Proxmire On Nonbanks

Compromise Would Allow Existing Units to Remain

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — In an effort to salvage as much of his omnibus banking bill as possible, Senate Banking Committee Chairman William Proxmire offered committee Democrats a compromise on Tuesday that would legitimize existing nonbank banks and defer new underwriting powers for banks.

Mr. Proxmire, a Wisconsin Democrat, would drop from his bill a title giving banks new securities underwriting authority and would close for one year a loophole in the Glass-Steagall Act that appears to permit the Federal Reserve to approve limited underwriting powers.

Although the new grandfather date for nonbank banks and the lack of a securities power title in the bill would appear to violate the American Bankers Association's conditions for supporting the measure, an ABA source who asked not to be named said the revisions appear to contain "positives as well as negatives."

On the positive side, the ABA source said, the new language appears to open the door for the Fed to approve broad new powers after the one-year moratorium expires. Real estate and insurance powers are among the types of new activities that the central bank might be able to approve, the source said. Securities powers, however, would not be expanded beyond what is now in the Glass-Steagall Act, the ABA source said.

The ABA, the source said, has not had time to decide if it will continue to support the bill.

One financial industry source said

Japan's US Presence Grows

By L. MICHAEL CACACE

NEW YORK — Japanese banks substantially increased their presence in this country last year, according to an *American Banker* survey.

They had a net gain of 12 full banking offices, compared with 14 by all other foreign banks.

At midyear 1986, Japanese banks had 95 full banking offices, a 14% increase from 83 offices a year earlier.

Overall, foreign banks had 642 such offices in the U.S. at the end of last June, up 4.2% from 616 the year before. (See statistical tables beginning on page 31.)

Full banking offices include agencies, branches, commercial bank subsidiaries, Edge Act banks, New York investment companies, and finance companies.

In addition, foreign banks had 336 representative offices at midyear 1986, up 4.3% from 322 offices in

INTERNATIONAL BANKING ANNUAL: Global banking, the dominant economic theme of the 1980s, has seen explosive growth through technology, deregulation, and securitization. Overview on **Page 17.**

Cuomo Offers Wider NY Bank Powers

By JED HOROWITZ

NEW YORK — Gov. Mario Cuomo is resubmitting legislation that would gradually repeal New York State's version of the Glass-Steagall Act and extend broader insurance powers to banks.

New York's governor this week sent five bills to the heads of the state Assembly and Senate banking committees. The bills seek to carry out recommendations made by the DeWind Commission, a financial services restructuring panel appointed in the governor's first term.

Several versions of the bills have been forwarded to the legislature for the past two or three years, but most have not been enacted.

The New York State Banking Department, which in December issued an interpretive letter seeking to enhance banks' securities powers, is pressing hard this year for the Glass-Steagall repeal bill. The department's influence means the bill almost certainly will be put on the legislative agenda, said Juliana Casilliano, counsel to the Assembly Banking Committee.

The bill would modify New York's "mini Glass-Steagall Act," officially Section 103(9) of the state banking law, but it is not as strong as some regulators would like. It merely says that the statute restricting bank affiliations with securities firms will automatically

FOOTNOTES: Included in this listing are the U.S. offices of foreign banks for which data have been received, either directly by American Banker, or indirectly from the various data sources listed below. If data were not available, the office is not listed. (See the table entitled "Offices Not Included" on page 40 for a list of the offices for which June 30,1986, data were not available and a list of offices closed.) American Banker will rank the respective offices and the respective foreign banks in the U.S. based on their total U.S. operations in the edition of April 9.

In this listing, foreign countries are listed alphabetically. Within a country, the banks are listed alphabetically. Average assets and deposits for June are used for branches & agencies, while June 30 data are used for commercial banks, Edge banks and investment companies. Yearend 1985 (and 1984) data are used for finance companies.

(a)—Assets shown are for 12/31/85, or nearest fiscal yearend, for banks providing data for World Bank listings published July, 1986. For other banks, latest available data was used. **(b)**—Ratio represents the June assets of the bank's U.S. office(s) to the bank's total worldwide assets the previous yearend. **(c)**—Office types are: B=Branch; C=Commercial Bank; E=Edge bank; EB=Branch of Edge bank; F=Finance company; and I=Investment company. Abbreviations for locations are:ATL=Atlanta; BOS=Boston; CHI-=Chicago; DAL=Dallas; DC=Washington, D.C.; LA=Los Angeles; MIA=Miami; NY=New York City; PHI-=Philadelhia; PIT=Pittsburgh; SF=San Francisco; HOU=Houston and SEA=Seattle. **(d)**—Includes the banking subsidiaries of First Maryland Bancorp., Baltimore. Allied Irish Banks owns virtually 50% of First Maryland Bancorp. **(e)**— Sold Long Island Trust Co. NA, Garden City, N.Y., to the Bank of New York Co., Inc., in Sept. 1986.**(f)**— Industrial Bank of Japan acquired J. Henry Schroder Bank & Trust Co., New York, from Schroders Plc, London in Dec. 1985. Title of bank changed to IBJ Schroder Bank & Trust Co. in Jan. 1987.**(g)**—Does not include data for New Mexico Banquest Corp. In Feb. 1984, Banco de Vizcaya acquired 48% of New Mexico Banquest Investors Corp., Santa Fe., which is second tier holding company for New Mexico Banquest Corp.The latter company is a multibank holding company for: Banquest First National Bank, Santa Fe; Banquest First State Bank, Taos; and Banquest National Bank, Albuquerque. **(h)**—Bank is also known as Swiss Credit Bank. New York branch is listed as Swiss Credit Bank.**(i)**—The bank—UBAF Arab American Bank, New York— is part of the Al UBAF Banking Group, Neuilly, France. The bank has 20 shareholders. These 20 shareholders are: (1) Alahli Bank of Kuwait; (2) Arab African international Bank, Cairo; (3) Arab Bank Ltd., Aman, Jordan; (4) Bankers Trust New York Corp.; (5) Banque du Maroc, Rabat, Morocco; (6) Central Bank of Egypt, Cairo; (7) Commercial Bank of Syria, Damascus; (8) First Chicago Corp.; (9) Government of the Sultanate of Oman, Directorate General of Finance, Muscat; (10) Libyan Arab Foreign Bank, Tripoli; (11) National Bank of Abu Dhabi, United Arab Emirates; (12) Riyad Bank, Jeddah, Saudi Arabia; (13) Security Pacific Corp., Los Angeles; (14) Sudan Commercial Bank, Khartoum; (15) Texas Commerce Bancshares Inc., Houston; (16) U.B.A.E. Arab German Bank SA, Luxembourg/Frankfurt; (17) U.B.A.E. Arab Italian Bank SpA, Rome; (18) UBAF Bank Ltd., London; (19) UBAN International Ltd., Hong Kong; and (20) UBIC Nederland B.V., The Hague. **(j)**—Owned by three banks of the Audi Group; (1)-Banque Audi, Beirut, Lebanon; (2)-Bank Audi (Switzerland), Zurich; and (3)-Banque Audi (France), Paris. **(k)**—The bank is owned by the following five Philippine banks: (1)-Philippine National Bank; (2)-Land Bank of the Philippines; (3)-Development Bank of the Philippines; (4)-Government Services Insurance System; and (5)-Social Security System. **(l)**—Owned by six European banks: (1)-Amsterdam-Rotterdam Bank, Netherlands; (2)-Creditanstalt-Bankverein, Vienna, Austria; (3)-Deutsche Bank, Frankfurt, Germany; (4)-Midland Bank Plc., London; (5)-Societe Generale de Banque, Brussels; and (6)-Societe Generale, Paris.. **(*)**—Office is in the foreign bank's "Home State". **N.A.**—Not Available

Source of branch, agency and Edge bank data is the Federal Reserve Board's reports of assets and liabilities for these respective banking offices as of June 30, 1986. Commercial bank data for June 30, 1986, were provided by ADP Data Services Division, New York, from their data base derived from Federal Reserve Board call report computer tapes. Finance company and investment company data were obtained by American Banker directly from the companies.

Japanese Banks Increase Their Presence in US, Survey Shows

➜ Continued from Page 1

1985.

A representative office handles such functions as the solicitation of new business, loan production, liaison between the bank's head office and correspondent banks in the U.S., and customer relations.

Thus, the total number of foreign banking offices — full offices plus representative offices — totaled 978 at midyear 1986, up 4.3% from the 938 offices the year before. The total number of foreign bank offices was up 3.7% in 1985.

Last year foreign banks opened 40 full banking offices and closed 14, for a net gain of 26. Japanese banks accounted for 46% of that increase. They established 13 full banking offices, while closing only one.

No other country had a net gain of more than three offices last year. Both France and Indonesia established three new offices.

New York had the largest gain in offices with 11. Houston, helped by a new state law permitting agency offices, was next with five new offices. Three offices were established in Chicago, and two each in Boston and Los Angeles.

These are some of the findings of *American Banker's* annual survey of foreign banks in the United States. This year, the survey will be published in two parts. Part 1, published today, identifies the foreign banks operating in the U.S. The banks are listed alphabetically by country and their offices are identified by type. The combined amount of business loans, assets, and deposits in these offices, as of June 30, 1986, are shown and compared with a year earlier.

Also appearing in today's edition is a listing of the 336 representative offices of foreign banks. This lists the offices geographically within the United States.

The second part of the survey will be published on April 9. It will rank foreign banks by the combined size of business loans outstanding at all their U.S. offices on June 30, 1986. In addition, the top 25 banking offices by type will be identified, and the assets, deposits, and business loans of each individual banking office will be reported.

As a group, the 27 Japanese banks operating in the U.S. were the dominant foreign banking group. These banks had the most offices with 89; the most business loans, $46 billion, up 16% from the year before; the most deposits, $110 billion, up 8% from the year before; and the most assets, $201.8 billion, up 22.5% from the year before. Also, these Japanese banks have almost a 40% share of the foreign banks' U.S. business lending market.

Japan's fifth largest bank, the $99 billion-deposit Sanwa Bank Ltd., Osaka, was the most active Japanese bank in the United States last year. In September it acquired the $2.4 billion-deposit Lloyds Bank California, Los Angeles, from Lloyds Bank PLC, London, and then merged that bank into its commercial bank subsidiary, Golden State Sanwa Bank, San Francisco. Golden State Sanwa then changed its title to Sanwa Bank of California.

The Sanwa acquisition of Lloyds Bank California is not reflected in the Japanese and British totals for June 30, 1986.

In addition to this transaction, Sanwa opened two new banking offices. Earlier in 1986 Sanwa established an agency office in Dallas and a branch office in Boston.

In contrast to the gains posted by the top-ranked Japanese banks, banks from the United Kingdom — the second largest foreign banking group in the U.S. — posted sizable declines. At midyear 1986, the 13 British banks in the U.S. had 48 banking offices with combined business loans of $16 billion, down 5% from the year before. These offices had $28.6 billion in deposits, down 36% from a year earlier, and $44.3 billion in assets, down 31% from the year before.

The declines are attributable to the sale by Midland Bank PLC, London, of Crocker National Corp., San Francisco, to Wells Fargo & Co., San Francisco, in February 1986. Crocker National Corp. was the parent holding company for the $15 billion-deposit Crocker National Bank.

Also, another British bank, Schroder PLC, London, sold its commercial bank subsidiary, the $1.4 billion-deposit Schroder Bank & Trust Co., New York, to the Industrial Bank of Japan Ltd., Tokyo, in December 1985. The bank is now known as IBJ Schroder Bank & Trust Co.

- The largest foreign bank in the U.S. in terms of the number of full banking offices and business loans outstanding at these offices is the $69 billion-asset Hongkong & Shanghai Banking Corp., Hong Kong. The bank has 18 full banking offices in the U.S., including Marine Midland Bank NA, Buffalo, the nation's 13th largest bank in deposits and 15th largest in assets. The business loans at these 18 offices total $7.0 billion, while their combined assets total $23.5 billion and their combined deposits total $17.3 billion. The top 25 foreign banks in the United States will be ranked in the edition of April 9.
- More than 4 out of every 10 foreign banks in the United States call New York City their home. Foreign banks have 287 full banking offices in New York, or 45% of the total.
- Los Angeles, with 92 full banking offices, or 14% of the total, is the next largest home for foreign banks in the U.S., followed by Chicago with 54 offices, San Francisco, 50 offices, and Miami, 46. Thus, 82% of the full banking operations of foreign banks in the U.S. are located in just five cities.
- Texas passed a law in August 1985 that permitted foreign banks to establish agency offices. One office per bank is permitted in a county whose population exceeds 1.5 million. Four Japanese banks, two French banks, two Swiss banks, and two British banks took advantage of the Texas law to establish agency offices last year. ■

One-Timers Help Iowa's Brenton Show a Profit

Special to the American Banker

CHICAGO — Several sources of extraordinary earnings and a decline in provisions for loan losses produced a $3.2 million profit last year for Brenton Banks Inc., Iowa's fourth largest bank holding company.

Brenton's profits included $5.1 million from a change in the company's defined benefit pension plan and $2.1 million on the sale of investment securities. In all, Brenton, with assets of $956 million, reported $16.4 million in other income for 1986, a 77% increase from $9.3 million in the previous year.

Brenton's net income also was helped by $261,226 related to a reduction in income taxes from the use of an operating loss carryforward.

The company, which operates 16 banks and 6 nonbank subsidiaries, had a 4.9% decline in net interest income to $31.4 million in 1986 from $33 million the previous year. ■

Credit Card Ads . . .

➜ Continued from Back Page

stein says is "one of the highest rates in the country." Notice of the rate — in type much smaller than the rest of the ad — is buried deep inside the eight-page direct mail piece.

Mandatory Cash Advance

Currently, the average interest rate U.S. banks charge on credit cards is around 18%, he notes.

Also offensive to BankCard Holders is a paragraph, again in tiny print and located in "the back panel of the glossy brochure," that states "you must accept the initial cash advance in order to open your account."

True, approved applicants can return the check as payment for their new balance, but BankCard Holders points out that interest charges on the new balance begin calculating from the moment the check is sent out. It is interest many a surprised consumer is not going to like paying, the group adds.

"What we're objecting to is the forced acceptance of the cash advance," Mr. Holstein stresses. On the front page of the cover letter, First Deposit promises "you get a $3,000 preapproved credit line," leading people to assume they have somehow been preapproved for the card, when in fact they have not.

"Beyond that," he adds, "we also object to the most dangerous element of the advertisement from the consumer standpoint," a prominently displayed offer to slash monthly payments by up to 50% or more.

With this type of deal, Mr. Holstein notes, instead of paying "far less," the consumer in fact will pay far more.

"The way in which they slash monthly payments was not by slashing interest rates but by charging smaller percentages per month on minimum balances due," he says. "Thus, the length of consumers' debt term is stretched out and the consumer pays much more total interest than a more conventional card with a lower rate and shorter payback period."

"Our approach is that there's nothing hidden about it," says Andrew Kahr, president of First Deposit Corp., the San Francisco parent of First Deposit National Bank in New Hampshire. "If someone doesn't want the deal then we'll close the account. If we had ad material that was hard to understand we'd have so many people dissatisfied that it wouldn't be a profitable proposition for us."

Mr. Kahr says First Deposit has not changed the format or wording of the mail solicitations criticized by BankCard Holders, but he notes that the material is always under review.

"We're consistently endeavoring to make our material clearer or more effective. We test our stuff carefully," he says.

"What we are considering," he adds, "is how to improve pricing. The industry is moving toward lower rates and higher fees."

Mr. Kahr says the two-year-old First Select program is growing. He declines to elaborate, however, and he did not say how many new cardholders the bank had signed up as a result of the direct mail campaign. ■

ABA's

National Compliance School NCS

Intensive week-long resident sessions designed for bank compliance officers and other bank personnel with full or part-time compliance responsibilities.

March 8–14, 1987
University of Oklahoma
Norman, Oklahoma

	Tuition Fee	ABA Member Discounted Fee

Banks Looking for New Ways To Cope with Third World Debt

By JOHN WHITELAW

NEW YORK — Brazil's suspension of payments on its medium- and long-term foreign bank debt, and growing expressions of solidarity from other Latin American governments, have given new urgency to proposals to speed up bank response to the crisis.

The proposals would essentially give creditor banks a range of options for helping meet the financial needs of the heavily indebted countries, instead of simply contributing or not contributing to new loan packages.

Two proposals have been discussed in the bank steering committees dealing with Chile and Mexico, and according to Washington consultant Norman Bailey, they have been the subject of study by federal bank regulatory agencies.

"The idea is to be able to offer the bank a smorgasbord of options," said Mr. Bailey. Besides lending new money, the options would include interest capitalization, debt-to-equity swaps, interest rate concessions, and securitization of existing debt.

But it isn't likely that the banks would take the initiative. "Unfortunately, they will wait for a move by the Treasury Department or Federal Reserve Chairman Paul A. Volcker," said Mr. Bailey.

Congressional staff sources familiar with the issue agreed that the ball is in the Reagan administration's court. A proposal involving securitization of Third World debt will be a part of this year's trade bill, but the congressional

Dodd and Schumer Push Bills On Credit Card Rate Disclosure

By JAY ROSENSTEIN
Washington Bureau

WASHINGTON — Sen. Christopher J. Dodd, D-Conn., and Rep. Charles Schumer, D-N.Y., on Thursday unveiled a joint effort intended to help consumers shop for credit cards and to further lower card interest rates.

Under current law, various disclosures are required only when a consumer receives a credit card. The two lawmakers, asserting that consumers need more information on a more timely basis, introduced bills that would mandate disclosures in applications and solicitations.

They suggested disclosing the annual fee "up front," the interest rate on unpaid balances, the method of calculating the balance, and information about the grace period.

The Dodd-Schumer bills are expected to be challenged by the lending community as too costly and burdensome. While disclosure legislation is preferable to trying to regulate interest rates, an American Bankers Association spokesperson said on Thursday, "our concern now is that proposed legislation avoids making disclosure so complicated that it becomes meaningless to consumers or results in raising the costs of providing consumer credit."

Lenders appear more inclined to support a bill along the lines of one introduced earlier this month by Rep. Doug Barnard, D-Ga. His bill would apply only to direct-mail solicitations for credit cards.

With Democrats in control of both houses of Congress for the first time in six years, chances for a credit card disclosure bill, along with other consumer protection measures, have improved.

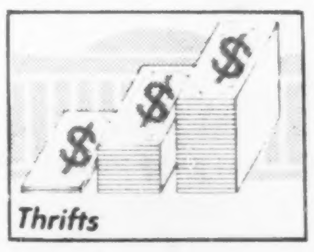
Congress: Page 7 ➻

Bank Board Unveils Eased Capital Rule

Says Formal Statement Reflects Current Practice

By JIM McTAGUE

WASHINGTON — The Federal Home Loan Bank Board says its examiners have been giving kid-glove treatment to financially troubled thrifts in depressed areas for over a year now, provided the institutions are well managed and have reasonable prospects of turning around.



To prove this and satisfy congressmen from Texas, the Bank Board on Thursday issued a formal policy statement on forbearance for savings institutions in distressed areas of the United States.

The Bank Board hopes the action will speed congressional approval of a plan to recapitalize the Federal Savings and Loan Insurance Corp., which, according to a General Accounting Office report this week, may have been insolvent at the end of 1986. The GAO will testify before the House Banking Committee on the matter next Wednesday.

But one Texas industry official said Thursday that the Bank Board policy didn't sound charitable enough. "Let us have some rinky-dink accounting rules until we can get out of this economic slump," said Tom King, executive vice president of the Texas Savings and Loan League.

The U.S. League of Savings Institutions said it welcomed the forbearance statement and had been recommending such changes in Bank Board policy for some time.

In testimony before a House Banking subcommittee, Federal Reserve Chairman Paul A. Volcker minimized concerns that the FSLIC might use a cash infusion to begin closing down well-

Bank Board: Page 8 ➻

A VIEW FROM OUTSIDE

MARTIN MAYER

The Nonissue of Nonbank Banks

INSURANCE brokering, the Federal Reserve Board has ruled, is not an activity directly incident to banking, and thus a bank holding company may not own an insurance agency. In some states a bank can, and in some states it can't.

(Among the little peculiarities of the dual banking system is that the state-chartered bank inside a bank holding company can perform activities prohibited to the holding company. Thus Toledo Trust, for example, can operate a travel agency as part of its subsidiary bank, but could not legally own a travel agency.)

Federally chartered banks can't incorporate insurance agencies anywhere. But in fact there are branches of Citibank in New York where, if you turn right at the door instead of walking toward the cages, you will find yourself at the desk of an insurance broker. Citicorp doesn't own that brokerage, of course — heaven forfend. It merely leases some space on the banking floor to an insurance agent.

I am not privy to the terms of the lease, but there's nothing in law or custom that would prohibit the agent from paying a share of his fees on the premiums or his profit on the operation as his rent for the space.

By analogy, let us pretend that I am the nation's largest brokerage house, with clients numbered in the millions.

I want to tie my customers to me more closely by offering them banking services that will not be easily duplicated by other brokerage houses that might hire some of my employees away from me in the historically accurate expectation that customers move with their customers' men.

SO I develop something I call a Cash Management Account, which includes the weekly sweep of customer cash balances into a money market fund, and access to that fund — and to the excess margin behind my customers' stock holdings — through checks and a credit card.

Now, I can't take deposits — heaven forfend — and I can't join a bankers' clearing house or become an end point for Federal Reserve transfers or get my credit card accepted in either of the national systems. For all that, I need a bank.

Fortunately, there's a bank in Ohio, a large processor of Visa cards with excess capacity in its computers, looking to

EXECUTIVE CHANGES

Freedom Names Acting President

NEW YORK — **Louis Prezeau** has been appointed acting president of Freedom National Bank, New York, the nation's fourth largest black-owned financial institution. He succeeds former president **Shamia "Tab" Buford,** who resigned from the bank. Mr. Prezeau was also named executive vice president/chief operating officer, a promotion from his former position as the bank's executive vice president and cashier. As acting president and chief operating officer, Mr. Prezeau will report to Freedom's board of directors. A native of Haiti, Mr. Prezeau is a graduate of the Bernard Baruch School of Business and is a certified public accountant.

Louis E. Prezeau

DOUGHERTY, DAWKINS, STRAND & YOST INC., Minneapolis, said former South Dakota Gov. **William A. Janklow** has joined the investment banking firm as a managing director. Mr. Janklow will focus especially on the formation of capital for economic development programs and state agencies and authorities whose access to capital has become limited by recent changes in federal tax law. The former governor will maintain his South Dakota residency and commute to Minneapolis.

FIRST INTERSTATE BANCORP, Los Angeles, said **Richard Puz,** formerly an executive vice president with Seafirst Bank in Seattle and Bank of America, has joined the bank holding company as an executive vice president. He will have primary responsibility for the management of First Interstate Mortgage Special Assets.

FIRST TENNESSEE, Chattanooga, hired **P. Robert Philp** as regional president of First Tennessee-Chattanooga. He succeeds **C. Duffy Franck Jr.,** who is leaving to consider other opportunities. Mr. Philp comes to First Tennessee from Boatmen's Bancshares Inc. of St. Louis, where he managed the firm's Illinois banks.

INTERNATIONAL BUSINESS MACHINES CORP., Armonk, N.Y., elected **Arthur J. Hedge Jr.** and **Ned C. Lautenbach** vice presidents and **John H. Manningham** secretary. Mr. Manningham, who is director of personnel management services, will assume the secretary's responsibilities on July 1, upon the retirement of **Thomas C. Irwin.** Mr. Hedge is president of IBM's real estate and construction division. Mr. Lautenbach is president of IBM's national distribution division.

NIXON, HARGRAVE, DEVANS & DOYLE, New York, said **Alexander D. Hargrave** will rejoin the law firm as senior counsel on July 1. Mr. Hargrave retired as chairman of the board of Chase Lincoln First Bank Bank NA, Rochester, N.Y., last July 1. A partner at Nixon Hargrave before becoming executive vice president of Lincoln Rochester Trust Co. in 1963, he had a major role in the merger of Lincoln Rochester and four other upstate New York banks into the Chase Lincoln holding company. He will advise the law firm and its clients on banking, corporate, and other matters.

TCF BANKING AND SAVINGS FA, Minneapolis, said **Philip M. Broom,** vice president of special support lending, has been promoted to senior vice president.

— Franklin Smith

Chase to Finance Neoax Purchase of Gear Maker

Bank of Oklahoma Takes Control of 11 Drilling Rigs of Near-Bankrupt Company

By PHILIP T. SUDO

NEW YORK — **Chase Manhattan Bank** will finance the $70.5 million purchase of Fairfield Manufacturing Co. by Neoax Inc., Neoax officials said Thursday.

Commercial Lending

Neoax, a diversified manufacturing company based in Lawrenceville, N.J., signed a definitive agreement to purchase Fairfield Manufacturing, a wholly owned subsidiary of Rexnord Inc., on Monday. The cash purchase is expected to be completed in March.

Fairfield Manufacturing, based in Lafayette, Ind., is the largest U.S. manufacturer of custom gears for industrial use, with sales of $84 million in the year ended Oct. 31, 1986.

Louis A. Guzzetti Jr., president of Neoax, said Fairfield Manufacturing has been engaged in a major restructuring program to improve productivity and quality, but "we believe its quality products and predominant position in the industry make it a company with outstanding profit potential."

■

Rabobank Nederland BA, New York, and **Norwest Bank NA,** Des Moines, will provide American Nursery Products Inc. with a $20 million revolving credit facility.

The Tahlequah, Okla.-based firm said it will use the secured line for working capital, debt restructuring, and other general corporate purposes.

The firm's primary lender had been **Citicorp Industrial Credit**, but Freddie E. Been, chief financial officer, said, "We grew to the point where we could shop around from a more competitive rate."

American Nursery Products Inc. is principally engaged in the business of growing ornamental plants and trees for wholesale distribution. It owns and leases nursery farm properties and warehouse facilities in Oklahoma, Alabama, Iowa, Oregon, Washington, Florida, and the country of Guatemala.

The new line carries lower interest rates when compared with American Nursery's current facility, Mr. Been said, and will save approximately $350,000 in interest costs annually.

Most of the credit, $15 million, comes due Nov. 30, 1987; the remainder will be due Nov. 30, 1989. Rabobank, a Dutch cooperative banking institution, will extend 75% of the line at 1½ points above the Fed funds rate in the interbank market for credit due in '87, and 1¾ points higher on the credit due in '89.

Norwest, a subsidiary of Minneapolis-based Norwest Corp., will charge a quarter-point above its base interest rate on the first loan, and a half point above its base rate for the second.

American Nursery had been paying 9½% on its asset-based loan with Citicorp Industrial Credit, plus a management fee that brought the effective rate to 10½% per annum.

■

Bank of Oklahoma, Oklahoma City, has assumed control of 11 drilling rigs from Ratliff Drilling Co. as security under a 1978 trust indenture.

Ratliff's holding company, Velma, Okla.-based Ratliff Drilling & Exploration Co., is currently unable to pay debts of more than $18 million. John B. Smith, a spokesman for the firm, said it may be necessary for Ratliff to file for bankruptcy to ensure an orderly liquidation of the company's assets.

Bank of Oklahoma said it intends to dispose of the rigs and distribute the proceeds to the noteholders as partial satisfaction of Ratliff's debt, although proceeds from the rig sale are expected to be substantially less than the $5.2 million owed to the noteholders.

Ratliff has surrendered its two remaining rigs and other assets to **Liberty National Bank & Trust Co.**, also of Oklahoma City, in exchange for a credit of $800,000, to be applied against Ratliff's larger debt to Liberty.

After disposition of the 13 drilling rigs, the remaining assets of Ratliff consist of various spare drilling-rig components of nominal value owned by Ratliff Drilling Co. and a labor contract between Ratliff Drilling Inc., another wholly owned subsidiary, and a foreign company under which Ratliff Drilling Inc. furnishes personnel to operate a drilling rig.

In the opinion of Ratliff's management, the value of the remaining assets is substantially less than would be necessary to satisfy the debts of the company.

□

First National Bank of St. Paul, the lead bank for First Bank Systems Inc., is in the process of taking possession of all the assets of MRFY Corp. after the trucking firm said it no longer had the funds necessary to continue in business.

MRFY, the St. Paul, Minn.-based parent of Murphy Motor Freight Lines Inc. and Green Streak Services Inc., shut down its operations Wednesday and will file petitions for bankruptcy under Chapter 7 of the bankruptcy code. ■

Strategic Dates

Oct. 1, 1988

THRIFT PARITY POWERS: By this date thrifts in the state of Connecticut should have increased commercial lending power, decreased limitations on personal loans, more power to invest in securities of up to 8% of assets, and permission to engage in other expanded activities. The changes are the result of a thrift parity bill giving thrifts several powers that commercial banks in the state already have.

THRIFT REVIEW: The party may be over for some thrifts, but many on the West Coast are celebrating their diversification plans for maintaining profitability. Overview begins on Page 9.

BANK BOARD MEMBERS and staff never had any legal basis for accepting millions of dollars in travel and lodging expenses from the agency's 12 district banks, according to the General Accounting Office.......... 2

SEN. JAKE GARN WARNED that with government audits indicating that the Federal Savings and Loan Insurance Corp. is technically bankrupt, Congress must act on emergency legislation or face widespread depositor runs.................................. 2

BANKERS TRUST CO. will draft a sample standardized participation agreement for use in the sale of short-term loans as part of an effort to create a secondary market for commercial loan sales.................... 2

THE MORTGAGE CORP., Salomon Brothers' United Kingdom mortgage subsidiary, launched a 200 million pound, or $300 million, offering of mortgage-backed floating-rate notes on Thursday — the company's first mortgage issue since opening less than a year ago.......... 2

ROBERT MANKIN, who helped First Interstate Bancorp launch a mortgage securities company, is joining Nomura Securities International to form a mortgage unit...................... 2

CITICORP AND NOVA SCOTIA BANK provided part of the $550 million financing to Banner Industries Inc., an aviation products provider, for its 97% acquisition of Rexnord Inc.... 3

PROPOSED CHANGES in West Virginia's banking law are aimed at luring Chase Manhattan Bank to the state, but they also are likely to increase consumer interest rates.... 27

ALTHOUGH CALIFORNIA regulators have granted direct real estate investment powers to 100 state-chartered banks, only 63 have exercised the authority so far........................ 30

REAL ESTATE LOAN PROBLEMS were cited as Magnet Bank reported a $6.8 million loss last year, the first in the Charleston, W.Va., bank's 53-year history.................................. 31

THEIR MUG SHOTS don't hang on any post office walls, but in some circles three bank holding company chairmen are the most wanted men in New Jersey................................ 32

Total Borrowings	195.3	157.6	+23.9
REGULATORY NET WORTH	53.2	46.6	+14.2

NEW YORK — Asset growth was significantly higher than deposit growth at the nation's 100 largest thrift institutions again last year, according to an *American Banker* survey.

Assets grew 95% faster than deposits, the survey found. In 1985, assets grew 75% faster.

There are several major reasons for the widening difference in asset and liability growth.

First, the decline in interest rates made savers reluctant to place their funds in longer-term certificates of deposits. To obtain long-term funds, the top institutions borrowed. Also, in 1986, as in 1985, when long-term interest rates fell, it actually became cheaper for many institutions to borrow for their long-term funding needs rather than to take over-the-counter deposits.

Second, net worth at the top 100 thrifts grew 17.9% last year and helped to fuel the growth in assets. The growth in net worth was attributable, in part, to the recent conversions from mutual to stock ownership. Twelve of the top 100 thrifts converted to stock ownership last year.

Third, as institutions converted from mutual to stock form of ownership, their deposit growth was dampened, since some depositors converted their deposits into equity. For example, the deposits of the 12 thrifts that convert-

Products and Fakery

THE challenge in modern advertising, the late Rosser Reeves said 30 years ago, is that a client comes into your office with two newly minted half-dollars, throws them onto your desk, and says, "Mine is the one on the left. You prove it's better."

This wasn't, Mr. Reeves added, an entirely new problem: Claude Hopkins, every serious ad man's ancestral totem, had faced and conquered it in the early 1900s when he undertook the representation of Schlitz beer. Mr. Hopkins had gone to the brewery and been especially intrigued with the process by which the bottles were prepared for filling, scoured, and sterilized by a steam jet. "Washed with live steam!" Mr. Hopkins wrote. The Schlitz people objected that all beer bottles were washed the same way in all breweries, and Mr. Hopkins explained that the public didn't know that, so Schlitz could seize the claim, and indeed, seize it exclusively, because rivals who then advertised how well they washed their bottles would wind up in effect advertising Schlitz rather than their own brands. This worked. When it engaged Lord & Thomas, Hopkins' agency, Schlitz was just another Milwaukee brewery, a good customer of the First Wisconsin National Bank but nothing special. Within 10 years, it became the nation's leading brand of beer, and the Uihlein family, which owned the brewery, pretty much got control of the bank, too.

Regan's Exit Boosts Clout Of Jim Baker

By ROBERT TRIGAUX
Washington Bureau

News Analysis

WASHINGTON — Now that Donald Regan is gone, will the Reagan administration's drive for financial deregulation wither on the vine?

Which of the Bakers — Howard or James — benefits most from Regan's resignation from the Oval Office last week?

Donald Regan wore many hats in Washington. From imperious Wall Street head of Merrill Lynch & Co. to hard-charging Treasury secretary, and then as one of the most powerful chiefs of staff in White House history, the autocratic Mr. Regan never forgot his fascination with the financial industry and his singular goal, its deregulation.

Now that this powerful personality has stepped out of public life, White House and financial industry watchers see some clear implications for new directions in public policy, some of which may affect banking.

Most significant may be the perceived decline in the Reagan administration's drive to back a comprehensive restructuring of the financial industry and to encourage more free market activities. At the very least, the departure of Mr. Regan — who helped engineer major tax law reform last year — removes one of the most vocal supporters of deregulation from the administration.

In addition, White House general counsel and deregulation advocate Peter Wallison submitted his resignation on Wednesday and will leave the administration on March 20. Mr. Wallison, who joined Mr. Regan at the White House after serving as his general counsel at the Treasury Department, was a major supporter of easing constraints on commercial banking activities.

Regan: Page 28 ➔

Would you feel more secure with a credit card program that offers very little risk?

If you have some good reasons to have a credit card program and also some good reasons not to want the full risk of running one, talk to Franklinton Financial Services.

Franklinton offers the perfect solution, and takes on the responsibility for conducting the program from beginning to end. Or, if you have a program now and want to convert, Franklinton may be interested in purchasing your portfolio. What could be easier? You benefit, and have the advantage of security, too.

It's just another way Franklinton takes a personal interest in your needs. And another reason why Franklinton is one of America's most popular credit card processors.

Call Joette Kuharic at 614/863-8222 for more information. You'll find her very helpful.

Talk to Franklinton... America's personal favorite.

The bulk of the data are from American Banker's questionnaire which asks for total deposits and savings accounts, excluding all escrowed accounts. This preliminary list of the top 100 is based solely on the thrifts that responded to the questionnaire by production deadlines. **Total deposits and savings accounts** include: non-interest earning demand and NOW accounts; accounts earning in excess of regular rate in certificates with denominations of $100,000 or more and in other accounts; and accounts earning at or below regular rate in interest-earning NOW accounts, in passbook accounts, and all other accounts, except escrowed accounts. **Regulatory Net Worth** includes permanent, reserve, or guarantee stock; paid-in surplus; qualifying mutual capital certificates; income capital/net worth certificates; qualifying subordinated debentures; appraised equity capital; reserves; undivided profits; and net undistributed income. **Charter Types:** 1-Mutual Savings Bank; 2-Stock Savings Bank; (3)-Mutual Savings & Loan Association; (4)- Stock Savings & Loan Association. **Insurance Types:** 1-FDIC-Insured; 2-FSLIC-Insured; 3-State Insured. **(a)**— The Dec. 31, 1986, data for Goldome are on a consolidated GAAP (''generally accepted accounting principles'') basis. **(b)**— Prior to 1986, data for Goldome were on an unconsolidated regulatory basis. Since these data are not comparable with the 1986 data, they are not shown here. **(c)**— Part of Empire of America FSB's financial service network. Empire of America FSB had consolidated deposits of $7.35 billion and consolidated assets of $9.10 billion at the yearend. Had the consolidated deposit figure been used, Empire of America FSB would have ranked 12th in deposits. **(d)**— Deposits for 12/31/86 are approximate and subject to a final audit.

Banks Bearish On Real Estate In California

By ROBERT LUKE
West Coast Bureau

LOS ANGELES — California's state-chartered banks aren't rushing pell-mell into the direct real estate investment game.

Although state regulators have granted direct real estate investment powers to 100 banks, only 63 have exercised that authority so far, according to John R. Paulus, deputy superintendent of banks.

The investments total $99.9 million, representing one-tenth of 1% of the assets of California's 286 state-chartered banks, or 1% of the total assets of the 63 banks.

Since 1984, California's state-chartered banks have been empowered to invest up to 10% of their assets in direct real estate investments through subsidiaries. For banks without direct-investment units, such investments are limited to 100% of shareholders equity.

Results of the survey, gleaned from information requested specifically in the banks' yearend call reports, are expected to be detailed in a letter the department plans to send to the Federal Reserve Board next week.

The Fed last November proposed a rule that would curb the direct real estate investment activities of bank holding companies, including those in 22 states that have granted broad real estate powers to state-chartered institutions. The Fed voiced concern that such activities are unsound.

However, for holding companies in 28 other states, the guidelines could be beneficial if adopted, since they would permit banking concerns in those states to enter the real estate game as direct investors for the first time.

The proposed guidelines would limit a bank holding company's total investment in all real estate subsidiaries to 5% of its consolidated primary capital. That would be less than what California regulators currently allow.

Mr. Paulus said the department will tell the Fed it has "sufficient regulatory controls to monitor these activities." He added: "You're always going to have problems. But the amount of problems at this point in time is not major."

In an earlier interview, Mr. Paulus said the problems included self-dealing, such as bank directors' involvement in real estate joint ventures, and problems with the accounting treatment and carrying values of direct investments in real estate.

The comment period on the proposed rule expires March 25. ■

Thrift Assets Grow Faster than Deposits

➸ Continued from Page 1

ed to stock ownership during 1986 fell by 1.1%, while their assets grew by more than 3.2%.

These are some of the findings of the *American Banker*'s annual survey of the top institutions in the thrift industry. For the purpose of this survey, thrift institutions are savings and loan associations and savings banks. A listing of the top 100 institutions, ranked by deposits, appears on page 18. On May 29, the *American Banker* will publish a list of the top 300 institutions in deposits and in assets.

The deposits of the top 100 thrifts totaled $422.1 billion at yearend, up 7.9% from $391.3 billion at yearend 1985. The assets of these thrifts totaled $605.2 billion on Dec. 31, 1986, up 15.4% from the year before.

For the industry as a whole, asset growth was 65% greater than deposit growth. Assets were up 8.9% to $1.17 trillion, and deposits were up 5.4% to $889.9 billion.

The industry data are for all 3,228 FSLIC-insured institutions in the nation at yearend 1986 and come from the Federal Home Loan Bank Board. According to these data, total borrowings jumped 23.9% last year to $195.3 billion and accounted for 39% of the industry's funding of asset growth. And net worth rose by 14.2%, accounting for 7% of the industry's funding of asset growth.

Also, these data show that the fastest-growing assets on the industry's balance sheet were mortgage-backed securities. The holdings of these securities by the entire industry rose 35.8% in 1986 to $151.5 billion.

Mortgage-backed securities include a variety of investment securities representing shares in a pool of mortgage loans. Some are insured or guaranteed by an agency or instrument of the United States and others are conventional mortgage-backed pass-through securities, which are not insured.

The growth in the holdings of mortgage-backed securities represents the industry's attempt to improve the liquidity of its asset portfolio.

The Nation's Top Thrifts

Home Savings of America FA, Irwindale, Calif., remains the nation's top deposit-taking thrift institution, with $21.8 billion in deposits on Dec. 31, 1986, up 11.7% from the year before.

Great Western Bank FSB, Beverly Hills, remains the second largest thrift institution, with deposits of $18.1 billion on Dec. 31, up 3.9% from the year before. Formerly Great Western Savings FS&LA, the thrift changed its title and charter last year, converting from a stock savings and loan association to a stock savings bank.

American Savings and Loan Association, Stockton, Calif., remains in third place, with deposits of $17 billion on Dec. 31, down 2.6% from the year before.

California Federal Savings and Loan Association, Los Angeles, again was fourth, with deposits of $15.5 billion.

And Glendale Federal Savings and Loan Association, Calif., surpassed Meritor Savings Bank, Philadelphia, as the fifth largest thrift, with $12.7 billion in deposits at yearend, up 15.7% from the year before when it ranked sixth.

Meritor Savings Bank, the nation's largest savings bank, fell to sixth place in deposits among all thrifts, with $12.68 billion at yearend 1986, down 2.2% from $12.97 billion a year earlier.

In terms of total assets, American Savings is the largest thrift, with $33.9 billion in assets at yearend, up 24% from the year before. Home Savings is second, with assets of $27.8 billion; Great Western is third, with $27.4 billion; California Federal is fourth, with $20.5 billion; and Meritor is fifth, with $18.4 billion.

Among the top 10 institutions, First Nationwide Bank FSB, San Francisco, posted a 26% gain in deposits to move up one notch in the rankings to seventh position, with $11.08 billion in deposits at yearend, surpassing Goldome FSB, Buffalo. First Nationwide Bank FSB, San Francisco, a subsidiary of Ford Motor Co., acquired four other thrift institutions last year with combined assets of more than $2.2 billion to account for the bulk of the gain.

Goldome, with $11.02 billion in deposits, fell one notch to eighth place. Goldome is the largest mutual savings bank in the nation and third largest savings bank overall behind Meritor and First Nationwide.

In addition to Goldome, only two other institutions ranking among the top 25 had a mutual form of ownership at yearend. They are 14th-ranked Anchor Savings Bank FSB, Northport, N.Y., and 25th-ranked Standard Federal Bank, Troy, Mich. Anchor Savings is currently in the process of converting to the stock form of ownership, and Standard Federal just completed its conversion to a stock savings bank in January.

At midyear, five of the top 25 thrifts were mutually owned. Since midyear, 15th-ranked Dime Savings Bank of New York FSB and 23rd-ranked Empire of America FSB, Buffalo, completed their conversions from mutuals to stock savings banks.

Overall, 76 of the top 100 thrifts, with 82.6% of the deposits, were in stock form on Dec. 31. At midyear, 67 of the top 100 thrifts were in stock form, and they had 74% of the deposits of the top 100 institutions.

During 1986, 12 of the top 100 thrifts converted from mutual to stock ownership in 1986. These 12 institutions are identified in the story appearing on page 31.

Other Survey Findings

- Franklin Savings Association, Ottawa, Kan., had the largest nonmerger-related percentage gain in deposits last year and the largest gain in deposit rank. Franklin Savings moved up 90 places in rank to 88th position, with deposits of $1.96 billion at yearend 1986, up almost 80% from the year before when it ranked 178th in deposits, with $1.09 billion. According to a spokesman for the institution, the gain was attributable to the issuance of broker retail certificates of deposit.
- Eleven of the top 100 thrifts acquired 18 other thrift institutions last year, and these 18 institutions had combined assets of $6.2 billion. A story that appears on page 31 identifies the 11 institutions among the top 100 that were involved in merger activity last year and the institutions acquired.
- Two Citicorp thrift subsidiaries — 34th-ranked Citicorp Savings of Illinois FS&LA, Chicago, and Citicorp Savings FS&LA, San Francisco — had the best ratios of regulatory net worth to total assets at yearend among the top 100 thrifts, 30.66% and 18.22%, respectively.
- The institution reporting the smallest ratio of net worth to assets was 54th-ranked Sunbelt Savings Association, Dallas, with a ratio of 0.37%. Seven of the top 100 thrifts did not provide the *American Banker* with their regulatory net worth data.
- Eight institutions that ranked among the top 100 in deposits on Dec. 31, 1985, dropped out of the top 100 on Dec. 31, 1986. In this group, the institution with the largest decline in deposits was Freedom Savings and Loan Association, Miami. Freedom's deposits fell 18.4% to $1.55 billion on Dec. 31, 1986, from $1.9 billion on Dec. 31, 1985, when it ranked 85th in deposits. Freedom's assets totaled $2.17 billion at yearend 1986, and its regulatory net worth was negative $46 million on Dec. 31. ■

S&L Mergers, Conversions to Stock Ownership Were Big in '86

By L. MICHAEL CACACE

NEW YORK — Eleven of the nation's top 100 thrifts acquired 18 other thrift institutions and 12 of the top 100 converted from the mutual to stock form of ownership in 1986.

The 18 institutions acquired through mergers had combined assets of $6.2 billion and accounted for almost 8% of the asset growth of the top 100 thrifts last year. Following are the 11 acquiring institutions.

- Fourth-ranked California Federal Savings and Loan Association, Los Angeles, acquired $42 million-asset La Jolla Pacific Savings Bank in November.
- Seventh-ranked First Nationwide Bank FSB, San Francisco, acquired four institutions: State Savings and Loan Co., South Euclid, Ohio; Citizens Home Savings and Loan Co., Lorain, Ohio; St. Louis Federal Savings and Loan Association, Clayton, Mo.; and Lincoln Federal Savings Bank in Louisville, Ky. These four institutions had combined assets of more than $2.2 billion.
- 10th-ranked Home Federal Savings and Loan Association, San Diego, acquired $83 million-asset Upland Savings and Loan Association, Upland, Calif.
- 93d-ranked Citizens Federal Savings and Loan Association, Miami, acquired $700 million-asset Equitable Federal Savings Bank of Ohio on July 9, 1986, in a supervisory-assisted transaction.
- 28th-ranked Carteret Savings Bank FA, Morristown, N.J., assumed the assets and liabilities of three institutions with combined assets of $173 million: Admiral-Builders Savings and Loan; Mountain Security Savings Bank of Wytheville; and First Federal Savings and Loan Association of Montgomery County, Blacksburg, Va.
- 27th-ranked Long Island Savings Bank FSB, Syosset, N.Y., acquired $500 million-asset Flushing Federal Savings and Loan Association, Queens, N.Y., in April 1986.
- 29th-ranked Atlantic Financial Federal, Bala-Cynwyd, Pa., acquired two savings and loan associations last year with combined assets of $134 million. In February, it acquired Great Western Savings and Loan Association. In September, it acquired North Coast Savings and Loan Association
- 74th-ranked First Federal Savings and Loan Association, Pittsburgh, acquired two savings and loan associations with combined assets of $132 million — Tower Federal Savings and Loan Association in July and Dollar Savings and Loan Association in November.
- 86th-ranked Hill Financial Savings Association, Red Hill, Pa., acquired the $10 million-asset Fermanagh Building and Loan in October.
- 59th-ranked Old Stone Bank FSB, Providence, R.I., a subsidiary of Old Stone Corp., merged its sister institution — the $483 million-asset Old Stone Bank of Washington FSB — into the bank on Dec. 31, 1986.
- 44th-ranked Bright Banc Savings Association, Dallas, completed its acquisition of Dallas Federal Savings and Loan Association in January 1986. Dallas Federal was the 95th largest thrift in the nation at yearend 1985, with $1.7 billion in deposits.

Mutual-to-Stock Conversions

Twelve of the nation's top 100 thrifts converted from the mutual form of ownership to stock ownership in 1986 in an attempt to bolster their capital positions.

Half of these conversions involved New York State mutual savings banks. These six institutions are: 15th-ranked Dime Savings Bank of New York FSB; 23d-ranked Empire of America FSB, Buffalo; 30th-ranked Dollar-Dry Dock Savings Bank, Bronx, New York; 46th-ranked Emigrant Savings Bank, New York; 63d-ranked Seamen's Bank for Savings FSB, New York; and 75th-ranked Rochester Community Savings Bank, N.Y.

Currently, another New York mutual savings bank, 14th-ranked Anchor Savings Bank FSB, Northport, is in the process of converting to stock form. Also since yearend, 25th-ranked Standard Federal Bank, Troy, Mich., converted to a stock savings bank in January.

Of the remaining six conversions in 1986, four were mutual savings and loans that converted to stock savings and loans. These four are: 55th-ranked AmeriFirst Federal Savings and Loan Association, Miami; 24th-ranked Talman Home Federal Savings and Loan Association of Chicago; 38th-ranked TCF Banking and Savings FA, Minneapolis; and 50th-ranked Benjamin Franklin Federal Savings and Loan Association, Portland, Ore.

The 70th-ranked Empire of America FSB, Fort Worth, Tex., part of the Empire of America FSB network, converted to a stock savings bank, as did its sister thrift in New York.

One institution — 62d-ranked Chevy Chase Savings Bank FSB, Chevy Chase, Md. — converted from a mutual savings and loan to a stock savings bank. It was formerly known as Chevy Chase Savings and Loan Inc.

Also, 12th-ranked City Federal Savings Bank, Elizabeth, N.J., and 28th-ranked Carteret Savings Bank FA, Morristown, N.J., changed from stock savings and loans to to stock savings banks. ■

Fortune Federal Expands On Florida's West Coast

Special to the American Banker

CLEARWATER, Fla. — In an effort to increase its market share in Florida's Pasco County, Fortune Federal Savings and Loan Association purchased one office and the deposits of two others from Duval Federal Savings and Loan Association.

Clearwater-based Fortune will pay an undisclosed price to bolster its operations in Pasco.

"It appears to be a good move for both companies," said Tim Rayl, banking analyst with the brokerage firm of Allen C. Ewing & Co. in Tampa. Mr. Rayl said the deal will allow Fortune to increase its base in Pasco while allowing Duval to back out of Florida's west coast market.

The $1.1 million-asset Duval Federal, based in Jacksonville, said it would concentrate on expanding its operations on the state's east coast.

Fortune said it expects to close on the transaction, which is subject to regulatory approval, on March 31. The bank will acquire approximately $41 million in deposits.

Spokesman Tom Myers said Fortune would purchase real estate and other assets of a Duval office in Elfers, a small town in Pasco County. Fortune also will purchase the deposits of Duval's offices in New Port Richey and Bayonet Point and service them from nearby Fortune branches.

Fortune executives said the company had targeted the rapidly growing Pasco market for expansion. Banking observes called the move a predictable continuation of Fortune's strategy to open offices in high-growth areas. ■

Magnet Cites Real Estate Loans For First Loss in 53-Year History

Special to the American Banker

CHARLESTON, W.Va. — Magnet Bank, which is based here, says it lost nearly $6.8 million last year because of continuing problems with real estate loans, but officials say the state's largest thrift should be in the black in 1987.

The loss was the first in Magnet's 53-year history. The continuing problems have caused Magnet to drop below minimum net worth requirements as of yearend, but officials said they also expect to reverse that in the first quarter of 1987.

Assets fell from $683.4 million to $599 million during 1986.

Another major West Virginia thrift, Fed One Savings Bank, Wheeling, said earnings jumped 33% in 1986, and at $2.6 million were the highest in that company's 53-year history. Assets now total $234.7 million.

Fed One said it sold its Buckhannon branch in 1986 and will concentrate on northern and north-central sections of West Virginia.

Magnet Bank reported a fourth-quarter loss of $4.7 million. In 1985, it earned $1.1 million in the fourth quarter and $3.2 million for the year, which was a record for the company.

About $3.5 million of the fourth-quarter loss was an addition to loan-loss reserves, while the remaining $1.2 million was from operating losses. The $15.3 million in reserves is to cover possible losses on real estate loans.

Problems stem from a group of real estate development and construction loans made in 1983 and 1984 that went sour. The bank no longer makes those types of loans, but Magnet's total of "scheduled items," which means delinquent loans and real estate it has received in foreclosure, ballooned to $67.6 million by last September.

On the plus side, the mortgage banking division had a record year, with $277 million in home loans in its seven-state territory. Checking account balances grew from $65.6 million to $76.9 million, and the recently formed corporate banking division, which makes consumer, business, and student loans, grew from $1.2 million to $17.6 million. ■

Possible Impact Of Brazil Moratorium On Earnings Per Share

	Decline in EPS For 1987
Citicorp	-18.0%
Chase Manhattan Corp.	-21.8%
Manufacturers Hanover Corp.	-27.3%
J.P. Morgan & Co.	- 9.6%
Chemical New York Corp.	-16.5%

Citicorp's decline is based on corporation's estimate of $190 million reduction in earnings if Brazil does not pay interest for 12 months and on PaineWebber Inc.'s earnings per share estimate of $7.75. Percentages for other banks are estimates published in a recent research report by PaineWebber.

Markets React To Rumors on Brazilian Debt

By BART FRAUST

NEW YORK — The reality of Brazil's debt moratorium and its possible impact on the earnings of U.S. banks was brought home to the financial markets Friday.

The awakening followed the disclosure that Citicorp, Brazil's largest U.S. bank creditor, had filed a statement with the Securities and Exchange Commission providing details of how the moratorium will affect the corporation's earnings if the payment halt continues all year.

In the 8-K filing, Citicorp said that if the Brazilian loans affected by the moratorium are placed on nonperforming status, the impact on Citicorp's earnings will be approximately $50 million after taxes in the first quarter and $190 million for 1987. In 1986, Citicorp earned a total of $1.058 billion.

Companies are required to file 8-Ks with the SEC whenever "material events" occur within quarterly reporting periods. Spokesmen for other large New York banks said their institutions had no similar plans to file 8-Ks regard-

Dallas Home Loan Bank Seeks $1 Billion Payback from FSLIC

By NINA EASTON and ROBERT GARSSON

In a move to avoid a qualified auditor's opinion, the Federal Home Loan Bank of Dallas on Friday demanded that the Federal Saving and Loan Insurance Corp. hand over more than $1 billion to back up guarantees the insurance fund has issued on the Dallas bank's advances to troubled thrifts, according to government sources.

If FSLIC complies with the demand, it will deplete the insurance fund's primary reserve, which now stands at just over $1 billion.

In a related development, Edwin J. Gray, chairman of the Federal Home Loan Bank Board, has asked the agency's attorneys to provide a legal opinion on the insurance fund's authority to borrow funds from the district bank system, according to government sources.

The Dallas bank's move comes as Congress wrestles with a plan to rescue the nearly depleted thrift insurance fund. If FSLIC's reserves do in fact drop as a result, it would likely add to the pressure for prompt consideration of a recapitalization.

Moreover, it could give additional impetus to a proposal put forward by the Reagan Administration and the Federal Home Loan Bank Board, which oversees FSLIC.

Many industry officials assert that the Treasury Department and Bank Board officials are attempting to create a crisis atmosphere in order to pressure Congress to adopt a Reagan Adminstration-backed recapitalization plan for

Thrifts Say Depositors Remain Calm Despite Warnings About FSLIC Woes

By MARK BASCH and LINDA ELLIS

Depositors at thrift institutions across the nation are expressing little concern about the financial health of the Federal Savings and Loan Insurance Corp., thrift executives say, despite dire warnings from high-ranking government officials about impending panic at savings institutions.

New questions about the FSLIC's health were raised two weeks ago by the General Accounting Office's finding that the insurer has a $3 billion deficit after allowing for necessary additions to the insurance reserve for contingent liabilities. Last week, Federal Home Loan Bank Board Chairman Edwin J. Gray, Federal Reserve Board Governor Martha R. Seger, and Senate Banking Committee member John Heinz, R-Pa., were among the regulators and congressmen who expressed concern about depositor confidence in the FSLIC.

But thrift industry officials and observers said last week that while some customers have raised questions about the safety of their deposits, they have shown little worry.

Insured depositors have demonstrated no lack of confidence that the federal government would back up the FSLIC, said Emanuel J. Falzon, president of Merrill Lynch Money Markets Inc., New York.

Merrill Lynch makes markets in in-

Thrifts Say Depositors Calm Despite FSLIC Warnings

Continued from Page 1

sured deposits for a number of thrifts, and in uninsured deposits of perhaps a dozen well-capitalized savings and loans nationwide. Both markets have only improved recently, Mr. Falzon said.

Uninsured depositors may be moving to thrifts because of increased concerns about the performance of some commercial banks, he said. Retail depositors are buying longer-term certificates of deposit as they try to take advantage of next year's tax rates, said Mr. Falzon.

The FSLIC's problems have not been a factor yet in the market, he said. "Investors obviously have a lot of confidence in FSLIC and the federal government," Mr. Falzon said.

Instead of concerns about an insolvent FSLIC, a recapitalized insurance fund may force liquidity problems on troubled thrifts that have marketed their own uninsured certificates of deposit, brokers say. Investors might react sharply if they realize that technically insolvent thrifts now could be shut down, leaving uninsured depositors with losses above the $100,000 limit of FSLIC coverage.

A number of Texas savings and loans grew quickly with the help of uninsured deposits. But most of those institutions have worked to let those certificates run off as problems escalated in their loan portfolios, said Frank W. Anderson, a thrift consultant with Ferguson & Co., Dallas.

For example, the Independent American Savings Association, Irving, Texas, reduced its volume of uninsured deposits from 26% of all deposits at yearend 1985 to just 4% six months later, according to figures compiled by Lyons, Zomback & Ostrowski Inc., a New York-based consulting firm.

"We've had some questions from our insured depositors, but we're able to reassure them that their money is safe," said Susan Cook, a spokeswoman for the thrift.

"Our money desk people say they haven't heard beans from our institutional depositors," said David Webster, a spokesman for Commonwealth Savings Association. Just as at Independent, the only questions have come from insured depositors. But Commonwealth reassures those depositors that their money is safe with the federal backing of the FSLIC, Mr. Webster said.

Depositors Unfazed by GAO Report

Elsewhere around the country, thrift executives reported little worry among their customers about the safety of deposits.

"I did some checking right after the GAO audit came out to see what kind of impact it might be having," said Joe C. Morris, chairman of the Columbia Savings Association FA, Emporia, Kan., and chairman of the U.S. League of Savings Institutions. "To my knowledge, we've had no withdrawals or customer concerns because of the GAO report."

He said that in Columbia's 12 offices, totaling some 40,000 accounts, the thrift recorded only two customer inquiries regarding FSLIC insurance.

Mr. Morris also said he checked with the Federal Home Loan Bank of Topeka, which reported a limited number of inquiries, and with thrifts in other parts of the country. "I really have not heard of any problem around the country," he said.

Despite the warnings from Sen. Heinz, Pennsylvania thrift industry officials seemed unconcerned about consumer confidence. A spokesman for Mr. Heinz said the senator has received 60 to 70 letters a week for the past four weeks and about 1,000 phone calls, primarily from senior citizens.

But those constituents are not extending their worries to the state's savings and loan industry. "We really haven't gotten a single call," said James H. Stoup, vice president of the Pennsylvania Association of Savings Institutions.

"So far, we haven't had any of that kind of problem," said Bruce Boyle, vice president for public relations at Atlantic Financial Federal, Bala-Cynwyd, Pa., the state's largest FSLIC-insured thrift. "To my knowledge, we haven't received any queries from customers."

Keeping the Faith

The Synod of the Trinity of the Presbyterian Church in Harrisburg, Pa., is keeping its faith in the savings and loan industry. Administrative religious groups such as the Presbyterian Synod are big buyers of jumbo CDs from thrifts and are also conservative about their investments. But Andrea Snyder of the Presbyterian's administrative body said the church will continue to buy new CDs as the old ones mature.

A spokesman for Arlen Specter, Pennsylvania's other Republican senator, said he has received about 100 pieces of mail, a figure he said was insignificant.

Rep. Claude Pepper, D-Fla., who represents a state with both a large senior citizen population and some publicized savings and loan problems, has gotten few calls, a staffer said. And congressmen from Texas, where the bulk of the nation's troubled savings and loans are located, also reported no unusual concern.

"We have been fortunate thus far," said Bank Board Chairman Gray in a March 9 letter to House Banking Committee Chairman Fernand J. St Germain, D-R.I. But Mr. Gray said he is concerned about public confidence in the FSLIC.

"The FSLIC could not call on enough liquidity to resolve problems resulting from any material loss of public confidence. Temporary closures proved necessary in both Ohio and Maryland. Any systematic loss of public confidence could also spread to individual FDIC-insured problem institutions," he wrote.

"We've had no calls whatsoever from any depositors regarding a lack of confidence," said B. Francis Saul 2d, chairman and president of Chevy Chase Savings Bank FSB, Chevy Chase, Md. Chevy Chase Savings was one of the privately insured thrifts in Maryland that was temporarily closed and forced to obtain federal deposit insurance in 1985.

In Ohio, another state that was hit by a thrift crisis two years ago, at least one thrift executive said depositor concerns about the FSLIC have not been a serious problem. Richard Gilbert, chief executive officer of the Citizens Savings Bank, Canton, Ohio, said that for the few depositors who have asked questions in recent weeks, thrift officers have first stressed their company's soundness and secondly reminded the depositors that the FSLIC is backed with the full faith and credit of the U.S. government.

The president of the New York League of Savings Institutions said no erosion of consumer confidence has surfaced in that state.

"We have seen no evidence of any diminution in depositor confidence in New York," said Paul Schosberg. "And while there has been media attention given to the FSLIC recapitalization issue, we see no evidence that there is any kind of tremor going through customers."

"There's not a lot of action," said Thomas P. O'Toole, executive vice president of retail banking at City Federal Savings Bank, Bedminster, N.J. "We had some questions last week from the branches asking if the FSLIC guarantee is any good, but no one is jumping up and down."

"We had to explain to people what it meant for FSLIC to be insolvent, and to do that we put out a statement to all our branches. We noted that no one has ever lost a penny in an FSLIC-insured account and we don't think anyone ever will," he said.

"We've had some calls," said Robert D. Pierson, vice chairman of Carteret Savings Bank, Morristown, N.J., "but more from [our depositors in] Florida than here. It's a retirement area with people who have a greater percentage of their net worth in savings institutions than up here. There is also some concern on the jumbo CDs, but we have taken steps to assure people that FSLIC is, or will be made, sound."

Thrift executives in California said they did not detect any unusual deposit withdrawals as a result of news reports that the FSLIC is insolvent.

A 'Nonissue' in California

"We've had two or three calls, but no withdrawals as a result of it," said one thrift executive in Northern California. "It's a nonissue."

However, other thrift executives admit that some customers are worried, noting an increase in inquiries by customers.

"It's a concern," said Monica Wiley, a spokeswoman at Home Federal Savings and Loan Association, San Diego. "Our branch managers have had questions [from customers]" in the past two weeks.

Home Federal is supplying branch managers with a newly issued four-page question-and-answer sheet from the U.S. League of Savings Institutions, which addresses many of the questions.

Harold Lee Jr., Wisconsin's Deputy Commissioner of Savings and Loan, put out a statement assuring depositors that their funds are safe in FSLIC-insured thrifts. "There were a lot of phone calls to savings and loans around Wisconsin and a few to our office," he said.

Mr. Lee said the concerns have eased since he released the statement, which said "there are sufficient funds available and there is a positive cash flow from insurance premiums."

A West Coast thrift executive said the news reports about the FSLIC's condition also worry federal thrift regulators.

"As soon as the GAO article came out, our supervisory agent asked us to keep in daily contact as to unusual deposit activity," he said.

Industry officials are increasingly angry about the public statements made by Bank Board Chairman Gray about the FSLIC's financial problems. Mr. Gray is pushing lawmakers to pass a measure that would pump additional funds into the FSLIC.

"The feeling is very, very high against him," said one West Coast thrift executive, echoing the sentiments of other thrift executives last week. They said Mr. Gray is damaging public confidence in the thrift system.

Mark Clark, a spokesman for the U.S. League, accused some proponents of an FSLIC recapitalization plan supported by both the Bank Board and the Treasury of trying to raise depositor concerns and thus scare Congress into passing the measure.

He accused them of releasing a steady stream of letters and speeches aimed at arousing investor fears.

"It's a very risky strategy," he said.

Paul A. Willax, president and chief executive officer of Empire of America FSB, Buffalo, said that he hasn't seen major problems with depositor confidence, but that repeated warnings about the FSLIC's problems from government officials without action being taken to solve them could lead to a loss of confidence.

"I think it's a very volatile, dangerous, explosive issue," he said. "Confidence in the banking system is what makes it go."

Clearing Houses . . .

Continued from Back Page

active regional associations — counting commercial volume and government items received — included two single-holding-company clearing houses for the first time. These companies — Chase Manhattan Corp. and BankAmerica Corp. — along with Mellon National Corp. each own an automated clearing house and hold a seat on the national association's board. Nine other organizations have applied to do the same.

Chase Automated Clearing House Inc., which serves Chase Manhattan Bank of New York and Chase Lincoln First Bank of Rochester, ranked seventh. Chase's transactions otherwise would have gone through the New York Automated Clearing House, making it larger than Calwestern.

Electronic Payments Exchange, which serves Bank of America and Seattle-First National Bank, ranked ninth.

In third place after Calwestern and New York was Mid-America Payments Exchange, Kansas City, one of the fastest growing regional groups. It reported 31.6 million commercial debits and credits. Its debit total alone rose 75% in the year.

Rounding out the top 10 in total payments were the New England Automated Clearing House, Boston; Midwest Automated Clearing House, Chicago; Southwestern Automated Clearing House, Dallas; Chase ACH; Upper Midwest Automated Clearing House, Minneapolis; Electronic Payments Exchange; and North Carolina Automated Clearing House. ■

The new ad shows the bankers thinking, "Did we just fund their new credit card?" It also has a royal-blue banner on the outside corner that shouts, "Attention bankers! American Express just came out with their new Optima credit card." ■

Pennsylvania Expands Time-Deposit Program

Special to the American Banker

HARRISBURG, Pa. — The Pennsylvania state treasury is expanding its time-deposit program for banks and savings and loan associations in smaller communities by making available an additional $30 million in deposits.

State Treasurer G. Davis Greene Jr. said the new deposits will provide more funds for local financial institutions, which they can loan out at reasonable rates to area businesses and consumers.

Under the existing program, the state treasury has $29,964,000 in time balances in 151 financial institutions. Deposits must be federally insured or, if over $100,000, collateralized.

If deposits have to be apportioned, Mr. Greene said, attention will be given to equitable geographic distribution and to loan-to-deposit ratios.

Rates on deposits until June 30 will be 20 basis points over the bond-equivalent yield on the latest auction of 180-day U.S. Treasury bills. ■

Automated Clearing House System Still Struggling

Pace of Growth and Private Participation Are Up, but Volume Is Disappointing

By JEFFREY KUTLER

New York

THE AUTOMATED clearing house system handled almost three quarters of a billion transactions last year, but no participant is rejoicing about it.

Thirteen years after they formed a nationwide payment network, the regional automated clearing houses continue to disappoint bankers who expected to have replaced billions of checks by now with paperless transactions.

Clearing house supporters, who are concerned about its ultimate viability, want to see the system's transaction volume grow more quickly than is shown in the *American Banker*'s second annual survey of automated clearing house activity. The survey continues Tuesday with a listing of the largest banks in terms of clearing house payments initiated.

National automated clearing house volume grew 27% in 1986. This overall transaction growth rate is healthy but the actual numbers remain relatively small in comparison with total payments.

Last year was the first year in which depository institutions initiated more automated clearing house payments than did the federal government.

Passing the billion-transaction mark would be an encouraging sign for the network's future, but it is elusive. It would take an unprecedented 34% growth spurt to reach that plateau in 1987.

Big as it appears, one billion would be equal to only 2% of the estimated 45 billion checks written annually in the United States.

"As long as it stays below 2%, that is sad, especially for a system that has been in place since the early 1970s," said George C. White, the payment systems consultant and self-appointed gadfly of the automated clearing house movement.

"The numbers show we are in good shape now, and it is looking better for the future," countered William R. Moroney, who as president of the National Automated Clearing House Association is the system's No. 1 cheerleader. But he acknowledged that "this is not going to be a year of tremendous growth — 50%, 60%, or 100% — that many people would like to see."

There are indeed glimmers of hope in systemwide transaction trends, which will occupy the thoughts of nearly 1,000 people gathering in San Diego this week for the National Automated Clearing House Association's annual conference.

Most encouraging: The 27% increase, to 743.4 million transactions from 586 million in 1986, was the biggest percentage gain since 1983, when the network was virtually half its current size. By contrast, checks are multiplying by 4% to 5% a year.

Also, 1986 was the first year in which depository institutions initiated more automated clearing house payments than did the federal government.

As recently as 1982, Social Security payments, federal retirement benefits, and other parts of the U.S. Treasury Department's direct deposit program accounted for two of every three automated clearing house transactions. Were it not for the government's dominant participation and influence, and the Federal Reserve System's operational and financial support, the automated clearing house system would not have survived its early years.

Privately originated debit and credit entries in 1986 outnumbered government payments by 398.1 million to 345.3 million, or 54% to 46%. In 1985 government volume held the edge, 297.5 million to 288.5 million, or 51% to 49%.

The commercial volume, dominated by preauthorized premium payments to insurance companies and by the direct deposit of salaries, grew 38% to 398.1 million items, compared with a 32% rise to 288.5 million in 1985.

The annual growth rate of government volume also increased last year as the Treasury promoted new uses of the automated clearing house system, such as remittances to and from corporations. Government items rose 16% to 345.3 million in 1986, compared with an 11% rise to 297.5 million a year earlier.

With its newfound majority status, the private sector has thus come of age as an automated clearing house participant. Observers of the clearing house scene say that responsibility for the system's often-questioned viability now falls more squarely on the banking community than on the Treasury or Federal Reserve.

Association Revises Calculation

For the second consecutive year, the *American Banker* has compiled transaction statistics showing that the network's size and growth rates are smaller than those historically published by the National Automated Clearing House Association.

In response to criticism that its method of counting transaction volume inflated the system's true size, the association subtracted from its 1986 statistics payments that were counted twice in earlier years. The association's total for nationwide, private-sector clearing house volume — 398.1 million — concurs with the *American Banker*'s estimate.

Of those 398.1 million commercial debits and credits, 362.6 million were handled at one time or another by the Federal Reserve facilities that provide processing services to all but one of the 32 regional clearing houses.

The rest were accounted for in the New York Automated Clearing House area, which processes intraregional payments independent of the Federal Reserve System, and by items cleared privately within California, Hawaii, and Arizona.

Added to the 398.1 million commercial entries were 345.1 million Treasury payments, almost all of them direct deposits and similar credit items, according to the Federal Reserve.

Using its old method, the National Automated Clearing House Association tabulated the sum of commercial payment originations as reported by all of its regional members. Until now the association made no effort to subtract transactions that flowed between regions, which were counted at both the sending and receiving ends.

Under the old method, commercial volume would have totaled 646.3 million in 1986 instead of 398.1 million. The commercial-plus-government total would have been 991.6 million — closing in on the magical billion — instead of the more accurate 743.4.

"We think it was essential to try to standardize the numbers and make them as realistic as we could," Mr. Moroney said. "My only concern is that people will compare our new number with the one we released last year and come away thinking we had a terrible year."

Automated Clearing House Volume: Government v. Commercial

	Government-Originated			Commercial-Originated			
Year	($ Mil.)	Annual Growth (%)	Share of Total (%)	($ Mil.)	Annual Growth (%)	Share of Total (%)	Total
1986	345.3	16	46	398.1	38	54	743.4
1985	297.5	11	51	288.5	32	49	586.0
1984	268.5	12	55	218.0	38	45	486.5
1983	240.5	15	60	158.7	49	40	399.2

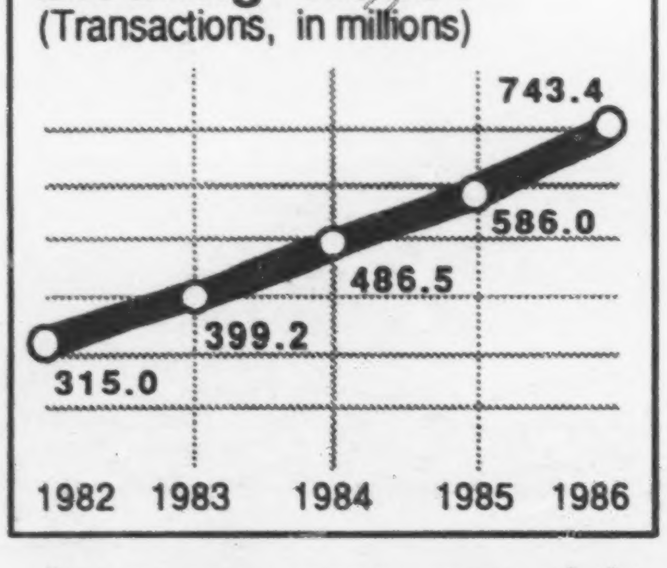
The National Automated Clearing House Association did not count as many government items as are in the *American Banker* figure. So the grand total it came up with last week in preparation for its annual conference — 701.1 million — is actually lower than the 766.2 million that it reported for 1985, which included double counting.

Still there are disagreements about which set of statistics best represents the true state of automated clearing house affairs. As with all statistics, there is probably a small margin of error in a tabulation of hundreds of millions of individual items.

Officials of several regional clearing house associations are trying to convince others that any nationwide total, double counted or not, understates the importance of direct-payment services, because they include only interbank transactions.

Sizable numbers of automated clearing house-type transactions never leave the banks in which they are originated, because the payments flow either for internal purposes or between two customers of the same institution.

Annual Volume of Automated Clearing House
(Transactions, in millions)



Just as any accurate count of the number of checks written in the United States would have to include "on-us" items that are cleared within the banks of first deposit, so too should there be a count of on-us automated debits and credits, these advocates contend.

"We believe that on-us figures are close to 20% in our region," John Borden, president of Mid-America Payment Exchange, Kansas City, said. "Most leading originators are major institutions with a significant correspondent business, which 'kills' a lot of ACH items locally or regionally. If this is true for us in the Midwest, I suppose it could be true in other regions, in spades."

There are indeed many institutions where on-us volume adds significantly to outgoing automated clearing house entries, research by the *American Banker* reveals.

Norwest Bank Minneapolis, the flagship bank of Norwest Bancorp. in the Upper Midwest Automated Clearing House, typifies Mr. Borden's point. Norwest Bank ranked among the top five automated clearing house originators nationwide with 9.6 million debits and credits. But that does not include another 7 million on-us items, which flow among the holding company's 70 affiliated banks.

United States National Bank of Oregon, Portland, originated 1.7 million commercial debits and credits into Oregon Automated Clearing House Association. Counting intrabank transfers handled in the same internal processing system, the bank's ACH-type payments climb to 4.5 million.

At Wachovia Bank & Trust Co. in North Carolina, including on-us volume raises its clearing house volume to 9.1 million from 7.3 million; at First Bank Minneapolis it would have been 6 million instead of 3.7 million.

Higher aggregate numbers might give the automated clearing house system more prestige, but Mr. Borden is currently outnumbered by those who think on-us statistics would be distorting.

"We would say that on-us items would double what goes through the automated clearing house, said Peter Yeatrakis, executive director of the Calwestern Automated Clearing House Association in San Francisco, the nation's largest with 73 million total items in 1986. But he is not ready to count on-us entries alongside interchange items.

"In the strictest sense, on-us is not ACH activity, although it feeds the same business," he said.

Martin Schumer, executive director of the New York Automated Clearing House Association, the second largest with 57.4 million originated payments, also opposed inclusion of on-us data.

"Certainly there is a huge, hidden volume out there, but no one knows how big it is," he stated. "While it says something about electronic funds transfer as a whole, I don't think it belongs in ACH statistics, if for no other reason than that you don't have the same reporting standards and accountability."

He pointed out that national clearing house volumes are reported by associations and can be verified by the Federal Reserve System. Individual financial institutions would be the source of on-us information that could not be as easily confirmed.

According to National Automated Clearing House Association and *American Banker* data, the group of 10 most

COMMENT

A Guide for the Perplexed Investor

By SANFORD ROSE

Mortgage investors have been guided for the past few years by yields derived from a very simplified and dangerous analysis of duration. Basically, the investor projects the recent prepayment rates on a mortgage security into the future and adjusts the expected cash flows accordingly. Then he computes the yield that discounts these adjusted flows back to the observed market price of the security.

This cash-flow yield is compared to the yield on a treasury of the same purported average life to arrive at a spread. The higher the spread over treasuries, the better the investment, at least in the view of many market participants.

Yet, in the opinion of a growing number of analysts, the size of the mortgage-treasury spread, so computed, is next to meaningless. According to David Jacob and Alden Toevs, respectively vice president and principal of Morgan Stanley, mortgage-backed securities, even those that are free of credit risk, ought to yield more than treasuries for three reasons.

Hellerman Gets 32-Year Term in Prison And $1.75 Million Fine in Florida Fraud

By BART FRAUST

NEW YORK — A federal judge on Monday sentenced Michael Hellerman, one of the early beneficiaries of the federal witness protection program, to 32 years in prison and a fine of $1.75 million in connection with his involvement in a scheme to defraud Florida Center Bank, a small Orlando, Fla., bank that failed last April.

Judge G. Kendall Sharp of the U.S. district court in Orlando immediately placed Mr. Hellerman into the custody of U.S. marshals until he is assigned to a prison. On Jan. 28, Mr. Hellerman, who now goes by the name of Michael Rapp, was convicted of seven counts of bank fraud and conspiracy. He received the maximum penalties.

Two others convicted of taking part in the scheme, New York money broker Mario Renda and Oklahoma investor Charles Bazarian, also were sentenced on Monday.

Mr. Renda, chairman of First United Fund Ltd., a Garden City, N.Y., money brokerage, and Mr. Bazarian, chairman of C.B. Financial Corp., an Oklahoma City investment firm, were each sentenced to two years in prison and fined $100,000.

On Feb. 12, Mr. Renda was convicted on one count of conspiracy. He faced a maximum penalty of five years in prison. That same day, Mr. Bazarian was convicted on three counts of fraud and conspiracy. He had faced a maximum penalty of 15 years in prison.

Mr. Renda and Mr. Bazarian are free pending appeal of their convictions.

First United Fund is the plaintiff in a libel suit against the *American Banker*.

Chase Remains Clearing House Volume Leader

Bank of America Second In Electronic Payments

By JEFFREY KUTLER

NEW YORK — Chase Manhattan Bank continues to dominate the automated clearing house business, as it has almost since the paperless payment system's inception in the 1970s.

AN **American Banker** SPECIAL REPORT

Chase originated one in every seven commercial transactions that flowed through the automated clearing house network in 1986, according to figures compiled by the *American Banker*.

At 55.4 million clearing house items, the New York bank initiated four times the volume of its nearest rival, Bank of America, San Francisco.

The gap separating the two leaders was the same as in 1985, the first year for which the *American Banker* published a ranking of the top 100 automated clearing house banks.

Top ACH Originators

	1986 Volume (in Millions)
1. Chase Manhattan Bank	55.4
2. Bank of America	13.9
3. Mellon Bank	10.9
4. Norwest Bank Minneapolis	9.7
5. Marine Bank of Springfield, Ill.	9.2

But Chase's share of this market, at 13.9% of the estimated 398.1 million private-sector clearing house payments originated by financial institutions in 1986, shrank by four-tenths of

Most transaction data were supplied to American Banker by regional automated clearing houses on behalf of their member financial institutions. In some instances, data were confirmed or obtained directly from Federal Reserve Banks or from the originating banks themselves. NA-Where debit and credit breakdowns are not given, information sources had not tabulated them in time for publication. [1] For some members of the Calwestern Automated Clearing House Association, totals include transactions originated in General Electric Information Services Co.'s private network. Geisco totals were not broken into debits and credits. Except for Bank of America, which supplied its own data, the debit-credit breakdowns for these banks were estimated by American Banker.

Chase Remains Clearing House Volume Leader

Continued from Page 1

a percentage point.

This indicates that other financial institutions are beginning to market these payment services more aggressively than in the past.

At least eight of the top 100 automated clearing house originators doubled their yearly volume in 1986. One of these — Centerre Bank in St. Louis — nearly tripled, and several others came close to doubling 1985 totals. (A list of the top 100 originators is on page 14.)

Still, Chase Manhattan remained in a class by itself.

Chase's transaction total rose 34% in a year when total commercial volume, which does not include government payments, rose 38%. Bank of America increased 37% to 13.9 million.

As was the case in the previous year, the distribution of automated clearing house volume was not in proportion to bank asset size.

Citibank, the nation's biggest bank, which has been criticized in automated clearing house circles for not pulling its weight, made partial amends in 1986 by increasing its activity 89% to 2.5 million. This was only 38th best among clearing house originators, but an improvement over Citibank's 1985 rank of 55th.

At the opposite extreme, Marine Bank of Springfield, Springfield, Ill., the 477th largest commercial bank according to yearend 1986 assets, ranked fifth in clearing house items with 9.1 million.

Its automated clearing house ranking was unchanged from 1985, but it did surpass Northern Trust Co. to become the largest originator in the Chicago-based Midwest Automated Clearing House. Northern Trust, the 50th largest bank in the United States, slipped to sixth place nationally from fourth in the 1985 automated clearing house survey.

The $609 million-asset Marine Bank trailed fourth-place Norwest Bank Minneapolis, the nation's 54th largest bank, by fewer than 500,000 items.

Marine Bank gets most of its business from State Farm Insurance Co., Bloomington, Ill., and other insurers for which the bank processes automatic payments of policy holders' premiums.

For six of the top 10 originating banks, these types of preauthorized payments, known as debits, constitute a majority of clearing house activity.

This year's *American Banker* table is the first to break out debits and credits — a common example of the latter is direct payroll deposits — where this information was available.

BofA Leads in Credits

Chase, third in assets after Citibank and Bank of America, led in debits with 47.9 million. It was second in credits with 7.5 million, trailing Bank of America's 9.1 million.

Mellon Bank, Pittsburgh, was third in credits with 6.3 million, less than 100,000 in front of Northern Trust Co.

On the debit side, Marine Bank of Springfield was a distant second to Chase, at 8.8 million. Next came Norwest Bank Minneapolis at 7.3 million and Wachovia Bank and Trust Co., Winston-Salem, N.C., at 5.4 million.

Chase's debit total is still growing rapidly. Its clients include such major insurance companies as Metropolitan Life and the Equitable Life Assurance Society.

Chase also is pursuing the new business of processing retail point-of-sale transactions in the form of automated clearing house debits. It will process debits for Exxon Co. USA as the petro-

Clearing House . . .

➻ Continued from Page 14

leum marketer expands its consumer debit card program this year, according to James J. Hopes, president of Chase Automated Clearing House Inc., the private clearing house for Chase Manhattan and Chase Lincoln First Bank, Rochester, N.Y.

Chase ACH Inc. started formal operation in the spring of 1986, taking a majority of its 47.9 million debits and 7.5 million credits for 1986 out of the New York Automated Clearing House.

Debits outnumbered credits for six of the top 10 originating banks. Of the 398.1 million automated clearing house items initiated in the private sector last year, debits exceeded credits by about a 3-to-2 ratio, according to the National Automated Clearing House Association.

Meanwhile, virtually all of the 345.3 million clearing house items originated as part of the U.S. Treasury Department's direct deposit program, which includes Social Security benefits and federal salaries, were credits.

Impact of Consolidation

Gains in standing among the top 100 automated clearing house originators were more spectacular than any drops that occurred — another sign that more banks are becoming more active in soliciting new business.

Among the top 10, Mellon Bank, at No. 3 with 10.9 million total items, rose three places, thanks mainly to its consolidation of back offices with Mellon Bank (East), Philadelphia. Mellon as a whole registered a 29% increase over 1985's combined volume.

Wells Fargo Bank, San Francisco, encompassing the operations of Crocker National Bank, with which it merged, rose to ninth place from 25th. Their automated clearing house total grew 70%.

Bank One, Columbus NA in Ohio increased its volume, mostly debits, by 92% to jump into 10th position from 18th in 1985. Bank One's Dayton affiliate was also on the list, at No. 48. Bank One, Indianapolis, the former American Fletcher National Bank, fell short of the 100th spot by less than 10,000 items.

Consolidating the automated clearing house operations of such superregional bank holding companies would alter the complexion of the top 100 listing.

Considered as one entity, the three Bank Ones generated 8.4 million transactions, good enough for seventh place if all else stayed the same.

First Wachovia Corp., which plans to consolidate clearing house operations of subsidiaries Wachovia Bank and First National Bank of Atlanta, would be close to the 10.9 million of No. 3 Mellon Bank.

Norwest Corp., Minneapolis, had three affiliates among the top 100 originators, adding up to 15.6 million items. These do not include seven million automatic debits and credits cleared within Norwest Bank Minneapolis NA, which are known as "on-us" items and are excluded from these statistics. On-us items are cleared within the banks of first deposit.

Norwest banks, considered as one, would be bigger than Bank of America and second only to Chase, even if Bank of America's volume is augmented with that of its affiliate Seattle-First National Bank.

The merger of Connecticut Bank and Trust Co. NA, Hartford, 12th on the list, with Boston-based Bank of New England, 41st, would vault them ahead of No. 7 First National Bank of Boston if clearing house operations were combined.

Five members of First Interstate Bancorp, Los Angeles, made the top 100: the First Interstate banks of Okla-

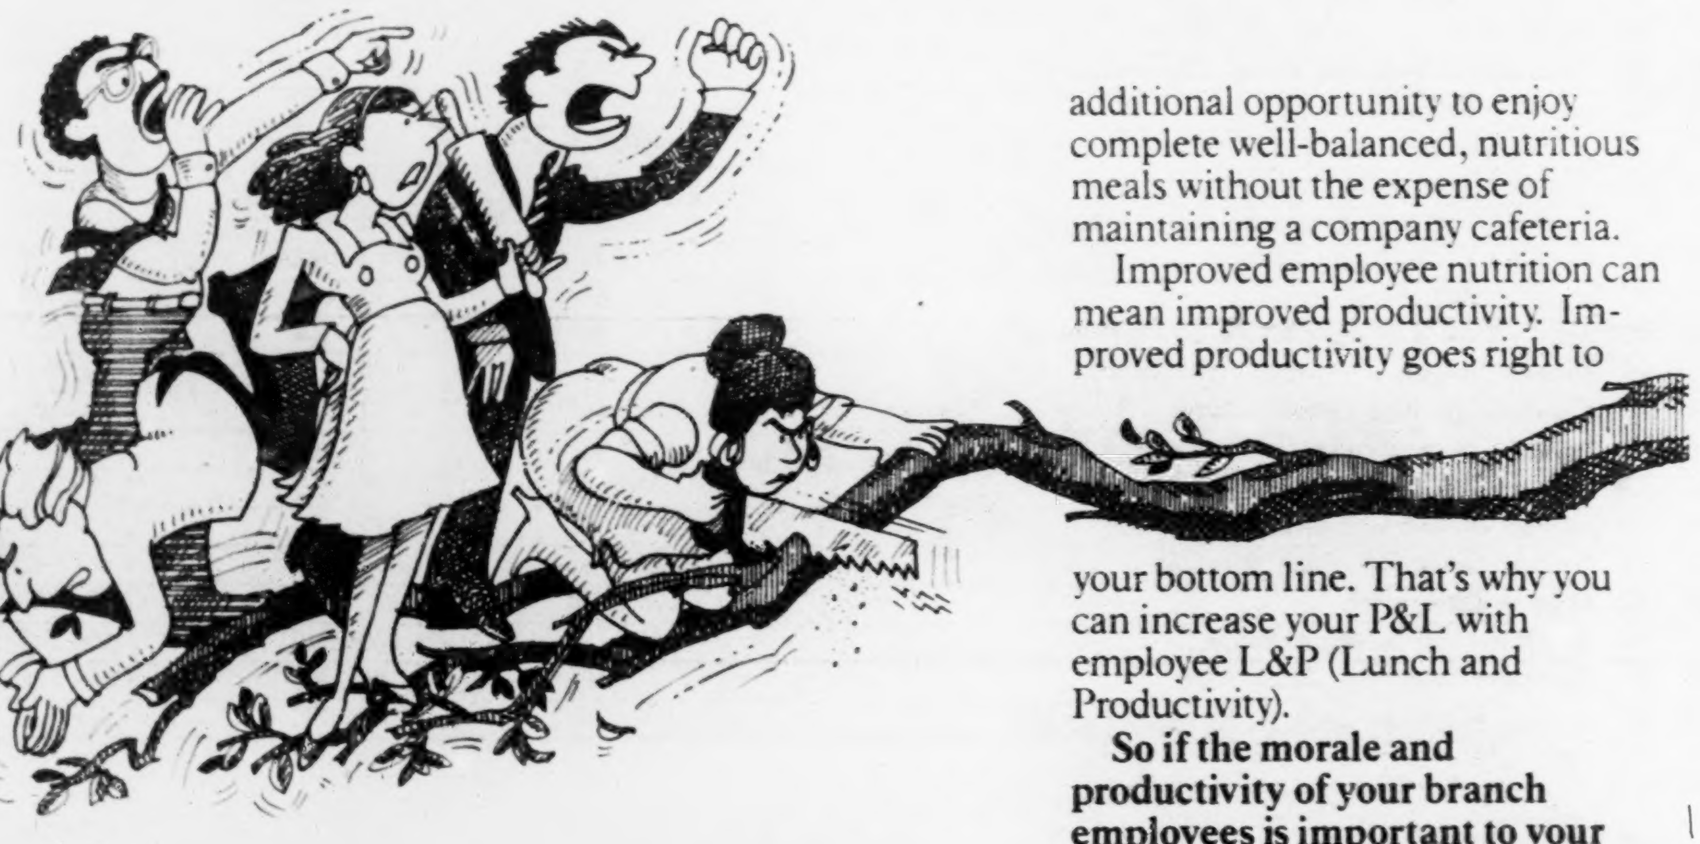
"Are your employees leaving your branches?"



"If turnover at your branch offices is driving you up a tree, the Jacques Borel Coupon Employee Dining Program can stem your problem."

One of the reasons it's hard to keep branch office employees is that up to now you couldn't offer them all the benefits you offer at the main office, particularly a subsidized meal plan. Now there's the Jacques Borel Coupon Employee Dining Program, the subsidized meal plan good at hundreds of restaurants. It's like a company cafeteria your employees can carry in their pocket.

The Jacques Borel Coupon Employee Dining Program is a simple subsidized employee meal program you can offer to all your employees. A tangible, highly visible, daily benefit that improves morale and productivity among your current workers and provides you with a unique way to attract and keep quality employees, now and in the future. We provide your company with Jacques Borel Coupons redeemable in restaurants throughout Manhattan. You issue the coupons to your employees for full value and your employees, through payroll deductions, pay only a portion of that amount. They can use them as cash at any of the participating restaurants. By subsidizing the cost, you offer your employees an additional opportunity to enjoy complete well-balanced, nutritious meals without the expense of maintaining a company cafeteria.

Improved employee nutrition can mean improved productivity. Improved productivity goes right to your bottom line. That's why you can increase your P&L with employee L&P (Lunch and Productivity).

So if the morale and productivity of your branch employees is important to your bottom line, the Jacques Borel Coupon Employee Dining Program can help you improve your P&L through improved employee L&P. Call me or fill out the coupon below to get all the details as well as a copy of my booklet, "White Collar Productivity".

Chase Continues to Dominate Automated Clearing House Business

Continued from Page 15

homa (No. 22), Arizona (32), California (44), Denver (74), and Washington (89). First Interstate Bank of Oregon, at 105th, just missed the list.

Added together, the six would have fallen just shy of 11 million transactions, about where No. 3 Mellon now stands.

Individual Gainers

One of the most impressive rises in a bank's own right was that of M&I Marshall & Ilsley Bank, Milwaukee, only the 145th largest in the country but now the 13th biggest clearing house originator, up from 39th in 1985.

M&I's transaction total rose 145% in 1986, to 4.2 million from 1.7 million. This came on the strength of a new debit contract with Northwestern Mutual Life Insurance Co., said James Jossie, a vice president at the $2.7 billion-asset M&I.

Centerre Bank in St. Louis had the biggest percentage gain of all — 194%, to 3.5 million items from 1.2 million. The bank shot up to 21st place from 60th.

Centerre typified the stellar performance of Mid-America Payment Exchange, better known as MPX, the automated clearing house association based in Kansas City, Mo.

Of the top 100 originators, 14 came from MPX's eight-state territory. Five of these increased transactions by more than 100% over figures in the 1985 top 100: Centerre; First Interstate Bank of Oklahoma in Oklahoma City (formerly First National Bank & Trust Co.); Boatmen's First National Bank of Kansas City; Commerce Bank of Kansas City; and United Missouri Bank of Kansas City NA.

The New York Automated Clearing House Association was second to MPX in the number of members making the top 100 — 11 including Chase Manhattan.

The Southwestern Automated Clearing House in Texas contributed seven of the 100 largest, but three of these are in the InterFirst Corp. holding company. The Calwestern association on the West Coast and Central Regional Automated Funds Transfer System in Columbus, Ohio, each had six member banks on the list.

"MPX is one of the few associations that has a full-blown marketing campaign, including people that make calls on corporations, and it is really starting to pay off," said William R. Moroney, president of the National Automated Clearing House Association in Washington.

"They have done things that other associations, including the national one, can learn from, and I think you will begin to see that kind of transfer taking place in the months ahead," he added.

Conversely, some regional associations, such as Wisconsin's, do not even have full-time staffs, relying instead on banker volunteers and Federal Reserve support. This may have to change now that M&I and Northwestern Mutual Life have catapulted Wisconsin's association into the big league of originators.

Other big individual gainers included First National Bank of Atlanta, which rose to 28th place from 44th as transactions increased 120%, and Bank of Hawaii, Honolulu, which jumped to 66th from 100th on a 112% growth rate.

There were some losers: Trust Company Bank, Atlanta, lost one-third of its 1985 volume of 5.6 million and fell to 19th place from seventh.

Huntington National Bank, Columbus, Ohio, lost 45% of its 1985 volume and 51 places in the standings, to 77th from 26th.

In both cases, corporate customers decided to take their business to other banks. The percentage losses by these and others, such as Norwest Bank Nebraska (22%), Philadelphia National Bank (7%), and Chase Lincoln First Bank (8%), were more than offset by gains elsewhere.

Nine banks not among the top 100 last year made the list this year, replacing banks that either merged or grew too slowly to keep pace.

Five 1986 newcomers came from the MPX region, including No. 100, FirsTier Bank, Lincoln, Neb. Its 768,516 transactions were 28% more than what was necessary to be No. 100 a year earlier.

The most active new arrival was First Citizens Bank & Trust Co., Raleigh, N.C., in 81st position with just over a million items.

The automated clearing house market is highly concentrated in relatively few of the 17,500 financial institutions that are members of the 32 regional associations.

The top two originators — Chase and Bank of America — accounted for 69.3 million of the 398.1 million private sector transactions in 1986, or 17.4% of the market. This was down slightly from 17.8% of the previous year's 288.5 million commercial items.

The concentration ratio for the top five firms was 24.8% in 1986, compared with 25.5% in 1985.

The top 10 controlled 33.5% of the 1986 market, compared with 34.7% a year earlier.

This is the second of two articles on the *American Banker's* annual survey of automated clearing house activity. The first story appeared in Monday's paper on page 24.

This announcement appears for purposes of record.

Mellon Offering No-Fee Checking In Philadelphia

Special to the American Banker

PHILADELPHIA — Mellon Bank (East), the Philadelphia-area subsidiary of Pittsburgh's Mellon Bank Corp., is offering a new, no-charge checking account as part of what it calls a banking program for low- and moderate-income communities.

The account requires no minimum balance, has no monthly maintenance fee, and allows six free checks a month, with a 50 cent per check charge after that. There is no charge for monthly statements, with canceled checks, but there is a charge of $5 for a book of 100 checks, after an initial 10 free checks.

There are no income or residence requirements. The new account allows welfare recipients to avoid often costly fees charged by check-cashing agencies.

The Mellon's program is unique here, according to spokesman James Smart, because it will be promoted widely in low- and moderate-income communities, via ads in community newspapers and during an "aggressive outreach program" of community seminars on financial topics. The program was introduced at a forum last week for almost 100 leaders of community organizations at the bank's downtown headquarters.

General requests for "lifeline" banking from community organizations here and elsewhere were considered in developing the program, Mellon said.

The bank added that minimums on small loans have been reduced from $2,500 to $1,000 to make borrowing easier.

Mellon also announced the formation of the Community Development Corp. by the Pittsburgh-based holding company to work with community groups statewide to support housing and small business. It will act as adviser and as lending or equity partners in neighborhood projects.

The unit was initially funded with $500,000 in seed money, plus a $3 million additional line of credit from Mellon. ■

Sears Subsidiary Leads Banks in Deposit Gains

Delaware Unit Benefits From Discover Card Tie-In

By L. MICHAEL CACACE

American Banker
TOP 300 BANKS

Fastest Growing Bank in Top 300

Greenwood Trust Co. — The Discover Card Bank

(In Millions of Dollars)

	Deposits	Loans	Assets
December 31, 1986	$1,048.4	$987.9	$1,347.0
September 30, 1986	664.1	601.2	819.7
June 30, 1986	363.6	225.5	477.4
December 31, 1985	27.4	24.6	73.9

NEW YORK — For the second year in a row, a special-purpose bank has posted the largest nonmerger-related gain in deposits, according to the *American Banker*'s annual survey of the top 300 commercial banks.

The bank, Greenwood Trust Co. in New Castle, Del., is a subsidiary of Sears, Roebuck and Co., Chicago. It handles Sears' Discover credit card operations. Greenwood Trust's deposits rose 38-fold, to $1.05 billion at year-end 1986 from $27.4 million a year earlier. The bank's deposit growth is attributable to a Discover card option that allows customers to open a savings account at Greenwood Trust. The average balance on a Greenwood Trust savings account last year was $13,000. These accounts make up 99% of total deposits.

Greenwood Trust was acquired by Dean Witter Financial Services Group, another Sears subsidiary, in February 1985. The bank is a direct subsidiary of Dean Witter.

Chase Manhattan Bank (USA) NA, Wilmington, Del., a subsidiary of Chase Manhattan Corp., New York, had the largest deposit gain in 1985. The bank handles credit card operations for its parent. (The findings of the survey, including a list of the top 300 commercial banks, begin on page 41.)

A special-purpose bank, as defined for survey purposes, has a commercial

Foreign Banks Have a Vested Interest In the Demise of the Glass-Steagall Act

By JOHN J. DUFFY
London Bureau

LONDON — Strictly from a list of the participants, the continuing wrangle over the future of the Glass-Steagall Act would seem to be a purely domestic affair. With players like Citicorp, Morgan Guaranty Trust Co., and Bankers Trust New York Corp. pitted against adversaries like Goldman, Sachs & Co., Merrill Lynch & Co., and the Securities Industry Association, the debate often has the look of a somewhat overblown squabble among American financial services giants over how they plan to divide the American financial services pie.

Viewed from abroad, however, the Glass-Steagall debate encompasses a much wider group of participants. While major foreign banks are content to follow the debate from a respectful distance, they have more than a passing interest in the outcome. In many cases, foreign banks have already invested millions in global capital market operations built to span London, New York, and Tokyo time zones. In forecasting how soon those investments will pay off, the Glass-Steagall question has become an important variable.

That is because most foreign banks operating in the U.S. face the same re-

Glass-Steagall: Page 15 ➻

Fleet, Norstar Agree to Merge In Record Deal

By GORDON MATTHEWS

NEW YORK — In a deal carrying the biggest price tag yet among banking mergers, Fleet Financial Group Inc., Providence, R.I., and Norstar Bancorp., Albany, N.Y., have agreed to combine. The transaction is valued at $1.251 billion.

In terms of assets, Norstar would be the third largest U.S. bank acquired by another domestic bank, behind Crocker National Corp., San Francisco, which was acquired by Wells Fargo & Co., and Texas Commerce Bancshares, Houston, which is set to be acquired by Chemical New York Co.

The 1986 deposits may not be comparable to 1985 and 1981 deposits because some banks reported Federal regulatory deposits one year and deposits from public statements — based on general accounting principals — in the other years. In addition, some banks had sizable mergers or acquisitions. With respect to mergers, American Banker follows the bank of charter in determining the surviving bank. Equity capital is the sum of perpetual preferred stock, common stock, surplus, and undivided profits and capital reserves. In addition, for large banks, equity capital includes the cumulative foreign currency translation adjustments. (a)—New title for Bank of Virginia. Its new title becomes effective on 3/30/87. Its new title is shown above. N.A.— Not available.

Top 300 U.S. Commercial Banks in Deposits

In Order of Deposits December 31, 1986, Compared with December 31, 1985, and December 31, 1981
Compiled Annually Since 1921 by the American Banker in Cooperation with Polk's Bank Directory

Compiled by American Banker Copyright 1987

The 1986 deposits may not be comparable to 1985 and 1981 deposits because some banks reported Federal regulatory deposits one year and deposits from public statements — based on general accounting principals — in the other year. In addition, some banks had sizable mergers or acquisitions. With respect to mergers, American Banker follows the bank of charter in determining the surviving bank. **Equity capital** is the sum of perpetual preferred stock, common stock, surplus, and undivided profits and capital reserves. In addition, for large banks, equity capital includes the cumulative foreign currency translation adjustments. **(a)**—The new title for Union Trust Co. Its new title becomes effective on 3/30/87. **N.A.**— Not available.

Top 300 U.S. Commercial Banks in Deposits

In Order of Deposits December 31, 1986, Compared with December 31, 1985, and December 31, 1981
Compiled Annually Since 1921 by the American Banker in Cooperation with Polk's Bank Directory

Compiled by American Banker Copyright 1987

The 1986 deposits may not be comparable to 1985 and 1981 deposits because some banks reported Federal regulatory deposits one year and deposits from public statements — based on general accounting principals — in the other year. In addition, some banks had sizable mergers or acquisitions. With respect to mergers, American Banker follows the bank of charter in determining the surviving bank. Equity capital is the sum of perpetual preferred stock, common stock, surplus, and undivided profits and capital reserves. In addition, for large banks, equity capital includes the cumulative foreign currency translation adjustments.

Top 300 Commercial Banks in the United States

Listed Georgraphically by Order of Size within States

Deposit data for commercial banks compiled by American Banker in conjunction with R.L. Polk & Co. from bank statements and replies to questionnaire. Deposit data for savings banks are from National Council of Savings Institutions. (1)—Estimated by American Banker. (2)— The number of commercial banks was provided by the Federal Deposit Insurance Corporation and include all commercial banks, both insured and uninsured. (3)— Revised since publication on 3/18/86.

Equity Capital at Top 300 Commercial Banks in Deposits

Dec. 31, 1986 Compared With Dec. 31, 1985

	Equity Capital		%
	12/31/86	12/31/85	Change
Top 100 Banks	77,352,750,914	70,507,654,088	+ 9.7
Second 100 Banks	16,275,128,754	14,945,899,734	+ 8.9
Third 100 Banks	9,752,306,593	8,526,635,760	+14.4
Total for Top 300 Banks	103,380,186,261	93,980,189,582	+10.0

Equity capital is the sum of perpetual preferred stock, common stock, surplus, and undivided profits and capital reserves. In addition, for large banks, equity capital includes the cumulative foreign currency translation adjustments. The 1986 figures are for the top 300 banks in deposits on 12/31/86. The 1985 figures are for the top 300 banks in deposits on 12/31/85. **Source of Data:** Data were compiled by American Banker, working in conjunction with R.L. Polk & Co., Nashville, Tenn.

Breakdown of the Top 300 Commercial Banks in Assets

Dec. 31, 1986 Compared With Dec. 31, 1985

	Total Assets		%
	12/31/86	12/31/85	Change
Top 100 Banks	1,487,120,964,041	1,385,525,233,387	+ 7.3

Change: 1985-1986		-984	+ 7.9%

(a)—The number of commercial banks are provided by the Federal Deposit Insurance Corp., Washington, D.C., and includes: nationally chartered banks; FDIC-insured state member banks (of the Federal Reserve System); FDIC-insured state nonmember banks; and non-FDIC insured banks. The 12/31/85 deposit data are from R.L. Polk & Co.'s World Bank Directory, North American Edition. **(b)**—All operating savings and loan associations. Data are from the Federal Home Loan Bank Board, Washington, D.C. **(c)**— Data are from the FHLBB. Most of these "new" savings banks were savings and loan associations who changed their charters to become federal savings banks (FSBs). **(d)**— Data on the "traditional" savings bank industry provided by the National Council of Savings Institutions, Washington, D.C. Most of these savings banks are FDIC-insured. However, several of these institutions are also included in the FHLBB count of FSLIC-insured savings banks. **(e)**—All credit union data provided by Credit Union National Association, Madison, Wisconsin. **(E)**—Estimated by American Banker. **(p)**— Preliminary. **(r)**— Revised.

Survey Finds Special-Purpose Bank Posts Largest Deposit Gain

Continued from Page 1

bank charter, but makes few or no commercial loans. In most cases, the bank is used by its parent company to handle particular functions, such as credit card operations, and to take advantage of higher usury ceilings and tax benefits.

Over the first half of 1986, deposits grew more than 13-fold to $363.6 million on June 30. Over the second half of the year, deposits tripled to exceed the $1 billion mark on Dec. 31. Assets grew 18-fold over the year, from $73.9 million at yearend 1985 to $1.35 billion at the end of 1986.

Helene Duffy, of Duffy & Duffy Inc., New York, a bank consulting firm, attributes the growth to the bank's strong direct-mail campaign to solicit out-of-state deposits. Discover card holders received attractive premium rates for opening new savings accounts with Greenwood Trust. "Marketing people will tell you that the average response rate on a direct mailing is 0.2%, or two sales per 1,000 mailings," Ms. Duffy said. "A mailing to a prequalified group could up that to 0.3% or 0.4%. Sears is doing much better than that."

According to Margaret Bellock, president of Greenwood Trust, "The response to the direct-mail campaign exceeded projections." She attributed this to the "underlying strategy of adding value to the product. Specifically, consumers want to be rewarded for maintaining multiple relationships with a bank. Consumers are rewarded by receiving a higher rate on savings that is determined by the combined balances in a family, or group, of accounts."

Before joining Greenwood Trust, Ms. Bellock was a senior vice president for four years with W.N. Lane Interfinancial Group, Chicago, a four-bank group, and she worked for Continental Illinois National Bank & Trust Co., Chicago, for five years.

Sears, through Greenwood Trust, began issuing the Discover card in five test markets in the fall of 1985. Sears was soon overwhelmed by the amount of money deposited at Greenwood Trust in response to its first direct-mail campaign. Over the first five months of that first pilot program, Sears said many checks were for $10,000 or more.

In January 1986, the card was introduced nationally. About 22 million active Sears charge card holders began receiving preapproved applications for the Discover card. Mailings went out at a rate of 1.5 million per week to major markets, with the biggest market — New York — being left until the fall of 1986. Net loans — the bulk of which are credit card related — totaled $987.9 million at yearend.

Net income for 1986 was not yet available for the bank. However, over the first nine months of 1986, the bank reported a net loss of $69.9 million. In early 1986, Edward A. Brennan, chairman and chief executive officer of Sears, estimated that the cost of launching and promoting the Discover card would cost an after-tax $115 million in 1986.

According to the Office of the State Bank Commissioner of Delaware, Greenwood Trust Co. received its state charter in 1911. Also, the bank, which is insured by the FDIC, does not make commercial loans by choice. It is a "nonbank bank" to which interstate banking restrictions do not apply, and Sears, therefore, is not considered a bank holding company under the Bank Holding Company Act.

A nonbank bank is an institution that either accepts demand deposits or makes commercial loans but does not do both.

Deposits Up 127% at Boston Safe

Another special-purpose bank, Boston Safe Deposit and Trust Co., was the fastest growing among the top 300 banks over the past five years. Last year, it moved up 51 places in rank to No. 37 as deposits increased 127% to $6.8 billion on Dec. 31.

The bank's deposits increased more than 18-fold between yearend 1981 and yearend 1986, a sharp rise that coincided with the acquisition of the bank's parent, the Boston Company Inc., by Shearson/American Express in 1981. Deposits increased 166% to $377.6 million in 1981, moving Boston Safe up 547 places in rank to 416th. At yearend 1985, the bank ranked 88th, with $3 billion in deposits.

The bank began offering money market deposit accounts for Shearson/American Express clients in 1983. James N. von Germeten, the bank's chief executive officer, said in an interview in 1983 that along with the increase in deposit-taking would be an expansion of high-net-worth personal loans, including mortgage loans, in the New England area.

Over the 18-month period that ended on Dec. 31, 1985, total loans soared 449%, from $269 million on June 30, 1984, to $1.48 billion. At yearend 1985, loans secured by real estate totaled $1.18 billion and consumer loans totaled $288.7 million.

Last year, total loans more than doubled to $3.2 billion on Dec. 31, 1986. Loans secured by real estate totaled $2.4 billion, up 103% from the year before, and consumer loans totaled $669.3 million, up 132% from a year earlier.

At yearend 1986, money market deposits totaled $2.2 billion, up 83% from $1.2 billion a year earlier. Money market deposit accounts accounted for 32% of the bank's total deposits at yearend 1986.

Boston Safe was highly profitable again last year, earning $117.8 million, up 123% from $52.8 million in net income in 1985, when the bank ranked as the 59th most profitable banking company in 1985. Its return on average assets, as calculated by the *American Banker*, was 2.06% in 1986, up 22 basis points from 1.84% in 1985.

Other Survey Findings

The *American Banker*, working in conjunction with R.L. Polk & Co., a Nashville-based publisher of banking directories, surveyed the nation's top 7,000 banks in deposits to rank the top 300 banks today. Listed below are some of the more important findings of this survey.

- Texas-based banks, which have experienced sizable problems with their energy-related and real estate loan portfolios, posted the five largest deposit losses among the top 300 banks.

The largest loss — 50% — was suffered by InterFirst Bank Dallas NA. The bank, which ranked 84th in deposits last year, had deposits of $3.5 billion on Dec. 31, 1986, down from $7.0 billion on Dec. 31, 1985.

The deposits of 92d-ranked First City National Bank, Houston, fell 40%, to $3.3 billion; 209th-ranked RepublicBank Houston NA had a 24% drop; 50th-ranked Texas Commerce Bank NA, Houston, had a 20% decline; and 289th-ranked InterFirst Bank Fort Worth NA had a 19% drop in deposits.

- Total deposits of the top 300 banks were up 8.3%, to $1.39 trillion. In 1985, the top 300 banks posted an 8.6% gain in deposits.

- The top 300 banks held 60.5% of all commercial bank deposits last year, down from 60.7% a year earlier.

- The share of the top 300 deposits held by 25 largest banks fell to 49.4% last year, from 51% in 1985, 52.6% in 1984, and down from the record share of 61.3% in 1980. The 49.4% share is the smallest since 1960, when the top 25 held 50.3% of the total deposits of the top 300 banks. The growth of regional banks, coupled with the problems experienced with several of the large banks over the past four years, are the main reasons for the decline in this percentage.

- Total equity capital of the top 300 banks in deposits was up 10% last year to $103.4 billion. In 1985, equity capital rose 12.3%. The yearend equity-to-assets ratio for the top 300 banks in deposits was 5.42%, up nine basis points from 5.33% at yearend 1985, and up 21 basis points from 5.21% at yearend 1984.

- The total assets of the top 300 banks were up 8.3%, to $1.91 trillion. A year earlier, assets rose 9.78%.

Mitsui to Buy 50% of Security Pacific Unit

By JED HOROWITZ

NEW YORK — Security Pacific Corp. said it will sell 50% of its Japanese-based consumer lending company to Mitsui & Co., the Japanese trading company and owner of Mitsui Bank Ltd.

The purchase price is still being negotiated, said Security Pacific vice chairman William F. Ford, who noted that negotiations began about 45 days ago. The company, Japan Security Pacific Finance Co., has $200 million to $300 million of receivables, he said.

A substantial part of its business, Mr. Ford noted, is financing golf club memberships for Japanese borrowers. Memberships run into the thousands of dollars, he said.

The bank opened the consumer lending company in Japan in 1978, but believes that Mitsui will help expand the bank's customer base in "multiples substantially greater" than what it has today. "We bring the expertise in this particular environment in consumer and commercial-type lending, and they bring the customer base," said Mr. Ford. Security Pacific also will supply data processing support for the joint venture, the bank said.

The finance company in Japan has five branches and will expand with the Mitsui alliance, Mr. Ford said.

Security Pacific runs a sister finance company in Hong Kong, which Mr. Ford called the territory's premier consumer lending organization. The bank also has leasing company offices in Japan, Singapore, and Hong Kong.

Mr. Ford said that in the future the Mitsui joint venture company can be used to house other activities. The Japanese Ministry of Finance recently said that several U.S. banks can open securities subsidiaries in Japan if they limit their ownership to 50%. Some analysts speculate that the regulator may use the 50% formula to permit expansion of foreigners into other industries.

Security Pacific has a presence in securities trading in Tokyo through its purchase of a British broker, Hoare Govett Ltd.

Mr. Ford noted that the two parties have signed a letter of intent to form the joint venture. Applications still must be made to regulators in the United States and Japan. ■

Fleet, Norstar Agree to Merge

Continued from Page 1

But it exceeds those transactions in price — as well as the estimated $1.150 billion that Security Pacific Corp. agreed last month to pay for Rainier Bancorp, Seattle — to rank first among the four banking mergers with billion-dollar stickers attached to them.

The companies said the merger will result in a new company, to be called Fleet-Norstar Financial Group Inc. The resulting firm would be among the largest nonmoney center banking organizations in the Northeast, with assets of about $23 billion. Fleet Financial had assets at yearend of $11.7 billion while Norstar had assets of $11.1 billion.

Under the terms of the all-stock agreement, owners of Norstar will be paid 1.2 shares of Fleet Financial common stock for each share of Norstar, based on the number of Fleet shares outstanding after a 2-for-1 stock split. That split is payable on April 1 to shareholders of record on March 15.

The deal may be at least partly rooted in the long-term friendship of Peter D. Kiernan, chairman and president of Norstar, and J. Terrance Murray, chairman and chief executive officer of Fleet Financial.

Mr. Kiernan, during an interview last autumn, noted that he planned to join Mr. Murray at Boston's Fenway Park to watch the World Series. ■

Chances Slim to Overturn Fed's Westminster Bank Unit Ruling, Says Lawyer

By GLEN CRANEY

Washington Bureau

WASHINGTON — A lawyer for a securities trade group expressed doubts about the chance of setting aside a Federal Reserve Board decision that a bank holding company's unit may offer both investment advice and securities brokerage services to institutional clients.

"Realistically, we have an obstacle to overcome," William Fitzpatrick, general counsel for the Securities Industry Association, said this week.

The Wall Street trade organization is appealing the approval of an application by the National Westminster Bank, London, and its U.S. subsidiary, NatWest Holdings Inc. Oral arguments were given before a federal appeals court here on Friday.

Mr. Fitzpatrick noted that the panel of the U.S. Court of Appeals for the District of Columbia includes Judge Robert H. Bork, whom the attorney described as a "free marketer from way back."

Judge Bork joined in a Dec. 24, 1986, ruling, now on appeal to the U.S. Supreme Court, rejecting a similar Glass-Steagall attack by the Securities Industry Association against the Fed's decision to permit Bankers Trust Co. to sell commercial paper.

Lawyers in the case said they could not predict when a decision might be handed down. ■

Fleet, Citizens Plan 'Switch' For System of Shared ATMs

BOSTON — Citizens Bank and Fleet National Bank, both based in Providence, R.I., have announced that they are setting up an automated teller machine "switch" to share ATMs.

A switch is a specialized computer that lets customers of one bank use the teller machines of another.

Fleet and Citizens, two of the state's largest financial institutions, expect the switch to be operating in late summer.

Big Mergers Take Toll on Bank Shareholders

Earnings per Share Lag Net Income, Data Show

By BART FRAUST

NEW YORK — Stockholders paid the price for their banks' aggressive acquisition strategies last year.

For 15 large bank hoiding companies that completed a major bank acquisition in 1986, growth in earnings per share sharply trailed growth in total net income. In contrast, at 15 large banking companies that did not complete a major acquisition, growth in earnings per share only slightly trailed growth in total net income.

"This reflects the impact of dilution on earnings per share," said David Cates, a New York banking analyst, who has long warned that the aggressive and expensive acquisition strategies of banks erode the value of bank stocks.

In addition, growth in profitability, as measured by growth in return on assets and return on equity, was four times greater in the nonbuyer group than in the buyer group.

Reducing overhead is a major driving force behind mergers and acquisitions, but the 1986 results show that this is not a quick process. Banks in the nonbuyer group reduced overhead by an average of six times the rate achieved by banks in the buyer group.

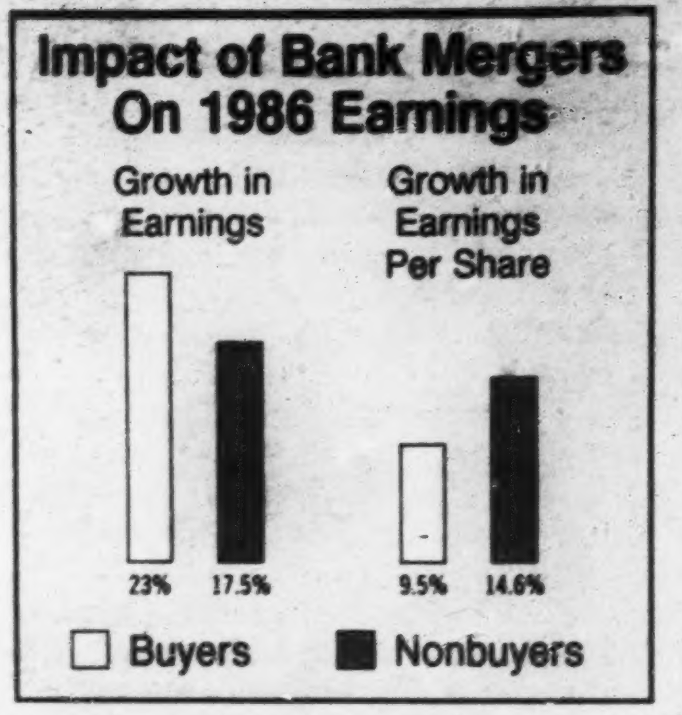
Capital, as measured by the equity-to-assets ratio, grew three times the rate among banks in the nonbuyer group as banks in the buyer group.

Shareholders of aggressive buyers benefited in terms of dividends. While dividends per share expanded more sharply at the aggressive buyers than at the nonbuyers, buyers are using a greater percentage of their net incomes to support dividend payments to common stockholders than the nonbuyers. Hence, nonbuyers have a greater ability to generate capital internally.

One indicator that favored shareholders of big buyers was market price growth — and to some this is the most important factor. In 1986, the stock prices of the 15 buyer banks grew an average of 10.2%, while the nonbuyer group's prices grew an average of 8.3%.

Data for the comparisons in this arti-

Big Mergers: Page 47 ➻



Impact of Bank Mergers On 1986 Earnings

Deposit Gains Through Mergers Up 156%

Account for 40% of Deposit Growth at Top 300 in '86

By L. MICHAEL CACACE

NEW YORK — Deposits acquired through acquisitions and mergers accounted for 40% of the deposit growth of the top 300 banks in the nation last year, compared to only 17% in 1985.

Last year, the total deposits of the top 300 banks rose $106.3 billion to reach $1.39 trillion on Dec. 31. And deposits acquired through mergers and acquisitions at these banks totaled $42.9 billion, or 40.4% of the total deposit gain. In 1985, deposits acquired through mergers at the top 300 banks totaled $16.5 billion, or 17% of the $97.4 billion deposit gain posted by those banks.

AN American Banker
SPECIAL REPORT

These are some of the findings of the *American Banker's* fourth annual survey of mergers and acquisitions among the top 300 banks in the nation, published today. Partial acquisitions, such as branch purchases, are included in the listing. In addition, the survey covers holding company acquisitions completed last year where the lead banks were not affected by the mergers.

The acquisition of deposits through mergers rose by 156% at the top 300 commercial banks last year, the largest such gain since the *American Banker* began tracking these mergers in 1980. The previous high was 64% in 1984. In 1985, the acquisition of deposits acquired through mergers fell 25%.

Among the top 300 commercial banks in 1986, 65 acquired a total of 123 banks, with combined deposits of $42.9 billion. In 1985, 44 banks in the top 300 acquired 137 banks, with

Deposit Gains Through Mergers Up 156% at Top 300 Banks

Continued from Page 1

$16.8 billion in deposits.

There were five major reasons for this sharp gain in deposits:

- First, two British banks sold off their California-based commercial bank subsidiaries accounting for over 41% of all deposits acquired through merger by the top 300 banks last year.
- In Pennsylvania and Ohio, three banks had major intrastate mergers and consolidations, accounting for 13% of the total.
- The acquisition of thrift institutions by banks in the top 300 accounted for 8.5%.
- Changes in Missouri law with respect to statewide expansion added 7% to the deposits acquired through mergers.
- And the consolidation of interstate holdings by two of the nation's super-regional firms contributed 6% to the total.

The largest merger completed last year involved two San Francisco giants. In February 1986, Wells Fargo & Co. acquired Crocker National Corp. from Midland Bank PLC, London. In May, subsidiaries of these two bank holding companies — the $19.7 billion-deposit Wells Fargo Bank NA, the nation's 10th largest bank, and the $15.1 billion-deposit Crocker National Bank, the nation's 14th largest bank — were merged under the Crocker charter and the Wells name. This merger alone accounted for over 35% of all deposits acquired through merger by the top 300 banks last year. Wells Fargo Bank, with $33.3 billion in deposits on Dec. 31, 1986, ranked ninth among the top 300 banks.

Mergers at the Top 300 Banks
Tables on Pages 26, 28, 30

In addition, last September another British bank, Lloyds Bank PLC, London, sold its Los Angeles-based commercial bank subsidiary, the $2.5 billion-deposit Lloyds Bank California, to Sanwa Bank Ltd., Osaka, Japan. Sanwa then merged the acquired bank into its San Francisco-based bank, the $1.3 billion-deposit Golden State Sanwa Bank, San Francisco. After the merger, Golden State Sanwa changed its name to Sanwa Bank California. This merger helped push Sanwa Bank California up 200 places to rank 76th in deposits, with $3.9 billion in deposits at yearend 1986.

Combined, the mergers of the two British banks' subsidiaries accounted for $17.7 billion, or 41.2%, of the $42.9 billion acquired through mergers by the top 300 banks last year.

In Ohio and Pennsylvania, large intrastate mergers helped three banks in these states — Society National Bank, Cleveland, Meridian Bank, Reading, Pa., and Fidelity Bank, Malvern, Pa. — acquire more than $5.6 billion in deposits, or 13.1% of the deposits acquired through merger by the top 300 last year. In the cases of Society National Bank and Meridian Bank, these mergers involved the consolidation of banks acquired in previous years by their parent holding companies into these two banks.

In October 1985, Society Corp., Cleveland, acquired the $3.1 billion-asset Centran Corp., also of Cleveland. In February 1986, two of the Centran banks — the $1.5 billion-deposit Central National Bank, Cleveland, and the $305 million-deposit Centran Bank of Akron were merged into Society Corp.'s lead bank, Society National Bank.

Society National Bank advanced 53 places to rank 75th in deposits last year, with $3.97 billion in deposits on Dec. 31, up from $2.1 billion a year earlier.

In Pennsylvania, Meridian Bancorp, Reading, merged two of its bank affiliates — the $1 billion-deposit First National Bank of Allentown and the $942 million-deposit Central Penn National Bank, Bala-Cynwyd — into its lead bank, American Bank & Trust Company of Pennsylvania, Reading, in April. American Bank then changed its name to Meridian Bank. The two banks were acquired in earlier intrastate deals. In 1984, Meridian Bancorp. acquired First National Bancorporation of Allentown Inc., and in 1983 it acquired Central Penn National Corp. Meridian Bank was the nation's 53d largest bank at yearend 1986, with $5.4 billion in deposits, up from $2.9 billion on Dec. 31, 1985, when it ranked 90th.

Also, in April Fidelcor Inc., Philadelphia, the holding company for the $7.2 billion-deposit Fidelity Bank, Malvern, acquired IVB Financial Corp. and its lead bank, the $1.9 billion-deposit Industrial Valley Bank & Trust Co. In September, Industrial Valley Bank was merged into Fidelity Bank.

Eight Banks Buy Thrifts

Last year, eight of the top 300 banks acquired thrift institutions, with combined total deposits of $3.6 billion, or 8.5%, of the total deposits acquired through merger by the top 300.

The three largest mergers of this type were in Florida, New York, and Ohio, respectively. In Florida, Barnett Bank of Southwest Florida, Sarasota, acquired the $1.4 billion-deposit United First Federal Savings & Loan Association, Sarasota, on Dec. 22. In New York, Marine Midland Banks Inc., Buffalo, in August acquired the $816 million-deposit Westchester Federal Savings & Loan Association, New Rochelle. Prior to the merger, the thrift was converted to a commercial bank called Westchester Bank NA. In Ohio, AmeriTrust Co. NA, Cleveland, acquired the $809 million-deposit Eagle Savings Association, Cincinnati.

In Missouri, the law permits a bank to acquire banks in contiguous counties. This presented a problem to the St. Louis-based banks, because they are surrounded by only one county, St. Louis County. According to William J. Carner, president of Carner & Associates, Springfield, Mo., publisher of *The Bancpen Reports,* to overcome this problem, "the large St. Louis banks merged with their much smaller affiliate banks in St. Louis County under the charters of the smaller banks. This will allow these banks to acquire banks in the counties contiguous to St. Louis County in the future."

Last year, six Missouri banks in the top 300 acquired 22 other banks, with combined deposits of $2.96 billion. Three of these banks — Mark Twain Bank NA, Ladue, Mercantile Bank NA, St. Louis, and Centerre Bank NA, St. Louis — merged under the charter of smaller, affiliate banks in St. Louis County and accounted for $1.67 billion, or 56%, of the total deposits acquired through merger by the six Missouri banks.

The two superregional banking firms based in Charlotte, N.C. — the $27.5 billion-asset NCNB Corp. and the $26.8 billion-asset First Union Corp. — consolidated their Florida holdings into their major bank subsidiaries in Florida. And these two mergers accounted for $2.6 billion in acquired deposits, or 6.1%, of all deposits acquired through mergers.

On Dec. 30, 1985, NCNB Corp. acquired Pan American Banks Inc., Miami. Over the first seven months of 1986, four Pan American banks, with combined deposits of $1.34 billion, were merged into the $6.7 billion-deposit NCNB National Bank of Florida, Tampa.

In May 1986, First Union completed its acquisition of the First Bankers Corporation of Florida. In June, First Union merged nine of the banks of this holding company, with combined deposits of $1.28 billion, into its $5.3 billion-deposit First Union National Bank of Florida, Jacksonville. First Union National Bank was formerly known as Atlantic National Bank of Florida. ■

Dear Reader, How Are We Doing?

The *American Banker* wants to make sure our annual survey on mergers and acquisitions at the Top 300 meets your information needs. So would you spend a moment to give us some feedback? Please clip out this questionnaire and return to: William Zimmerman, Editor, American Banker, One State Street Plaza, New York, N.Y. 10004 (212) 943-5712.

Great Western Insurance Unit To Be Sold for $280 Million

West Coast Bureau

LOS ANGELES — Great Western Financial Corp. announced a definitive agreement to sell the John Alden Life Insurance Co. and affiliated operations to managers of the insurance unit for $280 million.

The transaction will be financed by General Electric Credit Corp., which delivered a commitment letter to the management group, headed by John Alden president Glendon E. Johnson.

Great Western, based in Beverly Hills, Calif., said it expects to realize a pretax gain of $65 million from the sale and an after-tax gain of about $15 million.

Great Western last month disclosed it was discussing the sale of John Alden to Celtic Group Inc., a Chicago-based company with insurance operations. Great Western gave no reasons for the termination of those discussions.

"While this fine group of companies is operating well and profitably, its sale will enable Great Western to redeploy the proceeds into the expansion of its core businesses," said James F. Montgomery, Great Western's chairman and chief executive officer, referring to retail banking, mortgage lending, mortgage banking, and consumer finance.

Great Western, parent of Great Western Bank, a federal savings bank, recently disclosed an aggressive expansion strategy. In a recent interview with the *American Banker,* Mr. Montgomery said the company is preparing to expand into as many as a dozen new states this year, either with full retail banking operations, real estate loan offices, or both. It also plans to expand its consumer finance operations through acquisitions, with a goal of doubling consumer loan profits, which last year contributed more than $17.6 million to Great Western's net profits of $301 million.

Great Western acquired John Alden in 1983 when it purchased the Miami-based Aristar Inc. for $165 million.

"When we acquired Aristar in 1983, our primary purpose was to acquire the consumer finance company, and the insurance company was just part of the program," Mr. Montgomery said. "The companies have done very, very well, but the consumer finance company has done better than the insurance company."

In 1986, for example, net profits from life insurance operations totaled 0.79% of average assets, compared with 2.28% for consumer finance operations. John Alden reported after-tax profits of $12.7 million in 1986.

Great Western, with more than $27 billion in assets, said the John Alden transaction is subject to regulatory approvals and certain other conditions. ■

Clearing House Group Sets Payments Institute

NEW YORK — The National Automated Clearing House Association has scheduled its Payments Institute for June 21-26 at the University of Colorado, Boulder.

The academic program in payment systems structure, marketing, economics, and cash management services is taught by a faculty that includes Donald G. Long, industry consultant, IBM Corp.; Carl Gambs, vice president, Federal Reserve Bank of Kansas City; Dean Bitner, director of EFT development, Sears, Roebuck and Co.; Allen DeCotiis, president, Payment Systems Inc.; and John F. Lee, executive vice president, New York Clearing House Association.

For certification, students must complete elective and nonelective courses, a study project, and the week-long residency at Boulder. For information contact the National Automated Clearing House Association, 1901 L Street N.W., Washington, D.C. 20036, 202-659-4343. ■

Strategic Dates

June 18, 1987

PHASE TWO: Today, the second phase of the Federal Reserve Board's plan to reduce banks' intraday overdraft limits goes into effect. Under the March 1986 plan, banks must reduce their overdraft limits by 25%. The Fed is concerned about the operational and credit risks associated with the computerized networks used by banks to transfer hundreds of billions of dollars every day. An overdraft of $1 billion or more by a single bank is not unusual.

Acquiring banks are listed in geographical order, with their respective deposit ranks shown in the left-hand column. The "acquiring bank" is the bank under whose charter the merger occurs. However, when the affiliated banks of a holding company merge under the charter of the smaller bank, American Banker counts the deposits of the smaller of the two banks merged. This avoids overstating the impact of internal mergers. The overstatement would have been significant in Missouri, where holding companies merged their lead banks under the charter of a smaller affiliate for legal reasons only. An asterisk (*) is placed beside "the deposits of merged banks" to indicate that the deposits of the smaller bank are shown. (a)—Type of Changes: (A)—The purchase of certain assets and the assumption of certain liabilities of the bank listed. (B)—The acquisition of a branch or branches from the bank listed. The number of branches acquired are shown in parenthesis. (#)—Acquired several branches. (L)— Change of location of head office. (M)— Merged the institution listed. (M[1])— Acquired a portion of the institution listed. (N)— Name change. N.A.— Not available. ([2])— Changed location from St. Louis County to St. Louis on 6/30/86. (★)— Formerly Westchester Federal S&L Assn. (†)— Deposits are as of 6/30/86.

Data are compiled by American Banker from data received from R.L. Polk & Co., Nashville, Tenn.

Summary of Survey Findings

A Geographical Breakdown of Merger Activity Among the Top 300 Banks

(Dollar Amounts in Millions)

State	Number of Acquiring Banks		Number of Banks Acquired		Total Deposits in Acquired Banks (a)

Totals	**65**	**44**	**123**	**137**	**$42,902**	**$16,758**

American Banker follows the bank of charter when banks merge. The surviving bank is the bank whose charter has survived the merger. (a)— These totals represent the "deposits acquired through merger" in the respective states. In calculating the "deposits acquired through merger", when the affiliated banks of a holding company merge under the charter of the smaller bank, American Banker counts the deposits of the smaller of the two institutions merged. This avoids overstating the impact of internal mergers. The overstatement would have been significant in Missouri, where holding companies merged their lead banks under the charter of a smaller affiliate for legal reasons only. Please note: the 1986 data column has total deposits as of 12/31/85. and the 1985 data column has total deposits as of 12/31/84.

Top 10 Banks in Acquired Deposits

Combined Deposits Acquired Through Merger in 1986

(Dollar Amounts in Millions)

Big Mergers Take Toll on Shareholders of Acquiring Banks

➳ Continued from Page 1.

cle were derived from financial ratios contained in the "Keefe Bankbook," a statistical survey of the largest banks that is published by Keefe, Bruyette & Woods Inc., a New York investment banking and research firm, and other sources.

One year's results are insufficient to evaluate the success or failure of banks' current strategic emphasis on growth through acquisition. It is argued that shareholder value lost through dilution can be recovered and augmented in future years through efficiencies, cross-selling of products, expanded markets, and other opportunities presented by mergers and acquisitions.

It is also argued that an aggressive acquisition program is a key element to survival. However, First Interstate Bancorp's recent unsuccessful attempt to buy BankAmerica Corp. shows that size alone affords insufficient protection against takeover.

'Wishful Thinking'

"If you can dilute earnings per share and still show an attractive earnings-per-share growth rate, you'll maintain a high standard in the bank stock market," Mr. Cates said. "But many CEOs at big banks think that if they just get bigger and more diversified, they will get higher price-earnings ratios.

"This is really debatable — wishful thinking from the executive suite," he said.

Total earnings usually increase sharply when one large bank acquires another large bank. Dilution occurs when new shares issued to pay for an acquisition slow growth in earnings per share. A buyer's earnings per share may grow but not as fast as they would have without the issuance of the new shares.

Earnings-per-share dilution can also take place in a cash deal, that is, when a company buys another company with cash rather than stock. The cost of borrowing to finance the acquisition can also place a drag on earnings per share. Also, often a bank will pay for an acquisition in cash but still issue new shares in order to raise the cash or increase capital.

In both cases, the value of the shares is reduced in that each share held represents a lesser chunk of a company's earnings.

Total net income at 15 big buyers last year increased an average of 23%, while per-share earnings rose an average of 9.5%. At the nonbuyers, total earnings advanced an average of 17.5%, while per-share earnings rose an average of 14.7%.

Thus, there is a 13.5 percentage-point difference between total earnings and earnings per share at the buyer group on average. For the nonbuyer group, there is just a 2.8 percentage-point spread.

Another area in which the buyer group lagged behind the nonbuyer group was in growth in profitability, as measured by return on assets and return on equity. Return on assets is one measure of how efficiently a company is deploying its assets. Return on equity is a crucial indicator for shareholders because it shows how well a company is making use of their money.

Return on assets grew an average of 2.2% in the nonbuyer group, while advancing an average of 8.5% in the nonbuyer group. Return on equity grew 1.1% in the buyer group, compared with 4.7% in the nonbuyer group.

Nonbuyers also did a better job than buyers in reducing overhead last year. Among banks in the nonbuyer group, the overhead ratio — defined by Keefe Bruyette as noninterest expense minus noninterest income divided by fully taxable net interest income — declined an average of 18.3%. The buyer group showed a decline of 3.6%.

However, at least part of the difference can be attributed to one-time expenses associated with mergers, for example, severance pay for some employees of the acquired company or fees to investment bankers. "Mergers are an expense nightmare," Mr. Cates said.

Capital grew faster at the nonbuyer group than the buyer group. Shareholders equity as a percentage of assets grew an average of 1.2% for the buyers and 3.6% for the nonbuyers. The nonbuyers also had better ability to produce capital internally. The capital generation rate of the buyers — net income minus dividends divided by average total equity — rose 13.3% on average at the nonbuyers, while declining an average 1.8% at the buyers.

The effect of mergers on capital is partially explained by looking at the companies' dividends. The buyer group is paying out more of its net income to cover dividends than the nonbuyer group, so there is less money available for capital retention. Dividends per share grew an average of 12.5% for the buyers, while expanding an average of 7.8% for the nonbuyers. However, dividends as a percentage of net income grew 1.4% at the buyers, while dropping 10.6% at the nonbuyers.

Better Asset Quality Among Buyers

An interesting finding is that the buyer group had better asset quality than the nonbuyer group. Net chargeoffs as a percentage of average loans increased an average of 20.4% among the buyers and 35.9% among the nonbuyers. Nonperforming assets as a percentage of average loans declined 5.7% at the buyers and 1.9% at the nonbuyers.

This result is partially explained by the fact that the buyer group is heavily composed of regional banks and the nonbuyer group is tilted toward the money centers, which were precluded from making major interstate acquisitions last year. Regional banks historically have had better asset quality than their money center rivals.

Mr. Cates said that he would have expected asset quality to be a neutral factor and that the result also may be attributable to window-dressing attempts by some banks in the buyer group. "There is a lot of discretion in recognizing loan losses," he said. "There may be some foot-dragging."

Banks included in the buyer group were: Security Pacific Corp., Los Angeles; Wells Fargo & Co., San Francisco; Fleet Financial Group Inc., Providence, R.I.; First Union Corp., Charlotte, N.C.; NBD Bancorp, Detroit; Banc One Corp., Columbus, Ohio; Sovran Financial Corp., Norfolk, Va.; First of America Bank Corp., Kalamazoo, Mich.; United Jersey Banks, Princeton, N.J.; CoreStates Financial Corp., Philadelphia; Fidelcor, Philadelphia; Midlantic Banks Inc., Edison, N.J.; Citizens and Southern Georgia Corp., Atlanta; SunTrust Banks Inc., Atlanta; and Dominion Bankshares Corp., Roanoke, Va.

Those included in the nonbuyer group were: First Wachovia Corp., Winston-Salem, N.C.; First Chicago Corp.; Bank of Boston Corp.; First Bank System Inc., Minneapolis; Bankers Trust New York Corp.; Chase Manhattan Corp., New York; Chemical New York Corp. (Chemical has not yet completed its acquisition of Texas Commerce Bancshares); Citicorp, New York; Manufacturers Hanover Corp., New York; J.P. Morgan & Co., New York; NCNB Corp., Charlotte, N.C.; Valley National Corp., Phoenix; Harris Bankcorp, Chicago; Norwest Corp., Minneapolis; and First Fidelity Bancorp, Newark, N.J. ■

Not All Acquisitions Mean Dilution of Earnings

NEW YORK — Not all acquisitions result in dilution in earnings per share. For example, the recently announced merger of the Fleet Financial Group Inc., Providence, R.I., and Norstar Bancorp Inc., Albany, N.Y., if completed last year would have diluted Fleet's earnings per share by less than 1%. Here's how to figure out dilution:

(1) Under terms of the deal, each of Norstar's 35.1 million common shares will be exchanged for 0.6 (pre-stock split) Fleet share. Fleet will issue 21.1 million shares in the transaction. When these shares are added to Fleet's currently outstanding shares, a total of 47.1 million shares will be outstanding.

(2) Fleet and Norstar last year earned a combined total of $241.5 million. When $7.8 million in annual preferred dividends are subtracted, a total of $233.7 million is available to common stockholders.

(3) When the combined net income is divided by the post-merger shares outstanding, per-share net income equals $4.96.

(4) Fleet earned $5 a share in 1986, so the pro-forma dilution is 4 cents a share, or less than 1%.

Citicorp Finds Profits in Consumer Banking

➳ Continued from Page 3

yearend.

The mortgage business is "at the heart of Citicorp's consumer strategy," according to Robert D. Horner, who heads that business for Citicorp.

Citicorp Savings subsidiaries in Florida, Illinois, and California probably will add $100 million to the Citicorp bottom line within the next five to seven years, Mr. Braddock said.

The Chicago-based Citicorp Savings of Illinois became profitable in 1986, and the thrift institutions in California and Florida are expected to become profitable in 1987, Mr. Braddock said.

Currently, he said, the corporation is carrying $4 billion in assets as a "drag on profit-center earnings and return on equity" because of $100 million in writeoffs in the mobile-home business last year. In the future, he said, the major drags on earnings will come from new acquisitions, which take time to turn around.

In terms of the bank card business, where executives said new credit scoring techniques give greater control, "we project that the overall loss rate as a percentage of net receivables will decline marginally," Mr. Braddock said.

The bank card business and mortgage business are expected to be the core of Citicorp expansion through multiple consumer relationships in the future, according to the executives.

However, Mr. Braddock explained privately, the company that 10 years ago thought it was possible to get people to conduct their banking business totally by telephone, mail, and automated teller machines now realizes that some physical presence in the form of branches is necessary for consumer comfort.

This can be interpreted to mean that Citicorp will increase its physical presence wherever it is, and in new areas as opportunities open.

James W. Johnston, who heads Citicorp's consumer business in the Northeast, said that the New York banking division, Citicorp's strongest branch network, increased its share of New York deposits from 4.6% in 1977 to 13% in 1968, moving from No. 3 in the market to No. 1. Further, he said, the company's share of the credit and mortgage markets in New York boomed in that same time period from slightly more than 1% to slightly less than 21%.

The bank's combination checking, money market, and credit account — called CitiOne — is largely responsible, with 12,000 new households a month buying it.

Citicorp said at the analysts' meeting that it will install a new generation of automatic teller machines, increasing the number of its ATMs in the New York metropolitan area by 53%, from 622 to 950.

The new machines will use touch-screen technology and color graphics, Mr. Johnston said. They also will provide increased language capability in English, Spanish, and Chinese at all 275 Citicard banking center locations.

Mr. Braddock called the American Express Co.'s new Optima card a " 'nose under the tent' strategy." He said, "We are not so naive that we see American Express' introduction of Optima as a cross-sell device to their own customer base being their strategy for the long term. We expect them to compete overtime for our bank card customers."

Citicorp, the executive said, will introduce a national advertising campaign later in the year. The company is looking for opportunities to acquire healthy financial institutions in other states, he added, but it also believes that there are alternatives to paying what Mr. Braddock called "pricey" premiums that occur when markets open up to out-of-state acquisitions for the first time. ■

Banking Bill . . .

➳ Continued from Page 43

tant to House Speaker Jim Wright, D-Texas, and to a number of other representatives, especially those from the nation's energy region. One committee Democrat said after the caucus that the committee's bill will inevitably include some forbearance language.

A major issue looming as the House Banking Committee prepares for a vote next week, is whether it will accept the two-year, $5 billion proposal supported by the Mr. Wright and committee chairman Fernand J. St Germain, or the Reagan administration's proposal for a five-year, $15 billion recapitalization.

Rep. Thomas R. Carper, D-Del., is pushing the administration proposal, though with provisions "to keep the Federal Home Loan Bank Board on a short leash," as a source close to Mr. Carper said. One method of doing that would be to authorize a five-year plan that Congress could suspend periodically through a joint resolution.

If the House passes an FSLIC measure, it will have to be reconciled in conference with the six titles in the Senate bill. A number of House committee members have already indicated they are not willing to consider the Senate language.

The Senate committee report also included a letter from the Congressional Budget Office projecting that the bill, if passed, would save from $200 million to $400 million annually over the next three years in reduced insurance costs for banks, thrifts, and credit unions. ■

Senate Passes Comprehensive Bank Bill

Includes FSLIC Rescue and Moratorium on New Powers

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — The Senate on Friday passed legislation authorizing a $7.5 billion recapitalization of the Federal Savings and Loan Insurance Corp., a ban on new nonbank banks, and a moratorium on new bank powers. The vote was 79 to 11.

The bill would place a one-year moratorium on new securities, insurance, and real estate powers for federally regulated banks. But it would permit states to give new insurance powers to state-chartered banks.

The bill also authorizes regulators to arrange interstate mergers for failed or failing banks. And it limits holds on deposited checks, while requiring banks to cash all government checks without charge for customers and noncustomers alike.

Nonbank banks will be permitted to acquire failing thrift institutions if state laws permit.

Related banking legislation is moving through the House, and votes are scheduled this week by the House Banking Committee. Any banking bill passed by the House must be reconciled with the Senate bill in conference committee.

Once passed by Congress, the bill faces review by President Reagan, whose advisers earlier last week threatened a veto of a bill with too many controversial provisions. The administration had sought a "clean" FSLIC bill, which would have addressed neither the nonbank-bank issue nor any freeze on new bank powers.

The American Bankers Association, which had pushed hard for the elimination of the moratorium title, was largely unsuccessful in that bid. Although the moratorium was softened, it was retained essentially intact.

A section of the bill that would have exempted federal bank, thrift, and credit union regulators from the Gramm-Rudman budget-reduction act was removed from the bill after Sen.

California Banks, Thrifts Rank High in IRA; Keogh Deposits

By KENNETH J. HICKS

NEW YORK — California institutions continued their strong performance in gathering individual retirement and Keogh account deposits last year, according to the *American Banker's* fourth annual survey of the top deposit-taking institutions in the United States.

AN American Banker SPECIAL REPORT

Six of the 10 commercial banks and thrifts that did the most IRA and Keogh business in 1986 are headquartered in California, with Bank of America, San Francisco, holding on to its No. 1 ranking, the survey found.

These six institutions accounted for 38% of IRA and Keogh deposits held by the top 25 institutions in IRA accounts. They also accounted for almost 5% of all IRA deposits at commercial banks, thrifts, and money market mutual funds.

NY Agents Seek Insurance Limit At Savings Banks

By LYNN BRENNER

NEW YORK — New York's life insurance agents are hoping to change a law that a year ago inadvertently allowed thrifts to sell an unlimited amount of Savings Bank Life Insurance (SBLI). As a result of the law, they now offer up to $250,000 of insurance per consumer. The agents want to reestablish a policy limit of $50,000.

The war between thrifts and life insurance agents over how much coverage savings banks should be allowed to sell is decades old. But the upcoming battle features an interesting role reversal: Historically, the thrifts have lobbied for legislation and the agents have had the politically easier task of arguing in favor of the status quo. This year, it is the other way around.

Rank among all U.S. deposit-taking institutions. The bulk of the data are from an American Banker questionnaires. Banks are asked to report deposits as they do on their federal regulatory report of condition. Thrifts— savings banks and savings and loans— are asked to report all deposits, excluding escrowed accounts, on a regulatory basis whenever possible. All data for 12/31/85 and 12/31/81 are as reported by the institutions in 1986 and 1982, respectively. These data have not been restated for mergers. With respect to mergers, data for prior periods are for the institution under whose charter the merger took place. (a)— In May of 1986, Wells Fargo Bank NA and Crocker National Bank merged under the latter's charter and the former's title. Therefore, data for Dec. 31, 1985, and Dec, 31, 1981, are for the former Crocker National Bank. (b)— Known as Home Savings of America, FS&LA, Los Angeles in 1981. (c)— Known as Great Western S&L Assn. in 1981 (d)— Known as State Savings & Loan Assn. in 1981. In Aug. 1983, State Savings merged with American Savings & Loan Assn., Beverly Hills. (e)— Known as Philadelphia Saving Fund Society in 1981. (f)— Known as First Nationwide Savings, FS&LA in 1981. (★)— Totals are for the top 25 deposit takers in 1986, 1985, and 1981, respectively. (†)— Includes commercial banks and all thrifts— savings banks, savings and loans, and credit unions.

A selected breakdown of deposit accounts for the top 300 commercial banks in total deposits on 12/31/86 from American Banker's "Roll Call" questionnaire, which asks for deposits as reported on the Federal regulatory report of condition. The breakdown includes **deposits in foreign offices**, which are deposits booked by the bank's foreign offices (RC-item 13b). Also included are the following three deposit accounts booked by the domestic offices of the bank: **IRAs**— Individual retirement accounts plus Keogh Plan accounts (RC-Schedule E, memo item 1a); **NOW Accounts**— Negotiable orders of withdrawal, including "Super NOWs" introduced in January 1983 (RC-Schedule E, memo item 3); and **MMDA's**— Money market deposit accounts— introduced in December 1982 (RC-Schedule E, memo item 4). **Net income** is for the full year 1986. ( )— Indicates a loss. **N.A.**— Not available. (1)— Deposit total corrected since publication on 3/19/87. The bank's rank was not affected by the change. **Please note:** Schedule E, item 3 "All NOW Accounts" was changed by Federal regulators within the last year to include both NOW and Super NOW accounts. Previously, item 3 included Super NOWs only. Unaware of this change, American Banker asked banks to report: "Super NOW accounts (RC-Schedule E, memo item 3)". Most banks reported the new combined figure for NOW accounts, but some reported only Super Nows. American Banker has either checked the Federal regulatory reports of condition or phoned the large banks to insure the accuracy of the NOW account column. However, the NOW account data for approximately 25% of the top 300 banks could not be verified. Therefore, it is possible that some of the these banks may have reported Super Now accounts only.

Top Deposit-Takers Among Commercial Banks

In Selected Deposit Categories as of Dec. 31, 1986 (Net Income for 1986 Included)

A breakdown of deposit accounts for the top 100 thrifts in deposits on 12/31/86. **Net Income**— For calendar 1986, unless otherwise indicated. **NOW accounts**— Negotiable orders of withdawal, excluding Super NOWs. **MMDA's**— Money market deposit accounts. **Super NOWs**— NOW accounts introduced in Jan. 1983. **IRAs**— Individual retirement accounts and Keogh Plan accounts. (†)— Net income is for the 6 months ended Dec. 31. (★)— Net income is for the 9 months ended Dec. 31. (°)— For fiscal year ended 9/30/86. (#)— Net income is for the 5 months ended Dec. 31. ( )— Indicates a loss. (1)— Deposits are approximate and subject to a final audit. (2)— Includes all IRA's, some of which are included in the other deposit categories. Also includes self-directed IRA's. (3)— The only Citicorp thrift subsidiary that "does not release this type of competitive information." (4)— NOW accounts include demand checking. (5)— Included in NOW accounts. **N.A.**— Not available.

California Banks Rank High in IRA Deposits

IRA and Keogh Account Growth

At Deposit-Taking Institutions — 1982 Through 1986

(In Billions of Dollars and Percent Share)

Yearend	Total IRA and Keogh	Commercial Banks	Thrifts	Money Market Funds
1986	$179.7	$72.8 (40.5%)	$96.2 (53.5%)	$10.7 (6.0%)
1985	$148.4	$59.2 (39.9%)	$80.9 (54.5%)	$ 8.3 (5.6%)
1984	$109.7	$43.8 (39.9%)	$59.0 (53.8%)	$ 6.9 (6.3%)
1983	$ 76.8	$30.0 (39.1%)	$41.8 (54.4%)	$ 5.0 (6.5%)
1982	$ 51.0	$17.5 (34.3%)	$28.9 (56.7%)	$ 4.6 (9.0%)

Data are from the Federal Reserve Board. Percentage shares are in parenthesis. Thrifts include savings banks, savings and loans, and credit unions.

Continued from Page 1

dale, Calif., was the top thrift in IRA deposits. First Nationwide Bank FSB, San Francisco, was the fastest growing institution in those deposits.

Despite a decrease for all thrift institutions in market share of IRA deposits at banks, thrifts, and mutual funds, the top 25 thrifts continued to increase their market share.

At commercial banks, however, the picture was the opposite. The top 25 banks posted a decrease in market share, while all commercial banks had an increase from a year earlier. Though the rate of increase in these deposits slowed significantly in 1986 from the year earlier, it still outpaced the increase of all deposits almost threefold.

The *American Banker* survey is a follow-up to the listings of the top 100 thrift institutions by deposits, published on March 6, and the top 300 commercial banks, published on March 19.

Today's survey results are presented in six major tables. One table shows net income and a breakdown of selected deposits for the top 300 banks. Another shows net income and the selected breakdown for the top 100 thrifts. (The tables begin on page 13.)

From this group of 400 financial institutions, the *American Banker* ranks and lists the top 25 deposit-taking institutions; the top 25 commercial banks in IRA deposits; the top 25 thrifts in IRA deposits, which include savings and loans, savings banks, and credit unions; and the top 25 institutions in IRA deposits.

Three of the top five banks and four of the top five thrifts in IRA deposits are California institutions.

Some of the reasons cited for the concentration in California include the number of large institutions in the state and their domestic and retail banking orientation. For instance, deposits in foreign offices of California's largest commercial banks do not exceed 35% of total deposits. In contrast, the deposits in foreign offices of large New York commercial banks (six of which are among the top 10 deposit-taking institutions) are between 45% and 66% of total deposits.

Jim Dorsey of the *IRA Reporter*, a Cleveland-based publication, also noted that California does not have unit banking laws. Mr. Dorsey said that if surveyed on the holding company level, other banking companies could appear among the largest IRA gatherers.

Total deposits at all institutions increased 7.9% in 1986, to $3.5 trillion, a slight improvement from the 7.5% rise reported in 1985. IRA deposits were up 21.1% to $179.2 billion, compared with 35% in 1985.

IRA deposits at the top 25 thrift institutions and top 25 banks increased 22.8% and 18.9%, respectively. The largest gains in those groups were posted by First Nationwide Bank, San Francisco, and by National City Bank, Cleveland, with respective increases of 107.6% and 60.9%.

First Nationwide's doubling of IRA deposits, primarily through acquisitions, pushed it to second place among all thrifts and fifth place among all institutions, from eighth and 13th place, respectively.

National City, which was also involved in acquisitions in 1986, pushed into the top 25 banks in IRA deposits, gaining 13 places to rank 24. Another Ohio bank, AmeriTrust Co., Cleveland, joined the top 25, rising nine spots to rank 17.

Market share of IRA deposits has remained relatively stable over the past several years. Excluding IRA accounts at insurance and brokerage firms, at yearend 1986 the top 25 thrifts controlled 9.8% of all IRA deposits, compared with 9.7% in 1985 and 9.6% in 1984. For all thrifts, market share declined to 53.5% in 1986, from 54.5% in 1985, 53.8% in 1984, and 54.4% in 1983.

At commercial banks, market share increased to 40.5%, against 39.9%, 39.9%, and 39.1% in the preceding three years. The top 25 banks' share of the IRA market fell to 8.3% in 1986, from 8.5% the previous year.

As a percent of total deposits, IRAs have been increasing. For all thrifts, IRAs accounted for 7.7% of total deposits, a slight rise from 7.6% in the year earlier period. For all commercial banks, IRAs accounted for 3.2% of all deposits, compared with 2.3% in 1985. Since 1981, IRA deposits at commercial banks have skyrocketed to $72.8 billion from $6.5 billion. At thrift institutions, IRAs have gone to $96.2 billion from $13.6 billion.

In other findings:

- Commercial banks accounted for 64.9% of all deposits with $2.3 trillion, a slight increase from 64.5% in 1985. That year, all banks had $2.1 trillion in deposits. Thrifts controlled 35.1% of the nation's deposits with $1.2 trillion, down from 35.5%, or $1.17 trillion in the year earlier period.
- Other big percentage gainers among the top 25 thrifts in IRA deposits were: Great American First Savings Bank, San Diego, with an increase of 65.7%; Navy Federal Credit Union, Washington, D.C., 39.8%; and Anchor Savings Bank FSB, Northport, N.Y., 39.6%.
- Among the top 25 commercial banks in IRA deposits, other big gainers include: Connecticut Bank & Trust Co., Hartford, up 44.7%; Fidelity Bank NA, Malvern, Pa., 40.5%, and Connecticut National Bank, Hartford, 32.0%.
- Navy Federal Credit Union, Washington, D.C., had the highest percentage of IRA deposits to total deposits of any of the top institutions with 22.1%, compared with 17.9% in 1985. At commercial banks, Comerica Bank-Detroit's IRA accounts made up 6.89% of total deposits, the highest among the top 25 banks. ■

Dear Reader, How Are We Doing?

The American Banker wants to make sure our survey on top deposit takers meets your information needs. So would you spend a moment to give us some feedback? Please clip out this questionnaire and return to: William Zimmerman, Editor, American Banker, One State Street Plaza, New York, N.Y. 10004 (212) 943-5712.

2 More Banks File for Charters in Philadelphia Area

By A. JOSEPH NEWMAN JR.

PHILADELPHIA — Add two new names to a growing list of entrants on the suburban Philadelphia banking scene.

Charter applications have been filed with the Pennsylvania Department of Banking for the proposed Capital Bank and Trust Co. in Spring House, Montgomery County, and for the proposed Dominion Bank in Devon, Chester County.

Capital Bank and Trust, to be capitalized at $5 million, plans a best-efforts public offering of 500,000 shares at $10 a share. Joseph Martinez, a Spring House businessman, would be chairman and chief executive officer.

No public offering is planned for the proposed Dominion Bank, whose initial capital of $4.5 million would come from a group of private investors. Its president and chief executive would be William H. Bromley, who had been slated to become president and chief executive of Metrobank of Philadelphia NA, which received a preliminary charter last October from the Comptroller of the Currency.

Mr. Bromley resigned at the end of last year. He is a former regional vice president of the old Industrial Valley Bank and Trust Co., which merged into Fidelity Bank in Philadelphia last year.

The new suburban banks would join a bevy of newcomers, including National Bank of the Main Line, Wayne; Chestnut Hill National Bank, in a residential neighborhood of Philadelphia; and Freedom Valley Bank, of West Chester. Pittsburgh's Equibank has also set up shop in Wayne. Applications have either been filed or are planned for other new banks in Newtown, Bucks County, and in the Main Line area of the Philadelphia suburbs. ■

Superregionals . . .

Continued from Page 2

be in place. But he cautioned the analysts, "I've been saying for five years that we would have nationwide banking in five years."

Among the existing superregional banks in the next decade, he said, he expects that about half will pursue the final round of mergers to achieve nationwide status, with the remainder pursuing other alternatives.

The *American Banker* defines a superregional banking firm as a non-money center banking company that is ranked among the top 100 banking firms in total assets and has merged across state lines to establish a full commercial banking presence in another state.

The superregional category of banks — which many analysts view as the nation's most profitable group of banking companies — was quickly formed after the U.S. Supreme Court in June 1985 upheld regional interstate banking compacts in Northeast Bancorp v. Board of Governors.

Besides First Union, which now operates in four southeastern states, the superregional class includes such aggressive organizations as Security Pacific Corp., Los Angeles; Fleet Financial Group, Providence, R.I.; and Banc One Corp., Columbus, Ohio.

"When I look at the map," said Mr. Crutchfield, "my best guess is that there will be a tier of maybe a dozen or 15 superregionals. They will be in the Southeast and New England, with a couple in the Midwest, one or two in Texas, and two or three each in New York and California.

It is within this group that "crossroads decisions" will have to be made about whether or not to pursue the final round of consolidation in the banking industry — either as acquirers or acquirees — or concentrate on nongeographic aspects of banking.

Some analysts have suggested that the consolidation among superregionals has already begun. There have been two such agreements so far this year — the proposed acquisition of Rainier Bancorp., Seattle, by Security Pacific and the prospective merger of Norstar Bancorp, Albany, N.Y., into Fleet Financial.

While Mr. Crutchfield said he could not foresee exactly how the nationwide banking industry will take shape, he was certain about the significant pitfalls on the road ahead for superregional banks.

"One thing I know we can't do is give up our product mix," he said. "If we do that, we give up our profitability. We've got to stay with middle-market customers and we've got to stay with consumers, whether we are $50 billion or $150 billion in size.

"We can't get the big bank-itis," the North Carolina banker emphasized. "If we change our product mix and go into areas we don't know much about, we will eventually get into trouble."

Concerning the Japanese, Mr. Crutchfield said it was his guess that they will become "significant players" as nationwide banking emerges, but he was not quite sure how. "They can't use stock and they may not have the wherewithal to pay $4 billion or $5 billion in cash," he said.

Moreover, he said he expected the Japanese bankers to stay with a national strategy and avoid much activity at the regional level or below. Difficulties could spring up, he said, if they attempted to "operate big retail systems, big branching systems, in areas with lots of strong regional players." ■

Profitable Community Banks Rely on Old Ways

Lending Policies, Service Are Cited by Top Earners

By MICHAEL WEINSTEIN

While the banking industry grapples with the changes of deregulation, executives at the nation's most profitable community banks said they are still using their tried-and-true techniques to generate healthy profits.

The community bankers' commandments: Know thy borrower, treat customers well, and keep a lid on expenses.

But good loans are often tough to come by, and in at least a few cases, banks have relied on securities investments for their robust returns.

The *American Banker* today ranks the 100 most profitable community banks, based on return on assets. (Tables begin on page 22.) The survey defines a community bank as an independently owned bank insured by the Federal Deposit Insurance Corp. and not affiliated with a holding company. Assets must be between $150 million and $35 million.

5 Most Profitable Community Banks
Based on Return on Assets
First Nine Months of 1986 (in Percent)

1.	Putnam County Natl. Bank, Carmel, N.Y.	4.421
2.	Hill Bank & Trust Co., Weimar, Tex.	4.245
3.	National Bank of Stamford, N.Y.	4.085
4.	Peapack Gladstone Bank, Gladstone, N.J.	3.641
5.	Harlan National Bank, Harlan, Ky.	3.514

Using figures as of Sept. 30, 1986, 4,900 of the nation's banks are classified as community banks under that criteria. Of those, 154 had returns on average assets that exceeded 2% for the first nine months of 1986.

For the second year in a row, Putnam County National Bank, Carmel, N.Y., ranked as the nation's most profitable community bank, with a return on average assets for the first three quarters of 4.4%.

Putnam County National has been family-owned since its founding in 1865 in what is now a suburb north of New York City.

"We all grew up in this area that we serve, and we know it well," said Marigrace Ryder Blanks, the bank's president. "My two sons make all the loans."

National Bank of Stamford, in Stamford, N.Y., about 150 miles outside New York City in the resort area of the Catskill Mountains, was the third most profitable community bank for the second consecutive year, with a 4.1% return on assets.

"Our main key is to make loans, but to make good loans," said Gary E. Sherwood, president of the Stamford bank.

"The biggest challenge [for commu-

Henkel Resigns Bank Board Post In Wake of Furor

By JIM McTAGUE
Washington Bureau

WASHINGTON — Lee Henkel, the controversial member of the Federal Home Loan Bank Board, resigned Wednesday and asked that his formal nomination to the thrift regulatory panel be withdrawn by President Reagan.

"I have concluded that I have not, and will not, be able to fully accomplish my agenda with the constant distraction of unfounded charges and the resulting investigations," Mr. Henkel said in a statement released by the

$5 Billion Recapitalization for FSLIC Voted by House Banking Committee

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — The House Banking Committee on Wednesday approved a $5 billion rescue plan for the ailing Federal Savings and Loan Insurance Corp., overturning a subcommittee decision and handing a victory to committee Chairman Fernand J. St Germain.

The $5 billion figure was strongly supported by the thrift industry's key trade group, the U.S. League of Savings Institutions, which promptly hailed the vote as "a businesslike approach for the FSLIC bonding authority."

It was opposed by the Reagan administration, which is pressing for a plan that would authorize a funding corporation to borrow up to $15 billion over five years for the FSLIC. The administration has warned that it might veto a bill containing too little borrowing authority.

Rep. Thomas Carper, D-Del., who had pushed the $15 billion plan through the financial institutions subcommittee only a day earlier, said the House leadership had lobbied heavily against him.

"I'll let the broken arms hanging by the sides of the committee members

American Banker defines a community bank as an independently-owned (not owned by a bank holding company), FDIC-insured bank (exclusive of non-deposit trust companies) with assets of between $35 million to $150 million on Sept. 30, 1986. The listing includes community banks that were profitable in both 1986 and 1985. **Returns on Average Assets and Average Equity Capital** for 9/86 are calculated by annualizing net income for the first nine months of 1986 and dividing by average assets and average equity, respectively. The **Efficiency Ratio** is net non-interest expense as a percentage of net interest income. It tells you how much it costs the bank— in cents— to generate $1 of net interest income. **Deposit Growth Rate** shows the percentage change in deposits over the period Dec. 31, 1981, to Sept. 30, 1986. **Net Income Per Employee** is net income (net income for the first 9 months of 1986 is annualized) divided by the number of employees at the end of the period. **Source of data: ADP Data Services, New York.**

Careful Lending, Investing Keep Community Banks Strong

Continued from Page 1

nity banks] in the next 10 years is going to be getting loans," said Jack Whittle, chairman of Whittle & Hanks Inc., a bank consulting firm in Chicago. "The big banks can go where the action is. The small banks can't."

And in many small towns, quality loans are tough to find, especially if a single, struggling industry dominates the local economy. Community banks "are after quality loans all the time," Mr. Whittle said.

At yearend 1985, Putnam County's loans represented 33% of earning assets, and National Bank of Stamford's loans were 42% of earning assets, according to Cates Consulting Analysts Inc. in New York, which analyzes publicly available financial data.

For banks nationwide with $40 million to $100 million in assets, the average ratio of loans to earning assets is 59%, according to Cates.

"Neither of these banks are aggressive in lending," observed David C. Cates, chairman and chief executive officer of Cates Consulting.

Both banks, he said, have unusually large long-term investment portfolios, which boosted their yield on earning assets without adding significantly to operating expenses.

"You've got a double whammy at work for very high profit," Mr. Cates said.

Twelve of the top 100 banks in profitability are based in Texas, where the biggest banking companies have been battered by the slumping energy business.

See Tables
Pages 22-23

"You have to look at your man and know him," declared Jeff Austin, president of First State Bank in Frankston, Tex., about 100 miles southeast of Dallas. First State earned 2.9% on its assets.

"We have tried to loan to the people we feel are money-makers," said Mr. Austin, a 50-year veteran of the banking business. "I feel like I have a knowledge of the resale value of what I loan on."

First State has managed to steer clear of the worst of the energy problems, Mr. Austin said.

The bank's energy-related loans are mainly to so-called "make ready" companies, which prepare a site for oil drilling. "They've lost some money, but not a whole lot," he said.

Another Texas bank, Hill Bank & Trust Co., Weimar, about halfway between Houston and San Antonio, ranked second in profitability with a return on assets of 4.2%. Hill Bank & Trust has no energy loans, and the biggest portion of its loans are to livestock farmers, said president John A. Hajovsky, who has spent 64 years with the bank since joining it at age 16 as a janitor.

"No matter how bad the market is, shrewd, smart bankers can make money," said Mr. Whittle, the consultant.

Service is also important, according to community bankers.

"Let customers feel like they're a part and you appreciate their business," Mr. Hajovsky said.

"Our basic thing is try to be a people-to-people bank," echoed Mr. Sherwood of National Bank of Stamford.

Community banks also strive to keep costs down.

"We have tight control over expenses," said Ms. Blanks of Putnam County. "I sign all the checks."

In New Hampshire, at least one bank is sharing the fruits of New England's booming economy.

"There's so much business. It's good times," said Paul St. Laurent, executive vice president at Somersworth Bank in Somersworth, N.H., which earned a 2.8% return on assets.

"We've been growing like crazy-," said Mr. St. Laurent, adding that loans and assets have nearly tripled in the last few years.

For the future, community bankers are predicting more of the same cautious business practices.

"We just keep going right on," Ms. Blanks said. "When something happens, we adjust." ■

Empire of America Buys Deposits of Failed Thrift In Northern California

West Coast Bureau

LOS ANGELES — Empire of America-California Federal Savings Bank said it has acquired $79.2 million in insured deposits that were held by the Equitable Savings and Loan Association before it failed last Friday.

Equitable, with assets of $59.1 million, was based in San Mateo in Northern California, but operated four offices in Southern California. Empire of California, based in Woodland Hills, will lease Equitable's offices from the Federal Savings and Loan Insurance Corp., which currently is conducting an inventory of Equitable's assets.

Empire of California, a unit of Empire of America Federal Savings Bank, Buffalo, operates 18 other branches, including 13 in Southern California. Its parent, Empire of America, has assets of $9.1 billion and 148 offices in California, Florida, Michigan, New York, and Texas.

In closing Equitable, the Federal Home Loan Bank Board said Equitable and its wholly owned subsidiary, ESL Service Corp., experienced "substantial losses" from real estate investments, "which included a series of 'flip' transactions, self-dealing, payment of unearned fees to principals of an affiliate of Equitable, and other unsafe and unsound underwriting decisions."

A "flip" transaction is one in which a group of people sell property among themselves several times during a short period. This usually is done to artificially raise the price of a property so that loans can be obtained on it based on inflated appraisals.

Federal regulators also cited the thrift with violations of regulations concerning limits on commercial loans, loans to one borrower, the issuance of loan commitments in excess of appraised value, and violations of insurance regulations relating to loan and investment underwriting, including deficient and nonexistent appraisals.

Equitable was acquired in May 1985 by Vesteq Financial Services, whose principals are three real estate investors, Mark W. Stevens, Phillip J. Andrews, and Bruce L. Siriani.

The Bank Board said the three made all the real estate investment and lending decisions for Equitable and its service corporation. ■

American Banker • Bond Buyer 1987 Conferences

Mark Your Calendar Now!

This new challenging conference series has been designed to explore and solve problems common to executives in banking and financial service industries. Each conference offers:

- **A compelling faculty of recognized experts**
- **A comprehensive and relevant program**
- **Techniques for improved performance and enhanced profits**
- **An opportunity to meet and communicate with colleagues**
- **An outstanding location**
- **The option to add on a holiday weekend at discounted rates**

Furthermore: Anyone returning the coupon below, with a check for $25 for each conference chosen, will be guaranteed a 15% discount – bringing the total registration fee per conference to $760 rather than $895.

All conferences are sponsored by American Banker • Bond Buyer, publishers of the daily financial service newspapers you have learned to count on for up-to-the-minute information and analysis of issues vital to your organizations.

Plan now to join other leaders at one or more of these stimulating 1987 conferences:

Latest Strategies and Techniques in Portfolio Management . . . Evaluation of the fixed income securities market	Chair: Frank J. Fabozzi, Ph.D. Visiting Professor Sloan School of Mangement Massachusetts Institute of Technology	April 6-7	Grand Hyatt New York City	C
		April 23-24	The Fairmont Dallas	D
The Crisis in Commercial Lending . . . Analyzing the competitive challenge: opportunities and risks	Co-Chair: Sanford Rose Associate Editor American Banker	June 1-2	The Waldorf-Astoria New York City	E
	Co-Chair: Christopher L. Snyder, Jr. President Loan Pricing Corporation	June 15-16	The Fairmont San Francisco	F
Strategic Responses to the Changing Regulatory Environment . . . Meeting the challenge of restrictive and enabling legislation.	Chair: Karen Shaw Executive Vice President Institute for Strategy Development	September 10-11	The Waldorf-Astoria New York City	G
		September 21-22	The Fairmont San Francisco	H
Investing in Mortgage-Backed Securities: Portfolio Strategies and Risk Management . . . A re-examination of one of today's fastest-changing instruments	Chair: Frank J. Fabozzi, Ph.D. Visiting Professor Sloan School of Management Massachusetts Institute of Technology	October 8-9	Grand Hyatt New York City	I
		October 19-20	Americana Canyon Hotel Palm Springs	J

Subsequent Conferences to be Announced

Random Thoughts

By SANFORD ROSE

At the bank holding company conference held last week in Washington, D.C., by the Banking Law Institute, Marshall Davidson, a managing director of Drexel Burnham Lambert, advanced the challenging notion that banks can raise their stock prices by the sale of their nonperforming assets.

It seems clear that the overhang of nonperformers is one of the principal factors depressing the ratio of market values to book values. Investors obviously discount the common stock of banks by an amount equal to the difference between the book value of the impaired assets and their perception of true value.

This discounting process of course raises the cost of bank capital, which is defined as the inverse of the price-earnings multiple. Banks are in effect being forced to fund low-yielding or no-yielding nonperformers with equity money whose cost has been lifted to outsize levels by the very existence of these nonperformers.

If banks could dispose of their nonperformers, the market-to-book

Banks 'Blame It on Rio,' But Analysts See Other Reasons for Lower Earnings

By JOHN P. FORDE

NEW YORK — Brazil's economic woes have presented banks with a ready excuse for lower first-quarter earnings, but analysts say domestic factors, such as narrower net-interest spreads, would have dampened results at major banks anyway.

The results should be better at regional banking companies, however, since these banks, especially in New England, in the Southeast, and on the West Coast, show strong asset growth.

Carole Berger, an analyst at Cyrus J. Lawrence Inc., says that major money center banks have decided to "blame it on Rio" in the first quarter. The companies have reversed interest payments on Brazilian debt because of the moratorium that country imposed on foreign debt payment in February. In reversing payments, the companies admitted that some interest included in the fourth quarter on these loans was not received.

Some of the banks that have announced they will switch Brazilian debt to nonaccrual status include J.P. Morgan & Co., Manufacturers Hanover Corp., and Chase Manhattan Corp.

All analysts agree that the change in the status of Brazilian loans will take a sizable chunk out of first-quarter earnings. However, they also believe that the reversal of interest on Brazilian debt may not cover all the reasons for major banks' earnings shortfalls in the first quarter. Most say that the performance of other areas from which banks derive their earnings seemed brighter at this time last year.

"Earnings for the first half, and more specifically, for the first quarter of last year, were robust," said Ms. Berger. In the first half of 1986, banks enjoyed healthy net-interest margins because of declining interest rates. This decline in rates also helped make bond trading profits "much easier to come by" during that quarter, she said.

Treasury Issues New Rules on Cash Reporting

Record Keeping Will Be Laborious for Banks

By JAY ROSENSTEIN
Washington Bureau

WASHINGTON — The Treasury Department on Monday announced tougher transaction-reporting requirements for financial institutions as part of the government's crackdown on money laundering.

The rules, which take effect within 90 days, will make it more laborious for banks to handle large-dollar transactions. But the measures are considered less burdensome for banks than the ones the Treasury had proposed for comment in August.

The rules clarify that a bank is required to report total daily transactions for one customer in excess of $10,000 even if these were carried out for lesser amounts in multiple transactions at different branches.

On one particularly controversial point, though, the department said it has not yet reached a decision. The agency had initially proposed requiring financial institutions to record and report cash purchases of "monetary instruments" of more than $3,000. Current reporting is for transactions of $10,000 or more.

Monetary instruments are defined in the new rule as personal checks, cashier's checks, travelers checks, promissory notes, checks made out to "fictitious payees," and certain other checks.

The Treasury and Justice departments had said in August the reporting of monetary instruments in excess of $3,000 would help the government keep track of efforts to evade statutory requirements that currency transactions of $10,000 be reported. The Au-

Financial Services Companies Spent More on TV Ads in '86

By **PHILIP T. SUDO**

NEW YORK — Television advertising by financial services companies rose 21% last year, nearly triple the rate for television advertisers overall, according to a recent study.

The Television Bureau of Advertising, or TvB, a New York-based trade group, said financial services companies spent $857 million in 1986 for national and local spot television commercials, compared to $709.6 million the year before.

The study, released late last month, is based on data compiled by Broadcast Advertisers Reports. It placed financial services sixth among the various industries using television to advertise, following food and food products, automobiles, fast food, toiletries, and proprietary medicines.

"Financial services is clearly a strong growth category," said Richard Severance, senior vice president of the group. "The general reason is the consolidation in the industry and the increased competitiveness."

Insurance companies spent $263.7 million on television advertising last year, a 32% hike over 1985 and more than any other financial services sector.

Banks and thrifts were the next biggest spenders, increasing their television spending 10% to $219.5 million. First Interstate Bancorp led all banks with a $9.2 million budget for television, followed by BankAmerica Corp. at $6.7 million, a figure that includes advertising for subsidiary Seafirst Corp. in Seattle. Citibank was third, spending $4.1 million.

Spending figures for each company are broken out according to the type of financial service being offered, the study notes. For example, Citicorp's TV advertising costs for Diners Club Inc. are listed in the credit card category; costs for its savings bank subsidiaries are listed in the thrift category; ads for Citibank are listed under bank advertising.

In addition to insurers, banks, and thrifts, the study's financial services category included credit cards and traveler's checks, investment services, real estate, and consumer finance.

American Express Co. was the leading advertiser overall (including all financial services subsidiaries), allocating $80.5 million for television, 41% more than the year before. Sears, Roebuck and Co. followed with $73.2 million, a 110% increase due in large part to heavy marketing of the newly launched Discover card.

Blue Cross/Blue Shield led all insurers, spending $25.7 million, followed by Prudential Insurance Company of America ($24.3 million), Allstate In-

HOME EQUITY LENDING:
GROWTH, STRATEGIES, & COMPETITION
A New Research Study by SMR Research Corporation

Home equity and second mortgage loans – once spurned by most lenders – are now the hottest financial products. But how big will the business become? What lending and marketing strategies will be most successful? After a year of work, we present answers to these and other key questions in a landmark study of 247 pages.

The study begins with data never before available about the size of the business, broken out by banks, thrifts, finance companies, mortgage companies and credit unions. That's just a warm-up. The study also presents:

1. Case studies of 20 leading home equity players.
2. Case studies of credit card access to home equity lines.
3. 1987-1988 market forecast and analysis of ultimate market size.
4. How equity loans will steal market share from auto loans, credit cards, and other assets. The real impact of tax reform.
5. New ideas, from "franchised" equity lending systems to affinity marketing. Also: Which marketing methods really work.
6. Dozens of statistical tables, including a ranking of top players.

For a free Prospectus describing this extremely detailed study, call or write: Mark S. Kamm, SMR Research Corporation, 382 Route 46, Budd Lake, NJ 07828. (201) 691-1255.

Hibernia Profits as Judge Rules It Cannot Use 'Equalizer' Name

What better way to attract attention to a new product than to plug it with an unusual name? But that is not exactly what the Hibernia Bank in San Francisco had in mind when it changed the name of its Equalizer home equity line of credit to the "Bleep" account.

Originally dubbed the Equalizer, the account had to undergo a name change because Charles Schwab & Co. had first dibs on it. The San Francisco-based discount brokerage maintained in court that customers might confuse its computerized financial information service with the bank's credit product. A federal judge "barred use of the name [Equalizer] because of a possibility of confusion," said a Hibernia spokeswoman.

In response to the judge's decision, Hibernia ran a series of commercials for the equity line, but instead of the original Equalizer name, the bank dubbed in an electronic bleep. At the end of each ad, a live tag was added explaining the reason for the bleep.

The Monitor

"The product had been successful in general," said the spokeswoman, "but since the bleep was introduced, there has been a possible 20% increase [in demand]." The electronic bleep apparently piqued people's interest, since they called up branches demanding more information, she said.

The name was changed, after more than a month, to HiberniaLine. Even without a bleep, people are still interested in the product, said the spokeswoman.

BANK SPONSORS CHESS TOURNEY: About a dozen Burlington, Vt.-area high school teams will try to outsmart nationally ranked master David Carter at a game of chess.

The competition between Mr. Carter, a Howard Bank employee, and the students is being cosponsored by Burlington-based Howard Bank and the Vermont Chess Association. It will take place at the Essex Junction Educational Center on April 11.

Entrance fees, combined with a $250 gift from the Howard Bank, will amount to a prize of about $500 for the winning team.

The winnings will go specifically to fund a program of the school's choosing that encourages intellectual development.

ADVERTISING AGENCY SELECTED: First Security Corp., Salt Lake City, said its advertising will be handled by Borders, Perrin & Norrander Inc., a leading regional advertising agency based in Portland, Ore. By recently merging with Snedaker Communications Group Inc., the advertising agency easily met the $5.1 billion financial services company's requirement that its new agency have a Salt Lake City office. Borders, Perrin & Norrander bills more than $30 million of advertising annually. Clients include Blue Cross and Blue Shield in Oregon and Washington State and Kenworth Truck Co.

IMPROVING QUALITY OF SERVICE: Improving the quality of service will be one of the issues discussed at the Bank Administration Institute's National Conference on Retail Banking, to be held April 28-30 at the Hyatt Regency in Chicago. Charles B. Schwab, founder of the discount brokerage bearing his name, and Ron K. Glover, president of Travelers Cheque Group, American Express, will be among those advising on how to compete more successfully. The president of Hyatt Hotels Corp. and the president of ITT Life Insurance Corp. will also address the conference.

TELLER TRAINING PROGRAM: The Bank Administration Institute introduced a bank teller training program, Modern Teller Training 3, which emphasizes customer service. The program is divided into 10 separate handbook and video units, each stressing customer service and satisfaction. The video segments take the trainee through the handbook material step by step. Modern Teller Training 3 can be adapted to either class or individual instruction.

DEMOGRAPHIC SOFTWARE AVAILABLE TO BANKS: A computer program that can provide banks with customer base information by matching the household balances against special demographic tapes was recently introduced by Bank Marketing Services Inc., Cambridge, Mass. The data that may be extracted to make up customer profiles include: income, age range of head of household, type and value of dwelling, length of residence, and telephone number. These data could assist banks in planning their marketing campaigns and strategies.

BANKING FOR THE BLIND: Blind people can now conduct their banking business 24 hours a day on automated teller machines at 23 United Banks of Colorado locations. The Denver-based banking company has equipped the ATMs with instructions in braille that tell, in step-by-step sequence, how to withdraw cash, make deposits, transfer between accounts, and check account balances. United Banks says it is the first institution in the state to offer these customized ATMs.

GAUGING SELF-SERVICE SWITCHES: Synergistics Research Corp., an Atlanta-based research firm, has announced a new study. "The Transition to Electronic Self-Service at the Branch" will be an examination of consumer response to electronic self-service branch applications. Synergistics says the study will assist commercial banks, thrifts, credit unions, and equipment venders in developing and implementing successful branch self-service systems. The study will measure consumers' attitudes toward technology and branch activities, current branch and financial services usage, and consumers' orientation to self-service. The demand for electronic self-service for transactions, customer service, and sales applications will be assessed. Synergistics will report its findings in late May.

➸ Continued from Page 8

surance Co. ($21.2 million), and Aetna Life & Casualty Co. ($16.3 million).

American Express led credit card and traveler's check advertisers by spending $66.4 million, followed by Discover ($25.23 million), MasterCard International Inc. (up 16% to $25.16 million), and Visa USA Inc. (down 18% to $14.8 million).

Shearson Lehman Brothers Inc. led the stockbrokers and investment advisers category, spending $12.8 million — twice its 1985 figure — followed by Merrill Lynch & Co. with $10.8 million (down 38%), and Dean Witter Reynolds Inc. with $9.5 million, a threefold increase.

Two of the biggest spending increases came from emerging regional banks: First Union Corp. in Charlotte, N.C., and Sovran Financial Corp. in Norfolk, Va. First Union placed sixth among banks by spending $3.3 million, a 137% increase. Sovran placed 10th with $2.2 million, a 190% increase.

There was similar volatility among spending by thrifts. H.F. Ahmanson, the Los Angeles-based holding company for Home Savings of America, remained the leading spender with $8.8 million, roughly the same as in 1985. But First Nationwide, after spending only $6,300 in 1985, placed second among thrifts with $5.5 million. Sears Savings Bank ranked seventh ($2 million) and Citicorp ninth ($1.7 million) after spending zero the year before.

"That is characteristic of an industry that hasn't matured within its customer base," Mr. Severance of TvB said. "What's happening is that people are trying to build an image for themselves — 'We are a *financial services* company' — or they spent a lot of money to build one last year and they no longer need to sustain it."

The preponderance of image ads is "clearly logical," he said. Given the consolidation taking place within the industry, financial services firms, and banks in particular, have found it easier to distinguish themselves through image than through products or prices.

"The most important asset a bank has is its loyal customer base," Mr. Severance said. "You don't get a loyal customer base with a short-term interest rate that's one-sixteenth of a percentage point lower than the other guy."

Mr. Severance said he expects financial services companies to increase their television advertising over the next 10 to 20 years.

"There's a gigantic marketing battle going on, and its going to continue for a long period of time," he said. "There are too many fights going on for it to be mature within 10 years. The regional banks are trying to get strong enough to resist Citibank when they open up interstate banking; insurers are being threatened by the encroachment of banks; everyone's trying to broaden the public's perception and get into other areas."

He likened the current advertising wars to those in the beer, airline, and telecommunications industries. The common denominator: deregulation.

"Television always benefits when an industry becomes more competitive," Mr. Severance said. "Deregulation is wonderful for TV." ■

TV Ad Use Grows As Banks Spread Across State Lines

By DON MUNRO

NEW YORK — Banking companies are relying more heavily on television advertising as they grow from large in-state institutions to regional interstate companies, a television advertising executive said.

"If you're limited to one market, the use of television advertising is less effective," said Robert Grebe, a vice president at Television Bureau of Advertising, or TvB, a New York firm that helps networks sell ad space.

"But as banks become more regional," he continued, "television becomes more of a factor in their ad expenditures. That's what's happening."

As an example, Mr. Grebe cited the history of local, or spot television, and network television budgets at the First Interstate Bancorp, Los Angeles.

In 1980, one year before the Western Bancorp. unified its 21 banks in 11 western states under the First Interstate name, the company spent only $2.38 million on local television advertising.

"The next year, the new name came, and local television spot expenditures went up to $4.71 million. And for the first time, the company advertised the First Interstate name in the western states on regional network television, spending $122,900," Mr. Grebe noted.

"If you look back at those two years, you see that in one year alone expenditures doubled," he said. "Today, [First Interstate is] up to the $9.2 million level for television advertising," a 5% increase over 1986 expenditures, according to a recent study the group released.

However, television advertising is not the only medium available to growing regional bank holding companies.

"Television advertising becomes more effective if you can cover a region that way," said Paul Minch, a senior vice president at First Interstate. "But

Japanese Increase Market Share in US Lending

But Position of British Banks Shrinks On Midland Sale of Crocker National

By BART FRAUST

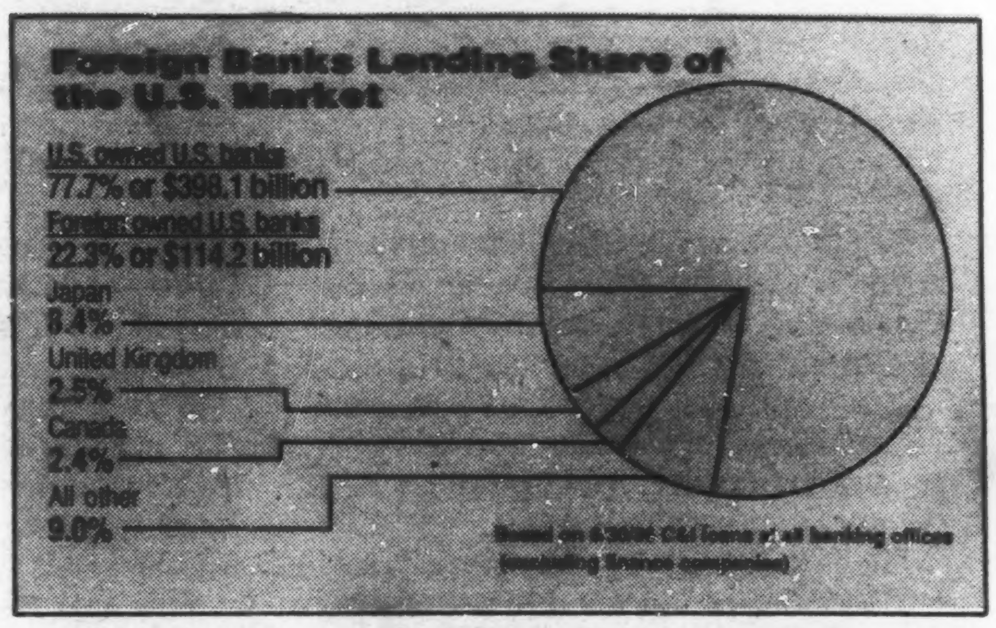
NEW YORK — In the U.S. commercial loan market, the Japanese are hot, the British and Germans are not, and the Italians, Swiss, and Dutch are coming on strong.

The Japanese last year solidified their position as the most dominant foreign banks in the U.S., increasing their share of the U.S. commercial loan market to 8.4% from 7.6% the year before, according to the *American Banker*'s latest survey of foreign banking in the U.S.

British banks, the second largest foreign group in the U.S., saw their market share slip to 2.5% from 2.9%. In large measure, this was the result of the sale last year of Crocker National Corp., San Francisco, by London's Midland Bank.

The market shares of other nations continue to be relatively small, but the data show which are aggressively increasing their U.S. commercial lending positions and which are not.

Italian banks increased their U.S. business loans by a robust 33.3%, Dutch banks by 35.7%, and Swiss banks by 20%. In contrast, German banks cut their U.S. commercial loans by 16%.



The numbers on Italian banks do not reflect Banca Commerciale Italiana's sale of Long Island Trust Co., Garden City, N.Y., to Bank of New York Co., which occurred after the survey date.

The *American Banker* survey appears in two parts this year. The first part, published on Feb. 26, charted the growth in foreign banks' U.S. offices. Today's results focus on foreign

CalFed and British Firm Will Form Property-Casualty Insurance Company

By NINA EASTON
West Coast Bureau

LOS ANGELES — CalFed Inc., the owner of the nation's fourth largest savings and loan, is set to plunge into London's sophisticated property/casualty insurance business.

CalFed officials will announce today the formation of the Anglo-American Insurance Co., capitalized at $80 million, to write excess coverage on property/casualty insurance policies. Anglo-American will share, on a 50-50 basis, all premiums and risks on those policies with Walbrook Insurance Co., which is owned by London United Investments PLC, a Lloyd's of London syndicate.

"CalFed's move into the property/casualty insurance business has been studied for 10 years," said George P. Rutland, CalFed's president and chief executive officer. Serious discussions on the London move have been going on for two years, he added.

All parties came to a final agreement last November, but they had been waiting for regulatory approval from United Kingdom authorities. These approvals have been received, and the venture will begin business next week.

This is CalFed's second move into the property/casualty business in less than a year. Last May, CalFed invested $10 million in a subsidiary called CalFed Insurance Syndicate Inc.,

Japanese Banks Lead List of Foreign Commercial Lenders in US

Continued from Page 1

banks' commercial and industrial loans, deposits, and assets in the U.S. The data are for midyear 1986.

On June 30, commercial and industrial loans at foreign banks in the U.S. totaled $120.9 billion, up 8.1% from midyear 1985. The rate of growth declined from the previous year's 13.8% rise, again reflecting the Crocker sale and a generally sluggish commercial loan market.

Foreign banks' share of the American business loan market increased to 22.3% from 21.9%. But this small rise does not tell the whole story of foreign banks' increasing involvement in the U.S. market.

"We consider ourselves a U.S. bank in the U.S. market," said Michele Jacquet, general manager of the New York branch of Banque Paribas, in a recent interview.

Anthony J. Walton, executive vice president in charge of the U.S. operations of Australia's Westpac Banking Corp., said the majority of his bank's U.S. customers have no business ties to Australia.

Excelling in Loan Sales Market

Foreign banks are the biggest players in the burgeoning loan sales market, buying participations in loans originated by U.S. banks. They are a commanding presence in some business loan areas, particularly the financing of corporate acquisitions. It has been estimated that foreign banks hold about a 30% share in the U.S. leveraged buyout market.

In some cases, they have competitive and regulatory advantages over their U.S. counterparts. Japanese banks, for example, have lower capital requirements than U.S. banks and thus can afford to price loans more cheaply.

In addition, 15 foreign banks are permitted under grandfather provisions of the federal International Banking Act of 1978 to underwrite corporate securities, an area that is off-limits to U.S. banks. Thus, these foreign banks have a competitive edge in offering "one-stop" shopping of banking services to corporate clients, a goal of many large U.S. banks.

For U.S. banks, the growth of foreign banking has meant more competition and narrower profit margins on business loans. While this troubles American bankers, it is welcome news to their corporate clients.

"Foreign bankers are keeping U.S. banks on their toes and are forcing U.S. banks to reassess services to clients," said United Technologies Inc., in a prepared statement from the multinational corporation's treasury department.

And foreign banks are not just focusing on the largest corporations. Robin Sewell, who manages the U.S. operations of Australia and New Zealand Banking Corp., said that while his bank's primary thrust is multinationals, it has participated in leveraged buyouts for smaller companies.

For the second year in a row, foreign banks increased their commercial lending at a faster rate than their U.S. counterparts — 8.1% for the foreigners versus 5.2% for the Americans. Overall, commercial and industrial loans grew 5.8%, the *American Banker* survey found.

The growth in lending was not accompanied by a corresponding increase in deposits. Foreign banks' U.S. deposits declined last year for the first time in the 1980s.

On June 30, their deposits totaled $255.3 billion, down 1.6% from 1985. Much of the drop was due to Midland's sale of the $16.4 billion-deposit Crocker to Wells Fargo & Co. last year.

Even without the Crocker sale, however, foreign banks' U.S. deposits would have grown at a slower pace than in past years. This is the first time in the 1980s that foreign banks did not increase their U.S. deposits by a double-digit percentage rate.

Foreign banks' deposits also declined as a percentage of total U.S. bank deposits — to 14.2% from 15.6%. During this same period, deposits for all U.S. banks increased 5.8%.

On June 30, assets of foreign banks in the U.S. totaled $468.1 billion, up 8.8% from 1985. The increase for all U.S. banks was 8.3%. Foreign banks hold 18.5% of all U.S. bank assets, just about unchanged from the previous year.

British banks, with a 36.2% decline in deposits and a 30.6% drop in assets, showed the biggest decreases in both categories. Swiss banks, with U.S. deposits up 9.6% and U.S. assets up 52.1%, had the biggest increases in both categories.

Hongkong and Shanghai

In terms of business loans, Hongkong and Shanghai Banking Corp., owner of 51% of Marine Midland Banks Inc., Buffalo, remains the largest foreign bank in the U.S. Hongkong and Shanghai, with $7 billion in U.S. business loans, maintained the lead position despite a 3.6% drop in business loans. The bank also led foreign banks in deposits and assets.

A pair of Japanese banks exchanged positions in the No. 2 and No. 3 spots. Bank of Tokyo Ltd., with $6.3 billion in U.S. business loans, moved up to No. 2, while Fuji Bank Ltd., with $6.2 billion in business loans, moved down to No. 3.

Midland Bank, which had been No. 4 in the previous rankings, dropped off the charts after the Crocker sale. Its place was taken by another London bank, National Westminster Bank. National Westminster's U.S. business loans rose 26.3% last year to $5.3 billion.

National Westminster was not the only foreign bank whose U.S. commercial and industrial loans rose at a double-digit percentage rate. Other big rises were scored by Istituto Bancario San Paolo di Torino, with 77.3%; Bank of Nova Scotia, with 71.6%; Sumitomo Bank, with 67.3%; Banco di Roma, with 58.6%; and Industrial Bank of Japan, with 46.6%. Industrial Bank of Japan last year acquired majority ownership of J. Henry Schroder Bank & Trust Co., New York.

The biggest percentage decline among the major foreign-owned banks was shown by European American Bank, a New York bank owned by a consortium of foreign banks. The bank reduced commercial loans by 23.9% and its ranking among foreign banks slipped to No. 19 from No. 11 the year before. European American has been shrinking its loan portfolio as part of a strategy of concentrating on Long Island, N.Y., business.

Other big declines in rank occurred at Banque Nationale de Paris, to 27th from 18th place; Royal Bank of Canada, to 17th from 13th; and Canadian Imperial Bank of Commerce, to 26th from 21st.

Large gains in rank were shown by Banco di Roma, moving up to 16th place from 24th; and Nippon Credit Bank Ltd., to 20th from 29th. ■

FSLIC's 1st-Quarter Sales Of Assets Are Up from '86

WASHINGTON — Asset sales by the Federal Savings and Loan Insurance Corp. have picked up during the first quarter of the year, according to data released this week by the FSLIC.

The FSLIC said it had sold 158 assets for $58.5 million so far this year, compared with 409 assets sold in 1986 for $125 million. The agency did not provide a 1986 first-quarter figure.

The FSLIC, which insures thrift depositors and handles liquidation of properties from closed thrifts, said the total value of the assets it holds as a result of thrift failures is $8 billion.

As of this week, the most valuable of the holdings is 123 acres of raw land about nine miles north of San Diego, known as Lake San Diego, at La Jolla, Calif. The asking price is $43 million — nearly $350,000 an acre.

Earlier, it was reported that the FSLIC, as a result of thrift failures, has 1,752 properties in 36 states. ■

Dear Reader, How Are We Doing?

The *American Banker* wants to make sure our statistical review of the top foreign banks in the U.S. meets your information needs. So would you spend a moment to give us some feedback? Please clip out this questionnaire and return to: William Zimmerman, Editor, American Banker, One State Street Plaza, New York, N.Y. 10004 (212) 943-5712.

The 1985 data are as reported in 1986 and have not been restated. In the edition of Feb. 26, 1987— Foreign Banks in the U.S.: Part 1— the 1985 data shown were for the offices for which data for both 1985 and 1986 were available. Average deposits and assets for June were used for branches and agencies; and balances as of June 30, were used for U.S. commercial bank subsidiaries, New York State investment companies, and Edge banks. For finance companies, data as of Dec. 31, 1985, and Dec. 31, 1984, were used. Acquistions made, and offices opened, after June 30, 1986, are not included here.

(a)—Annual growth in commercial and industrial loans over the year ended 6/30/86 and 6/30/85, respectively. Note-percent changes based on unrounded figures and will differ slightly from dollar figures shown. (b)— Acquired J. Henry Schroder Bank & Trust Co., New York, and J. Henry Schroder Banking Corp., New York, from Scroders PLC, London, in Dec. 1985. (c)—The group consists of six European banks: (1)-Amsterdam-Rotterdam Bank, Amsterdam, Netherlands; (2)-Creditanstalt-Bankverein, Vienna, Austria; (3)-Deutsche Bank, Frankfurt; (4)-Midland Bank Plc., London; (5)-Societe Generale de Banque, Brussels; and (6)-Societe General, Paris. (r)— Data and rank were revised by American Banker since publication on 2/14/86. (R)—Revised. (†)— Revised since publication on 2/26/87.

Crocker Sale's Impact on Survey

In February 1986 Midland Bank Plc. sold Crocker National Corp. to Wells Fargo & Co. The combination of the two San Francisco bank holding companies led to dramatic shifts in Foreign Banks survey results. In last year's survey, based on midyear 1985 data, the London-based Midland Bank ranked fourth among foreign banks with $4.5 billions in U.S. C&I loans. Crocker National Corp.'s major bank subsidiary was Crocker National Bank, San Francisco.

Midland Bank's U.S. Banking Operations ($ Mil.)

	Number of Offices	C&I Loans	Assets	Deposits
June 30, 1985	3	$4,519.9	$22,697.5	$16,423.7
June 30, 1986	2	$70.9	$1,675.9	$728.2

Crocker National Bank, San Francisco ($ Mil.)

	C&I Loans	Assets	Deposits

(a)— Average deposits and assets for June were used for branches and agencies, and balances as of June 30 for commercial banks, Edge Act banks, and New York Investment Companies. **(b)**— Commercial bank number count includes bank head offices only and does not include the branches of these banks. **(c)**— Edge bank number count includes branches. To avoid double counting, data for Edge banks, which are subsidiaries of foreign bank-owned U.S. commercial banks, are excluded from the totals for C&I loans, deposits, and assets. The 1985 loan figures for Edge Act banks are total loans. **(d)**— Yearend 1985 and yearend 1984 data were used for finance companies. **(e)**— Aggregate data on investment companies are from the Federal Reserve Board. **(f)**— Data for all U.S. banks are from the **Federal Reserve Bulletin.** **(g)**— The ratio is all U.S. offices of foreign banks to all U.S. banking offices. In computing the ratios, finance company data were subtracted out from the U.S. offices of foreign banks totals for comparability with Federal Reserve Board's aggregate data. **(1)**— All U.S. banks include domestically-chartered, FDIC-insured commercial banks, plus the U.S. branches and agencies of foreign banks, plus all Edge Act bank offices— head offices and branches— and New York State investment companies. Data on the total number of commercial banks were provided by the Federal Deposit Inscurance Corporation, Washington, D.C. See page 8 for a breakdown of U.S. banks by type. **(r)**— Revised since publication on 2/14/86. **(†)**— Revised since publication on 2/26/87.

Note: The 1985 data have not been adjusted for the sale of Crocker National Bank, San Francisco, by Midland Bank PLC, London, to Wells Fargo Bank NA, San Francisco. Thus, 1986 growth is understated for foreign-owned U.S. banks and overstated for U.S. owned U.S. banks. **(1)** — Foreign banks' U.S. banks include: commercial bank and Edge bank subsidiaries; branch and agency offices; and New York investment companies. Finance companies are excluded. **(2)**— U.S.-owned U.S. banks include all commercial banks and Edge banks in U.S. that are not owned by foreign banks. **(r)**— Revised since publication on 2/14/86. Data for this table are calculated by American Banker using its data of foreign banks in the U.S. and the Federal Reserve Board's aggregate data on all banks in the U.S.

Summary of Survey Findings

(Continued on Page 18)

Compiled from data taken from the Federal Reserve Board's report of assets and liabilities of U.S. branches and agencies of foreign banks for June 30, 1986. C&I loans are commercial and industrial loans as of 6/30/86. Assets and deposits are average balances for the 30 day period ended June 30, 1986. (a)— Converted to a representative office in Oct. 1986. (f)—Has 2 branches in New York. (h)—This branch is not FDIC-insured. (j)—Consolidated data for 3 FDIC-insured branches. (k)—Has 3 branches in New York. (m)—An agency under state law, but considered a branch by Federal Reserve because it has special powers, granted under New York state law, to issue large denomination deposits to both foreign and domestic residents. (s)—Includes branches in Christiansted and Frederiksted. (t)—Includes branch in St. Thomas. (x)—Has a international banking facility (IBF) office. (H)—Office is located in the bank's "home state."

U.S. Branches of Foreign Banks

Listed Alphabetically, Within City, With C&I Loans, Assets, and Deposits June 30, 1986, Compared with June 30, 1985 (Dollar Figures in Millions)

(Continued on Page 26)

Compiled from data taken from the Federal Reserve Board's report of assets and liabilities of U.S. branches and agencies of foreign banks for June 30, 1986. C&I loans are commercial and industrial loans as of 6/30/86. Assets and deposits are average balances for the 30-day period ended June 30, 1986. (a)—Under New York State banking law, some agencies have been granted power to issue large denomination deposits to both foreign and domestic residents. For that reason, the Federal Reserve considers these agencies as branches. American Banker also classifies these agencies as branches. In the listing of New York branches, these special agencies are identified with a footnote "m". (x)— Has a international banking facility (IBF) office. (H)—Office is located in the bank's "home state."

The listing today incorporates corrections and revisions to that original listing. **Total capital funds** is the sum of shareholders' equity plus noncurrent subordinated debt. **The capital funds rank** is the company's rank among all finance companies in the U.S. on Dec. 31, 1985.

Definitions and Data Sources Used In Statistical Listings of Foreign Banks

American Banker's study of foreign banking in the United States shows the business loans (commercial and industrial loans), deposits, and assets of the U.S. banking offices of foreign banks as of June 30, 1986.

Sources of the data are given here as well as in the footnotes of the tables. Definitions of the various terms used in the study are presented below.

Full banking offices of foreign banks include commercial bank subsidiaries, branches, agencies, Edge Act banks, New York State investment companies, and finance company subsidiaries.

According to the International Banking Act of 1978, an agency is "any office or any place of business of a foreign bank located in any state of the United States or District of Columbia at which credit balances are maintained, checks are paid, or money is lent, but at which deposits may not be accepted from a citizen or resident of the United States."

A branch is defined as "any office or any place of business of a foreign bank located in any state of the United States or District of Columbia thay may accept domestic deposits that are incidental to, or for the purpose of, carrying out transactions in foreign countries."

In New York state, a large number of agencies of foreign banks have been granted powers by the state to issue large-denomination deposits to both domestic and foreign residents. For that reason, *American Banker* follows the Federal Reserve Board's policy of classifying these agencies as branches. These agencies are listed in the branch listing and are identified by a footnote "m" after their name.

The source of the branch and agency data is the Federal Reserve Board's Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks (FFIEC 002), a quarterly report that these institutions are required to submit to the Fed.

According to the Fed's instructions, each branch and agency is required to file a separate report, unless there is more than one such office in the city. If a foreign bank has more than one branch or agency office in a city, one consolidated report may be filed.

An Edge Act banking corporation is a nationally chartered organization set up to engage in international banking and investment, under the rules established in the 1919 Edge Act. The International Banking Act of 1978 permitted foreign banks to establish Edge banking offices.

An Edge bank can make loans, accept deposits, and provide a wide range of banking services, but all of these must be directly related to foreign or international transactions.

The source of the Edge bank data is a the Federal Reserve Board's Report of Condition for Edge and Agreement Corporations (FR2886B). These are unconsolidated data for the Edge and for each domestic branch of the Edge.

An investment company, which is established under Article XII New York State banking law, is similar to a state-chartered commercial bank. However there are three major differences: (1) an investment company is not subject to the 10% lending limitation, while a commercial bank cannot lend to any one person an amount greater than 10% of its capital stock, surplus, and undivided profits; (2) an investment company has no restriction on investing in stocks of corporations, while banks cannot acquire the stock of any corporation; and (3) an investment company cannot accept deposits, but can only maintain credit balances incidental to the conduct of its lawful business. Only investment companies more than 50% owned by foreign banks are included in the listings.

American Banker was unable to obtain data for investment companies from the Federal Reserve Board this year. Therefore, *American Banker* contacted the 11 firms directly for data. Only five have responded to this request. The source of the 1985 investment company data was the Federal Reserve Board.

The data for most of the commercial banks were provided to the *American Banker* by the banks. When banks did not provide data, ADP Data Services, New York, provided the data from their data base of commercial banks, which is based on the Federal Reserve's computer tape of the Consolidated Report of Condition for a Bank and Its Domestic and Foreign Subsidiaries (FFIEC 014), or "call report" for June 30, 1985.

Commercial and industrial loans are defined as loans for commercial and industrial purposes to business enterprises (proprietorships, partnerships, and corporations), whether secured or unsecured, single payment or installment. These loans may take the form of direct or purchased loans, such as commercial paper or bankers acceptances.

For commercial banks, data are consolidated, including these banks' domestic and foreign branches and their Edge bank subsidiaries.

Rise in Primary Capital Outpaces Assets

Loss Provisions For 1986 Cited

By L. MICHAEL CACACE

NEW YORK — Primary capital increased more than twice as fast as assets at the nation's top 10 banking companies again last year, according to an *American Banker* survey.

Primary capital jumped 15.8%, while assets rose 7.8%, the survey found. In 1985, primary capital rose by 16%, compared with a 7.5% gain in total assets.

The faster growth in capital last year was due to the sharp rise in the allowance for loan and lease losses. That allowance, which makes up more than 17% of primary capital at the top 10 firms, jumped 30.7%.

The sharp rise in the allowance last year was caused, in part, by the changes in federal tax laws. The year 1986 was the last in which additions to the loan-loss reserve were at least partially deductible for banks with over $500 million in assets. This made additions to the loan-loss reserve very attractive in the fourth quarter.

Meanwhile, at the nation's top 100 banking companies, as ranked by primary capital, primary capital rose 15.7%, while assets rose 10.3%. In 1985, primary capital rose 19% at these firms, compared with an 11% increase in assets.

These are some of the findings of the *American Banker*'s annual bank holding company review published today.

The review consists of five major statistical listings: the top 100 bank holding companies in total assets on Dec. 31, 1986; a geographical breakdown of the top 100 companies, showing their total assets and employees at yearend; the top 100 bank holding companies in primary capital; the top 100 banks and bank holding companies in net income for 1986; and a list of the nonrecurring income items included in the earnings reported by the top 100 firms in net in-

House Panel Clears St Germain in Ethics Probe

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — The House ethics committee, while citing minor violations of House rules, has largely cleared Banking Committee Chairman Fernand J. St Germain, D-R.I., of charges that he abused his office for private gain.

In a 1,405-page report released Wednesday, the ethics committee pointed to a number of minor infractions, such as deficiencies in his required financial disclosures and the acceptance of one free airline ride that violated House rules about taking gifts.

In addition, the report suggested that at least one episode — involving repeated inquiries by Mr. St Germain's staff about a thrift industry application before the Federal Home Loan Bank Board — left an inference of improper activity. The committee, however, decided it "would be inappropriate to attribute improper action to an individual based solely on inference."

The panel, formally known as the House Committee on Standards of Official Conduct, did not recommend further action, and its report apparently closes the matter.

Mr. St Germain, who is vacationing in Florida with his family, issued a

Where a holding company has more than one bank, only the lead bank is shown. The lead bank is the company's largest bank as measured by total deposits on 12/31/86. **Assets** and **Deposits** include all consolidated subsidiaries. The 1985 data are as reported in 1986, and are not adjusted for 1986 merger and acquisition activity. **Banks Controlled** includes only domestic banks controlled, according to definitions of Bank Holding Co. Act. **Branches Controlled** are domestic only.

Primary Capital Grew Twice as Fast as Assets Again in 1986

➔ Continued from Page 1

come. (The review begins on page 7.)

Primary capital is the sum of total shareholders' equity capital (perpetual preferred stock, common stock, surplus, and undivided profits and capital reserves), mandatory convertible instruments, the allowance for possible loan and lease losses, and minority interest in equity accounts of consolidated subsidiaries.

Mandatory convertible instruments are subordinated debt that eventually is transformed into common or perpetual preferred stock within a specified time not to exceed 12 years. Mandatory convertible debt includes equity contract notes and equity commitment notes issued prior to May 15, 1985.

According to the Federal Reserve Board, adequate capital "provides a buffer for individual banking organizations in times of poor performance, helps maintain public confidence in particular banking organizations and the banking system, promotes the safety of depositors' funds, and supports the reasonable growth of banking organizations."

For the top 10 firms, primary capital totaled $58.6 billion on Dec. 31, 1986, up 15.8% from $50.8 billion a year earlier. The allowance for the loan and lease losses component of primary capital totaled $10.1 billion, up 31% from $7.7 billion a year earlier. The total shareholders' equity component was $38.1 billion, up 11.7% from $34.1 billion, and mandatory capital notes were up 15.5%, to $10.4 billion from $9 billion.

For the top 10 firms, total shareholders' equity made up 65% of primary capital at yearend 1986, down from 67.1% the year before. The allowance for loan and lease losses accounted for 17.2% of primary capital at yearend, compared with 15.2% a year earlier, and mandatory convertible capital notes made up 17.7% of primary capital, the same percentage as the year before.

For the top 100 firms, primary capital totaled $139.4 billion, up 15.7% from $120.5 billion a year earlier. And total capital was $178.2 billion, up 17.3% from $151.9 billion the year before.

Total capital is primary capital plus secondary capital. Secondary capital is the sum of limited-life preferred stock and subordinated notes and debentures and long-term debt with an original maturity of seven years or more.

For the top 10 firms, the ratio of primary capital to total assets rose 46 basis points last year, to 7.10% at yearend from 6.64% the year before. For the top 100 firms, the ratio of primary capital to total assets rose 33 basis points last year, to 7.22% at yearend from 6.89% the year before.

Primary Capital Leaders

December 31, 1986 (In Millions)

1. Citicorp	13,490
2. BankAmerica Corp.	7,361
3. Chase Manhattan Corp.	6,661
4. J.P. Morgan & Co., Inc.	6,407
5. Manufacturers Hanover Corp.	5,396

Other Survey Findings

The *American Banker* surveyed the 200 largest bank holding companies and banks in the United States to prepare today's rankings. Listed below are some of the more important findings.

- Total assets of the top 100 bank holding companies was $1.93 trillion on Dec. 31, 1986, up 10.3% from $1.75 trillion a year earlier.
- These top holding companies had $1.33 trillion in deposits, up 10.2% from $1.21 trillion on Dec. 31, 1985. They also controlled 1,428 domestic banks with 20,739 domestic branches at yearend 1986.
- The top 100 earners among banks and bank holding companies had combined net income of $13 billion in 1986, up 15.2% from $11.3 billion a year earlier.
- Included in the net income of the top 100 earners last year was $954 million in nonrecurring items, compared with $497 million in 1985. That category includes such items as the sale of buildings, branches, and subsidiaries; venture capital profits; and pension settlement gains. Net income for the top 100 firms, when adjusted for nonrecurring items, was up 11.7% in 1986.
- Among the top 100 earners, Boston Safe Deposit & Trust Co. had the largest percentage gain in net income, 123%. ■

Dear Reader, How Are We Doing?

The *American Banker* wants to make sure our annual bank holding company review meets your information needs. So would you spend a moment to give us some feedback? Please clip out this questionnaire and return to: William Zimmerman, Editor, American Banker, One State Street Plaza, New York, N.Y. 10004 (212) 943-5712.

Where a holding company has more than one bank, only the lead bank is shown. The lead bank is the company's largest bank as measured by total deposits on 12/31/86. Assets and Deposits include all consolidated subsidiaries. The 1985 data are as reported in 1986, and are not adjusted for 1986 merger and acquisition activity. **Banks Controlled** includes only domestic banks controlled, according to definitions of Bank Holding Co. Act. **Branches Controlled** are domestic only.

Top 100 U.S. Bank Holding Companies

Primary capital is the sum of total shareholders' equity; mandatory convertible debt; allowance for possible loan and lease losses; and minority interest in equity accounts of consolidated subsidiaries. Total capital is primary capital plus secondary capital. Secondary capital is limited-life preferred stock plus qualifying debt. The primary capital ratio is calculated by dividing primary capital on Dec. 31 by total assets on Dec. 31, expressed as a percentage. Note: The American Banker ratio is not calculated in the same manner as the Federal Reserve Board ratio. The American Banker does not add back the allowance for possible loan and lease losses to total assets, as the Fed does. Therefore, for most of the firms listed, the American Banker ratio will be from 5-to-12 basis points higher than the Fed ratio, depending on the size of the bank's allowance for possible loan and lease losses. N.A.— Not available.

Top 100 Earners in Banking

Banks and Bank Holding Companies Ranked by 1986 Net Income

Top 100 earners based on net income for banks and bank holding companies. **Net income** is income after taxes and minority interest, but before preferred dividends, extraordinary items, and significant and unusual transactions. The 1985 net income is as reported in 1986 and has not been restated. **Adjusted net income** is net income for certain non-recurring items such as: gains (losses) from sales of buildings, branches, subsidiaries, securities sold to settle loans or debt, proceeds from equity/debt swaps, and other nonrecurring items such as venture capital profits (losses). All nonrecurring items, which are subtracted from net income, are on an after-tax basis, wherever possible (†)— Some or all of the nonrecurring items were reported on a pre-tax basis. **Return on Assets** is the return on average assets. **Return on equity** is the return on average (total) equity capital, whenever possible. (★)— Return on common equity capital. (*)— Calculated by American Banker. (c)— A multibank holding company. (d)— A one-bank holding company. (e)— Became a one-bank holding company on 1/1/87. (m)— A subsidiary of Boston Co. Inc., which in turn, is a subsidiary of Shearson Lehman Brothers. (r)— Revised since publication on 2/2/87.

1986 Net Income is income after taxes and minority interest, but before preferred dividends, extraordinary items, and significant and unusual transactions. **Pension settlement gains** are the gains attributable to Financial Accounting Board's Statements 87 and 88. These statements permit a company to settle all or part of its pension obligations and recognize a part of its excess pension fund assets as income without terminating the plan. **Total adjustments** are the sum of all non-recurring items included in net income, on an after-tax basis, whenever possible. **1986 Adjusted Net Income** is 1986 net income minus total adjustments. (1)— Includes a $30 million special addition to the Provision for Possible Loan Losses and a $15 million one-time expense related to selective reductions in Chase's domestic and overseas office network. (2)— Sales proceeeds in excess of equipment lease residual values. (3)— Gain on the sale of investment. (4)— A net loss on hedging transactions. (5)— The net loss is composed of two items: an after-tax loss of $7.8 million attributable to unauthorized trading by a foreign exchange dealer at Mellon Bank NA's Tokyo branch; and net non-recurring revenue of $1.1 million from various sources. (6)— Includes sale of branches in New York State and sale of real property on Wall Street. (7)— The gain on sale of venture capital securities. (8)— Includes a $10.9 million pre-tax gain on the final settlement for losses related to a major fire in 1982 and a $9.2 million decrease in income tax expense (on an after-tax basis) on leveraged lease income due to the Tax Reform Act of 1986. (9)— Merger costs. (10)— Includes gain on sale of equity and gain on sale of property. (11)— Not identified by the firm (12)— Redemption by Old National Bancorporation of its preferred stock. (13)— Gain attributable to change in Federal tax laws with respect to net investment in leveraged leases. (14)— Gain on sale of 80% of partnership interest. (15)— The bulk of the gain is attributable to pension settlement. (16)— Included in non-interest income for 1986 was a $4.686 million pre-tax recovery from the $8.008 million reserve established in the fourth quarter of 1985 against the value of uncleared customer items remaining from earlier operational difficulties. (†)— On a pre-tax basis, data on an after-tax basis were not available. ( )— Indicates a net loss.

Discover Card Could Make Sears Largest Issuer

By LISABETH WEINER
Midwest Bureau

CHICAGO — Sears, Roebuck and Co. is close to surpassing Citicorp to become the nation's largest issuer of revolving bank credit cards.

Credit Cards

Sears disclosed this week that its Dean Witter Financial Services Group has 15 million Discover cards in circulation, up from 11.5 million at yearend 1986.

Only 15 months after its national launch, Discover is closing in on Citicorp's industry-leading bank card total, which experts estimate at between 15 million and 16 million MasterCard and Visa cards combined.

Discover cards are not often compared with bank cards because they are

Merrill Ta [illegible] In Mortgage Securities Trading

By JED HOROWITZ

NEW YORK — Merrill Lynch & Co. announced Wednesday it has lost $250 million from trading mortgage-backed securities and said it has fired a senior trader held partly responsible.

The company is the first victim of the recent jump in interest rates that has sparked rumors of trading losses throughout Wall Street.

However, Merrill blamed the loss in part on "significant unauthorized activity" by Howard A. Rubin, a vice president and mortgage-backed securities trader, as well as on market volatility.

A Merrill spokesman would not comment on how much of the loss was due to any unauthorized trading. Mr. Rubin could not be reached for comment.

Analysts who attended a meeting at Merrill on Wednesday said the pretax loss occurred on $1 billion of Government National Mortgage Association securities that Merrill marked down to $750 million.

Merrill had purchased $500 million of the Ginnie Mae securities and converted them into strips. In a strip, a firm separates the interest portion of a security from the principal, auctioning each off separately. Merrill sold the interest portion quickly, but was stuck with the principal-only portion because of low liquidity and rising interest rates, analysts said.

The remaining $500 million of the position was purchased without authorization by Mr. Rubin, according to analysts who were briefed by Jerome P. Kenney, head of Merrill's capital markets division.

Sources in the mortgage-trading department said Mr. Rubin was suspended Monday and fired Wednesday.

Mr. Rubin's responsibilities in mortgage-backed trading had been broadened earlier this year to include trading collateralized mortgage obligations and government agency securities. Mr. Rubin was the sole employee to be dismissed over the loss, according to

Brazil Toll at 25 Banks: $15.6 Billion of Loans Reclassified

By LISABETH WEINER
Midwest Bureau

AN **American Banker** SPECIAL REPORT

CHICAGO — Twenty-five of the largest U.S. bank holding companies put more than $15.6 billion worth of medium- and long-term loans to Brazil on nonaccrual status during the first quarter, according to an *American Banker* survey.

This means that interest on the debt will be recorded only at the time payment is actually received.

The loans these banks put on nonaccrual represent about 70% of the banks' total loans to that country.

During the first quarter, the same banks also put nearly $1.4 billion of Ecuadoran loans on a cash basis, according to the survey. The decision to put the Ecuadoran loans on nonaccrual status followed news of an earthquake that ravaged oil pipelines in that Latin American country. Oil is a major source of Ecuador's revenues.

As a result of these two actions, first-quarter earnings for these banks were reduced by $253 million, according to the survey. Full-year earnings for all the banks could be clipped by about $912 million unless Brazil negotiates a new credit agreement with its more than 700 creditor banks by yearend.

After U.S. regulators reclassified the Brazilian debt as substandard, most banks, though not all, put their medium- and long-term debt to that country on a nonaccrual, or cash, basis.

For many banks this action increased the level of first-quarter nonperforming loans, and in some cases resulted in lower first-quarter earnings.

For the largest U.S. bank creditors to Brazil, these non-

Brazil Toll: $15.6 Billion of Bank Loans Reclassified

Continued from Page 1

performing loans also represent a sizable percentage of shareholders' equity. For Citicorp, the $3.8 billion of Brazilian debt placed on nonaccrual is about 40% of shareholders' equity. At Chase Manhattan Corp., $2.3 billion of nonperforming Brazilian debt is slightly more than 50% of $4.3 billion in shareholders' equity recorded at the end of the first quarter.

Meanwhile, bankers have expressed high levels of frustration with Brazil's unilateral decision on Feb. 20 not to remit interest payments on its foreign debt, an action described as severe and extreme. What may differentiate these negotiations from other Latin American credit restructurings of the past is that the bankers are likely to demand that a realistic and flexible plan be devised.

'A Pemanent-Temporary Solution'

"We see the Brazil debt being resolved this year. But it will be a permanent-temporary solution," said William King, vice president and research director for McCarthy, Crisanti & Maffei Inc. "There are serious long-term problems in Latin America. Brazil is in the limelight now, but who will be next?"

Mr. King is confident that the Brazilian debt situation will be resolved in 1987 and that the loans will, at least to some degree, return to a performing basis. "The debt is so large and there is so much political pressure that we just expect that somehow it will be worked out," he added.

Perhaps the most encouraging news supporting that position may be the resignation earlier this week of Brazilian Finance Minister Dilson Funaro, who instituted the debt moratorium. His replacement, economist Luiz Carlos Bresser Pereira, is likely to seek a compromise in foreign debt negotiations.

And the banking community seems optimistic that a renegotiated settlement will be reached before year's end.

At a press conference earlier this month, First Chicago Corp. chairman Barry Sullivan said it is probable that the debt renegotiations will be accomplished in 1987. "I don't think it's a sure thing, but I think it's probable."

Brazil Resists Scrutiny

Mr. Sullivan, who met with the former Brazilian finance minister in early April, sees two issues confronting Brazil. The first is Brazil's unwillingness to subject itself to external scrutiny and a program of monitoring. While this has been "very central" to debt negotiations with other countries, Brazil is resisting it, he said. The second issue is finding new, flexible instruments for the banks that will give the creditors more options in dealing with the restructured debt.

"I don't doubt the will of Brazil, which is to refinance," Mr. Sullivan said. "Brazil needs, in that refinancing, some new money, and they need the new money because they want to keep the plant and equipment up to date. They have a heck of an incentive to renegotiate, but they want to do it on a basis that they [can] live with longer-term," Mr. Sullivan said.

Meanwhile, U.S. bank regulators would like to be optimistic that an agreement with Brazil will be negotiated this year. But one source said a more likely scenario is that U.S. creditors may receive a kind of good-faith payment from Brazil. "My guess is," he said, "that in the second half of 1987 the banks will receive interest payments from Brazil. . . . It will not be enough to take the loans off nonaccrual status, but it will be enough to recapture some interest income."

Neal Farrell, vice chairman of Mercantile Bancorp., said the one thing differentiating the Brazilian debt situation from that of other Latin American countries is that Brazil is not destitute and does have the money to meet its interest obligations; it has just chosen not to remit payment. "The money owed is being kept in Brazil. This difference is a fine line, but it's an important line," Mr. Farrell said.

Unhappy Bankers

What is clear at this point, Mr. Farrell said, is that "all of the U.S. banks have been materially hurt by lower earnings, and the impact is hitting home to Brazil that there are unhappy bankers and unhappy shareholders out there." St. Louis-based Mercantile put $66.1 million of Brazilian loans and $3.1 million of Ecuadoran loans on nonaccrual status, which reduced first-quarter earnings by $798,000.

The extent of this unhappiness is being made known by a growing number of regional bankers who want to reduce their Latin American debt exposure. They are not eager to throw good money after bad — that is, to cough up additional new loans that might be mandatory under a restructuring but that might not resolve the country's long-term economic plight. Even Citibank has started to balk at granting concessions to some debtor countries.

In the past, Mr. Farrell said, debt restructurings have been negotiated by a steering committee made up of money center banks that simply told the smaller banks how much would be required in new money loans. A lot of people felt then that they were just throwing good money after bad, he said. "Then we found two years later we were doing it again, like a treadmill. It became the ultimate treadmill," he added.

Regionals Speak Out

The money center lenders to Latin American have made very little effort to get the smaller banks to participate in the restructuring talks in the past, Mr. Farrell said. "Regional bankers don't have time and we don't have a staff of officers who can get involved in a steering committee, so it's probably impractical on a day-to-day basis."

But the regional banks are getting more vocal in letting the Latin American countries and the money center banks know where they stand with regard to restructured debt.

"We're not clamoring to leave Brazil or Mexico totally," Mr. Farrell said. "We have done business there for 75 years and it was good, strong business for many years. But we have to find a way of working with them. The pressure is on to find a sensible way of dealing with the situation."

Smaller banks are intrigued with a number of new techniques that have been mentioned as a way for them to reduce their exposure to Brazil in a renegotiated debt accord. For instance, while it may not be the most lucrative option, there is a thinly traded market for the sale of Latin American credits. Currently that market is paying about $0.62 for each dollar of Brazilian debt and $0.55 for each dollar of debt to Mexico.

Debt-for-Equity Swaps

Another alternative some banks have explored is a debt-for-equity swap, which essentially allows a creditor to trade a certain amount of debt for an equity position in a Brazilian company.

Michael Moore, who heads Latin American business for Norwest Corp., Minneapolis, said earlier this month that his bank traded $12.5 million of Brazilian debt for a 14% interest in a Brazilian paper company. Mr. Moore termed it a "great deal" because it allows Norwest to continue doing business in Brazil while reducing its exposure. And that supports his contention that despite the current round of problems, there is an underlying economic strength in Brazil.

A recently negotiated debt restructuring with Argentina has in fact implemented such innovations as debt-for-equity swaps, and may become a model for future Latin American debt restructurings. "This Argentina negotiation," one regulator said, "may be the threshold for negotiating a menu of alternatives that satisfies the portfolio preference of very small regional or [superregional] banks."

One major point of contention has been using a bank's 1982 loan exposure level as the base for determining the amount of money to be put into a new credit agreement. In the Argentina accord the base date will be adjusted to account for debt that has been forgiven or debt that has been swapped into equity.

"It's more realistic to use a current base rather than a 1982 base," said Mr. Farrell of Mercantile. "Nobody feels good about putting up additional money based on losses that have already been sustained by your organization."

Using this menu approach for debt negotiations has been widely proposed by people like William Cline, an international debt expert from the Institute for International Research. "What you want to do here is tailor the vehicle to meet the interest of the particular bank."

A United Front

Meanwhile, negotiating the Brazilian and future Latin American debt will get more difficult, especially as each country hopes to improve upon the terms given to one of the other countries. "Banks have to stick together," said Mr. King of McCarthy, Crisanti & Maffei. "Banks have to try as best they can not to give in to each new demand that is more favorable than the previous demand, or it will just be a continuous cycle. Banks have simply got to stand together and say no, we're not going to provide any more favorable terms than you've got now."

While some of that "stick-togetherness" may be waning as regional banks and even Citibank have expressed an unwillingness to just hand out new money on restructured loans, the effect of this has been offset by the inability of the Latin American countries to form a debtors' cartel. "There are some very nationalistic feelings in the Latin American countries," Mr. King said. "Each country thinks maybe he's better than the guy next door and should get better terms."

While some bankers have expressed concern that other Latin American countries may attempt to mimic Brazil's action, Mr. Farrell does not expect that to happen. "Other Latin countries have disassociated themselves from Brazil's course of action. It was severe and extreme, and Brazil alienated itself," he said. "Brazil played the ultimate trump card. But the next move belongs to the banks." ■

Source: Company earnings reports. [1] Full year impact is estimate by American Banker. [2] Projection of full-year impact covers Brazil only. [3] Ecuador exposure not disclosed. [4] Loans not placed on nonaccrual status until payment of principal or interest is 90 days past due. At March 31, Marine's total loans to borrowers in Brazil were $620.9 million, of which $4.3 million were on nonaccrual status. About $348.4 million of Marine's Brazilian loans are medium- or long-term. Because of uncertainty over the Brazilian loans, Marine has established a special reserve against interest due on the medium- and long-term loans. This resulted in a pretax provision of $9.7 million, which reduced first-quarter earnings by $5.7 million. [5] After-tax figures not available. Pretax impact of Brazilian loans was $8 million in the first quarter. Impact for the year is estimated at $25 million. The effect from Ecuador is insignificant. [6] Effect on earnings negligible.

Corrections

An article on April 29 ("Branch Banking Sweeps Texas in Challenge to State Officials," page 1) incorrectly reported the number of banks in Texas. The correct number is 1,900.

□

An article on April 28 ("Merrill Offers Two Issues of Japanese Bank Deposit Notes," page 16) incorrectly identified one of the issuing banks. The institution involved is Sumitomo Trust & Banking Co. Ltd., New York, not Sumitomo Ltd. ■

3 from Morgan Among Top Paid

By KENNETH J. HICKS

NEW YORK — J.P. Morgan & Co. became the first banking company to pay its two top executives more than $1 million each in a year.

In fact, the top three executives at Morgan — Lewis T. Preston, chairman; Robert V. Lindsay, president until Dec. 31, 1986; and Dennis Weatherstone, president since Jan. 1 of this year — each made more than $1 million in 1986, and each ranked among the 10 highest-paid executives in the banking industry.

These are some of the findings of the *American Banker's* annual survey of executive remuneration at the nation's top 50 banking firms. The rankings are based on the combined remuneration of the two highest paid officers of the firm. The survey also identifies the 10 highest paid executives in banking.

Executive remuneration, as defined by the *American Banker*, is total compensation — whether current or deferred — paid or credited for services during 1986 to the two highest paid officers of a company. Included are salary, bonus incentive payments, profit sharing, and all other remuneration related to 1986 services. Excluded are pension and retirement plan payments, stock options exercised, stock appreciation rights, and contingent, long-term

Fed's Ruling Not Clear-cut Bank Victory

Decision on Underwriting Leaves Industry Worried

By JED HOROWITZ

NEW YORK — Bankers are more concerned than relieved by the Federal Reserve Board's approval of underwriting powers for three major banks. Particularly worrisome, they said, is the dissent in the 3-to-2 decision by Fed Chairman Paul A. Volcker and Governor Wayne Angell.

The dissent is likely to provide strong legal ammunition to groups opposed to new bank powers. On Friday, less than 24 hours after the board's approval, the Securities Industry Association filed suit in the U.S. Court of Appeals for the Second Circuit in Manhattan to overturn the decision.

The trade group simultaneously asked the Fed to stay its approval, pending the judicial review. A Fed spokesman said it was studying the request.

Matthew Fink, general counsel of the Investment Company Institute, said the mutual fund trade association is almost certain to join in the SIA suit.

"It is somewhat encouraging that Federal Reserve Board Chairman Paul Volcker and Governor Wayne Angell dissented from the decision," said SIA president Edward I. O'Brien. "In essence, they agreed with SIA's position concerning the prohibition of bank affiliates underwriting securities. They

BUSINESS AND FINANCIAL LAW
IN ENGLAND TODAY

September 6–19, 1987

This conference for attorneys, investment bankers, and security analysts consists of one week in residence at Cambridge with lectures by the distinguished law faculty who trace the history of the business, financial, and legal environment through the Financial Services Act of 1986. The second week in London includes lectures and special field trips to major British legal and financial institutions.

For further information call UCLA Extension/Legal Programs at (213) 825–0741.

* — Includes total dollar amount of salary, bonus or incentive payments, profit sharing, and all other remuneration (such as insurance premiums, club membership fees, and tax service fees paid by the corporation for the executive), whether current or deferred, attributable to services in 1986. Excluded are pension plan payments or accruals; stock options exercised; contingent, long-term performance awards; and amounts expensed as compensation arising from stock appreciation rights.

J.P. Morgan Takes Top Spot in Survey Of Bank Executives' Compensation

➛ Continued from Page 1

bonus payments.

Long-term incentive pay is excluded because it is contingent on the executive's performance over an extended period — generally two or three years. For the first time, however, bank executives who received long-term incentive payments during the year are listed, in a table on page 26.

The combined compensation given by Morgan to its two highest paid executives last year — Mr. Preston and Mr. Lindsay — was up almost 20%, to $2.6 million from $2.2 million in 1985. This gain enabled Morgan to maintain its No. 1 ranking for the third consecutive year.

Mr. Preston also maintained his title as the highest paid executive in banking, earning $1.49 million for services rendered in 1986, up 19.5% from $1.25 million in 1985. Mr. Lindsay was the eighth highest paid banker last year, earning $1.12 million, up 19.7% from $939,000 in 1985, when he ranked seventh in remuneration. Mr. Weatherstone again ranked as the nation's ninth highest paid bank executive last year, earning $1.1 million, up 24.5% from the $890,000 he earned as chairman of the executive committee in 1985.

Morgan is the fourth largest bank holding company in the nation, with assets of $76 billion. In addition, Morgan ranked second in earnings among banking firms, with net income of $872.5 million in 1986, up 24% from $705.4 million the year before.

Overall, most bank holding companies performed well relative to other segments of the business community. Deregulation has made it easier for banks to compete and given them more means to earn money.

Jacques P. Andre, senior vice president at Paul R. Ray & Co., a New York-based executive search firm, noted that more commercial banks have been active in investment banking. With the financial markets showing strength for the greater part of 1986, most of the bank holding companies had positive financial results.

"The financial services industry did very well in terms of financial results, especially investment banking . . . and so far the prognosis is strong for this year," Mr. Andre said.

Texas Drops from List

He also pointed out that "commercial bank performance was mixed, depending on loan losses" connected with energy and foreign lending.

This is illustrated by the disappearance of Texas bank holding companies from the rankings. Last year, there were three Texas holding companies in the survey, including RepublicBank Corp., which ranked ninth. In 1984, four of the holding companies appeared in the listing.

Other Salary Tables
Pages 22, 24, 26

Superregional bank holding companies continue to move up in the rankings of the top banking firms in executive compensation. Ten of the top 20 companies in remuneration were superregionals in 1986, compared with seven in 1985 and six in 1984. Executive pay was up 17.7% for the 24 executives of the superregional firms in today's survey, compared with a 15.7% gain for the 76 executives from nonsuperregional banking companies.

Of the 10 highest paid bankers, nine received over $1 million, compared with only three in 1985 and one in 1984. As in 1985, seven of the 10 highest paid bank executives were with New York-based firms. Carl E. Reichardt, chairman of Wells Fargo & Co., replaced Richard J. Flamson 3d, chairman of Security Pacific Corp., as the highest paid banker outside New York. Mr. Reichardt's compensation of $1.2 million made him the third-highest-paid bank executive.

Among the top 50 firms in remuneration, 49 paid their top two executives more than $1 million in combined salaries and bonuses for 1986 services. In 1985, 36 of the top 50 firms paid their two top executives over $1 million, and in 1984, only 23 did so.

Long-Term Incentive Pay

Dean E. Richardson, chairman of Manufacturers National Corp., Detroit, received the highest long-term incentive pay in 1986: $354,375. He was followed by Daniel P. Davison, chairman and CEO of U.S. Trust Corp., New York, with $339,226; Alfred Brittain 3d, chairman of Bankers Trust New York Corp., $300,000; Walter V. Shipley, chairman of Chemical New York Corp., $287,625; and Gerald V. MacDonald, president Manufacturers National Bank of Detroit, $275,625.

CoreStates Financial Corp. was the only major bank holding company that did not provide the *American Banker* with information on executive compensation. In last year's rankings, CoreStates ranked 35th in executive remuneration. ■

Executive remuneration, as defined by American Banker, is total compensation — whether current or deferred — paid or credited for services during 1986 to the two highest paid officers of the organization. **Included are the following:** salary, bonus and incentive payments, profit sharing, and all other remuneration such as insurance premiums, club membership fees, and tax service fees paid by the corporation for the executive. **Excluded are the following:** pension plan payments; retirement plan payments or accruals; stock options exercised; stock appreciation rights; and contingent long-term bonus payments which are based on the company's performance for a period greater than one year. The American Banker ranking is based on total remuneration paid to the top two executives of the company. The corporation's rankings for both 1986 and 1985 are shown to the left of the corporation's name. Total remuneration for the top two executives, for both 1986 and 1985, is reported to the nearest dollar in the column entitled **"Top Executive Remuneration"**. The compensation paid for executives number one and number two for both 1986 and 1985 appear in the column entitled **"Individual Remuneration."** All footnotes that are relevant to the compensation figures reported for each executive— except those dealing with long-term incentive awards— appear in the column labeled **"Notes"**. Footnotes which refer to 1986 data are capitalized and footnotes referring to 1985 data are lower case. The titles shown for the executives are those for which they received compensation, excluding directorships. **Title abbreviations:** CAO— Chief Accounting Officer; CEO— Chief Executive Officer; CEx— Chairman of the Executive Committee: Ch— Chairman of the Board; CM— Chairman of the Management Committee; COO— Chief Operating Officer; DCh— Deputy Chairman of the Board; EVP— Executive Vice President; HC— Holding Company; Pr— President; Sec— Secretary; SE— Sector Executive; SEVP—Senior Executive Vice President; SrCh—Senior Vice Chairman of the Board; Tr— Treasurer; VC— Vice Chairman; and VP— Vice President. **NOTES: G,g—** Includes latest salary during the year, at an annual rate, for an officer hired or promoted during the year. **H,h—** Also received a bonus in stock. **P,p—** Includes salary at an annual rate for an officer who left the firm, retired, or died during the year. **R,r—** Also granted stock options. **T,t—** Stock options exercised during the year. **V,v—** Includes cash value of award in stock. Footnotes dealing with long-term compensation appear immediately after the compensation figure reported for each executive. **(†)—** Long-term compensation is included in the remuneration total reported to American Banker by the banking firm, who was unable or unwilling to remove that component from the total. **(*)—** Executive also received a long-term compensation award, which is not included in the remuneration total shown.

Executive remuneration, as defined by American Banker, is total compensation — whether current or deferred — paid or credited for services during 1986 to the two highest paid officers of the organization. **Included are the following:** salary, bonus and incentive payments, profit sharing, and all other remuneration such as insurance premiums, club membership fees, and tax service fees paid by the corporation for the executive. **Excluded are the following:** pension plan payments; retirement plan payments or accruals; stock options exercised; stock appreciation rights; and contingent long-term bonus payments which are based on the company's performance for a period greater than one year. The American Banker ranking is based on total remuneration paid to the top two executives of the company. The corporation's rankings for both 1986 and 1985 are shown to the left of the corporation's name. Total remuneration for the top two executives, for both 1986 and 1985, is reported to the nearest dollar in the column entitled **"Top Executive Remuneration".** The compensation paid for executives number one and number two for both 1986 and 1985 appear in the column entitled **"Individual Remuneration."** All footnotes that are relevant to the compensation figures reported for each executive— except those dealing with long-term incentive awards— appear in the column labeled **"Notes".** Footnotes which refer to 1986 data are capitalized and footnotes referring to 1985 data are lower case. The titles shown for the executives are those for which they received compensation, excluding directorships. **Title abbreviations:** CAO— Chief Accounting Officer; CEO— Chief Executive Officer; CEx— Chairman of the Executive Committee: Ch— Chairman of the Board; CM— Chairman of the Management Committee; COO— Chief Operating Officer; DCh— Deputy Chairman of the Board; EVP— Executive Vice President; HC— Holding Company; Pr— President; Sec— Secretary; SE— Sector Executive; SEVP—Senior Executive Vice President; SrCh—Senior Vice Chairman of the Board; Tr— Treasurer; VC— Vice Chairman; and VP— Vice President. **NOTES: G,g—** Includes latest salary during the year, at an annual rate, for an officer hired or promoted during the year. **H,h—** Also received a bonus in stock. **P,p—** Includes salary at an annual rate for an officer who left the firm, retired, or died during the year. **R,r—** Also granted stock options. **T,t—** Stock options exercised during the year. **V,v—** Includes cash value of award in stock. Footnotes dealing with long-term compensation appear immediately after the compensation figure reported for each executive. **(†)—** Long-term compensation is included in the remuneration total reported to American Banker by the banking firm, who was unable or unwilling to remove that component from the total. **(*)—** Executive also received a long-term compensation award, which is not included in the remuneration total shown.

(*)—If the amount of long-term incentive pay is unavailable, executives are listed in order of total compensation for 1986. American Banker defines **long-term incentive pay** as contingent compensation based on the executive's performance over an extended period of time greater than one year— generally two or three years. For this reason, American Banker asked banking firms to exclude long-term compensation when reporting executive remuneration for services rendered in 1986. For the purposes of this table, American Banker defines **total compensation** for 1986 as the sum of remuneration for 1986 services plus long-term incentive pay. (‡)—All long-term incentive pay was deferred. (†)—Firm did not break out long-term incentive pay from remuneration attributable to 1986 services only, therefore, long-term incentive pay is included in the 1986 remuneration total. (★)—The dollar amount of long-term incentive pay was not available, therefore the total remuneration figure shown does not include this long-term incentive pay. **Remun. Rank** is the rank based on the combined remuneration paid to the firm's top two executives for services rendered in 1986.

New England Banks Big Deposit Gainers

Farm, Energy States Were Losers in 1986

By THERESIA TREPEL

American Banker
TOP 5,000 BANKS

States with Largest Deposit Changes

Dec. 31, 1985 to Dec. 31, 1986

Top 5 Gainers	% Incr.	Top 5 Losers	% Decr.
1. New Hampshire	42.0	1. Oklahoma	12.4
2. Rhode Island	35.8	2. North Dakota	5.6
3. Vermont	29.4	3. Texas	4.3
4. Massachusetts	26.0	4. Wyoming	4.2
5. Connecticut	25.7	5. Idaho	1.8

NEW YORK — Banks in New England scored the largest gains in deposits last year, while the banks in the energy-producing and Farm Belt states suffered the largest losses.

These are some of the findings of the *American Banker's* annual listing of the top 5,000 U.S. commercial banks, published today. The banks are ranked by total deposits on Dec. 31, 1986. They are listed by state and by city, both in alphabetical order. Within each city, the banks are listed in order of deposit size.

New England's robust economy was the main reason for the strong deposit growth for banks in that region. Over the past three years, the average annual unemployment rate in New England was only 5%, compared with 7.8% for the nation.

The decline in deposits at the banks in the energy-producing states and in the Farm Belt reflects the troubled economies of those regions. Over the past three years, falling oil prices have resulted in a sharp rise in problem loans in the energy-related and real estate loan portfolios of banks in the energy-producing states. In the farm states, slumping prices for agricultural commodities over the past five years have created serious problems for many of the banks.

The top five states in bank deposit growth last year were all in New En-

House's $5 Billion FSLIC Rescue Package Sets Stage for Negotiations with Senate

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — In approving a $5 billion rescue package for the Federal Savings and Loan Insurance Corp. Tuesday night, the House set the stage for negotiations with the Senate over legislation that would also ban limited-service banks and impose a moratorium on new bank powers.

A Treasury Department lobbyist repeated earlier warnings that the $5 billion plan is inadequate and would probably be vetoed by President Reagan. The likelihood of a veto would increase, the Treasury lobbyist said, if House-Senate conferees retain the bill's forbearance language and add Senate-passed measures on nonbank banks and new bank powers.

In a five-hour session that stretched into the night, the House voted 258-153 to reject a Treasury Department proposal to permit FSLIC to raise up to $15 billion over five years, approving instead a $5 billion, two-year plan.

The House action, which stunned almost all observers, deprives Senate Banking Committee Chairman William Proxmire of at least one bargaining chip in his battle to win approval of a ban on nonbank banks.

The Senate has approved a $7.5 billion FSLIC rescue package. Mr. Proxmire could have traded the higher
